Part I Invariants of Behavior

1	Introduction	3
1.1	Variation and Constancy in Neurobiology and Behavior	3
1.2	Argument Outline	5
1.2.1	Part I: Invariants and Invariants of Behavior	5
1.2.2	Models and Dynamical Systems	6
1.2.3	Part II: The Organism and Its World	6
1.2.4	Convergent Evolution of Behavioral Traits	7
1.2.5	Modular Organization	7
1.2.6	Concept Duals	8
	References	9
2	Invariances in Theory	11
2.1	Invariants in Physics and Mathematics	11
2.1.1	Invariants Are That Which Remains When Something Else Changes	11
2.1.2	Theoretical Invariants: Speed of Light, Planck's Constant	11
2.1.3	Theoretical and Relational Invariants: Energy	12
2.1.4	Empirical and Relational Invariants: Law of Gases	12
2.1.5	Context-Dependent Invariances: Sum of Internal Angles of the Triangle	13
2.1.6	Invariants Prefigure Theories	14
2.2	Invariants in Biology	14
2.2.1	Biology Borrowed Invariants from Physics and Mathematics	14
2.2.2	Invariants in Biology Are Context-Dependent	14
2.2.3	Three Examples: Life, Form, and Behavior	15
2.2.4	Ontogeny Needs the Environment	17
2.2.5	Development and Biophysics	17
2.2.6	Evolution Operates on Organisms, Not on Genes	18
2.2.7	Genes as Invariants of Species Identity	19

2.2.8	Invariants in Biology: Only Within Narrow Contextual Boundaries	19
2.2.9	Genetic Triggers Do Not Build an Organism	19
2.3	Invariants of Behavior	20
2.3.1	What Is an Invariant of Behavior?	20
2.3.2	Genes as Invariants of Behavior	20
2.3.3	Genes Are Untenable as Invariants of Behavior, for They Are a Diluted Cause	20
2.3.4	Neuroanatomy: Invariant Connections Between Architecture and Behavior	21
2.3.5	Architectonic Invariances	22
2.3.6	Some Features of Gross Anatomy Can Be Traced to Behaviors	24
2.3.7	Connections Between Anatomy and Function Do Not Always Exist	25
2.3.8	Neuroanatomical Variation and Constancy of Function	25
2.3.9	One to Very Many Mappings from Anatomy to Function	26
2.3.10	Requirements for an Invariant of Behavior	26
2.3.11	Cybernetics, Reafference, and Sensorimotor Loops	28
2.3.12	Schema Theory and Functional Overlays	31
2.3.13	Behavioral Function and Invariants of Behavior	34
2.4	Conclusion	36
2.5	Summary	37
	References	38
3	Empirical Assessments of Invariance	41
3.1	Empirical Assessments of Invariance	41
3.1.1	Invariants in Neuroscience	41
3.1.2	A Brief Typology of Function and Invariance in Neuroscience	42
3.2	The Measurement of Neural Activity	44
3.2.1	Whatever Is Seen, Is Seen Through Lenses	44
3.2.2	Contentions on the Measurement of Brain and Behavioral Function	44
3.2.3	Scope of Measurement Tools and Analysis Methods	45
3.2.4	Oscillations and Potentials: EEG	45
3.2.5	Function Localization: fMRI	48
3.2.6	Brain Wiring: DTI and Diffusion Spectrum Imaging	51
3.2.7	Electrophysiology: Single Unit Recordings	53
3.2.8	Empirical Methods and the Language of Explanation	55
3.3	Sources of Variation	55
3.3.1	Instrumental Sources of Variation	55
3.3.2	Repeatability and Variation in Different Levels	57
3.3.3	Sources of Variation	58

3.4	Conclusions.....	58
3.4.1	Partial Pictures	58
3.4.2	More Epistemological Contentions	59
3.5	Summary.....	60
	References.....	60
4	Modeling and Invariance	63
4.1	Invariance and Computational Models	63
4.1.1	Shared Invariant Rules from Natural Patterns	63
4.1.2	Dynamical Neural Patterns.....	66
4.2	Computational Models of Neural Invariance	68
4.2.1	Constancy and Variability in Modeling.....	68
4.2.2	Models and Invariance in Computational Neuroscience	69
4.2.3	Hebbian Plasticity	69
4.2.4	Kohonen's Self-Organizing Maps	70
4.2.5	Backpropagation: Gradient Descent Methods.....	72
4.2.6	Hopfield Networks.....	73
4.2.7	Decorrelation Principles.....	74
4.3	Conclusion	77
4.3.1	Invariants and the Structure of the World.....	77
4.3.2	Constancy and Variability in Modeling.....	78
	References.....	79
5	Dynamical Systems and Convergence	81
5.1	Introduction.....	81
5.1.1	Previous Conclusions.....	81
5.1.2	Dynamical Systems Theory as an Integrative Framework	82
5.1.3	Outline	83
5.2	Dynamical Systems Vocabulary	84
5.2.1	Dynamical Systems Basic Terminology	84
5.2.2	Coupled Dynamical Systems and Interfaces	88
5.3	A Motor Act, as Coupled Dynamical Systems.....	89
5.3.1	Integrating Levels.....	92
5.4	Convergence in the Neuromuscular Junction	93
5.4.1	Convergent Level Crossing.....	93
5.5	Conclusion	97
5.5.1	Convergence and Level Crossing	97
5.6	Summary.....	98
	References.....	98
6	Neurons, Models, and Invariants	101
6.1	Neurons to Models	101
6.1.1	The History of the Models of the Action Potential	102

6.1.2	The Hodgkin–Huxley Model Illustrates How Variability Converges to Constancy	106
6.1.3	Categories Emerge	108
6.2	Network Models	111
6.2.1	Difficulties with the Hodgkin–Huxley Model	111
6.2.2	A General Template To Build a Network Model	112
6.2.3	Parameterizing Structure to Analyze Dynamics	113
6.2.4	Properties of Units and Properties of the System	113
6.3	Recurrent Neural Network Models	114
6.3.1	Assumptions	114
6.3.2	Discussion of Assumptions	115
6.3.3	Fair Assumptions	117
6.4	Conclusion	117
6.4.1	The Staggering Complexity of the Neuron	117
6.4.2	Neurons, Networks, and Organismic Behavior	118
6.5	Addendum: Level Crossing in Models	119
	References	120

Part II Neurodynamics of Embodied Behavior

7	Neurodynamics and Evolutionary Robotics	125
7.1	Crash Course on the Neurodynamics of Recurrent Neural Networks	125
7.1.1	Varieties of Neurodynamics	125
7.1.2	Definitions	127
7.1.3	Neurodynamics and Attractors	135
7.2	Evolutionary Robotics at a Glance	136
7.2.1	Neurodynamics and Evolutionary Robotics	136
7.2.2	From Evolution of Organisms to Evolutionary Algorithms	136
7.2.3	Assumptions of an Evolutionary Robotics Problem	137
7.2.4	Structural Evolution and Simulation	138
7.3	Conclusion	139
	References	139
8	Attractor Landscapes and the Invariants of Behavior	141
8.1	Introduction	141
8.1.1	Outlook	141
8.1.2	Definitions	145
8.2	Toy Problem in Active Tracking	147
8.3	Methods	148
8.3.1	Problem Description	148
8.3.2	Challenges for the Tracker	150
8.3.3	Convergence and Motor Projections of Attractors	151
8.4	Results	152
8.4.1	Tracking Behavior Across Attractors	152

8.4.2	Solutions	152
8.4.3	Analysis of Dynamical Entities Generating Behavior	153
8.4.4	Convergent Activity and Equivalence of Attractors.....	153
8.4.5	Features of Evolved Attractor Landscapes	154
8.4.6	Attractor Shapes and Action	159
8.5	Discussion	163
8.5.1	Structure–Attractor Landscape–Function	163
8.5.2	Invariants of Behavior	163
8.5.3	Explanations of Functional Behavior: Negative Feedback.....	166
8.5.4	Behavioral Function Demands a Holistic Description	169
8.6	Linking Section: Convergent Landscapes	170
8.6.1	Direct Association Between Dynamics and Behavior	170
	Appendix I: Learning as Deforming Attractor Landscapes	172
	Appendix II: Related Work	173
	References.....	174
9	Convergent Evolution of Behavioral Function	177
9.1	Convergent Evolution	177
9.1.1	Outlook.....	177
9.2	Preliminaries.....	178
9.2.1	Is Evolution Gradual or Punctuated?	178
9.2.2	The Moment of Invention of Function.....	179
9.2.3	Neutral Mutation and Appearance of Function	180
9.2.4	Convergent Evolution Controversy	182
9.3	Evolutionary Phenomena in Evolution of Tracking and of Following	186
9.3.1	Invariance Organized Through Orderings and Selection ...	186
9.3.2	Gradual Improvement in Evolution of Simple Tracking....	187
9.3.3	Extensions to the Experiment on the Evolution of Tracking	192
9.4	Discussion: Convergent Evolution and Instinct	201
9.4.1	Convergent Evolution of Attractor Landscapes	201
9.4.2	Instinct: Convergent Evolution of Functional Behavior ...	202
9.5	Constancy and Variability in Structure and Function	203
9.5.1	Aspects of Constancy	204
9.5.2	Sources of Variability	206
9.6	Summary.....	208
9.6.1	Convergent Function and Invariants of Behavior	208
9.7	Linking Section: Evolution and Modularity	209
9.7.1	Functional Selection of Modular Structures and Dynamics.....	210
	References.....	211

10	Neural Communication: Messages Between Modules	213

Invariants of Behavior

Constancy and Variability in Neural Systems

Negrello, M.

2011, XX, 252 p., Hardcover

ISBN: 978-1-4419-8803-4
