Nonproduct Quadrature Grids: Solving the Vibrational Schrödinger Equation in 12d	1
Gustavo Avila and Tucker Carrington Jr.	
1	Introduction
2	Standard Quadratures
3	Calculations in Normal Coordinates
4	Potential Matrix-Vector Products
5	Application of Smolyak to CH ₃ -CN
6	Conclusion
	References
Multi-Photon Single and Double Ionization of Complex Atoms by Ultrashort Intense Laser Pulses	13
K. Bartschat, X. Guan, C.J. Noble, B.I. Schneider, and O. Zatsarinny	
1	Introduction
2	Computational Approach
3	Example Results
3.1	Multiphoton Single-Ionization of Neon
3.2	Multiphoton Single-Ionization of Argon
3.3	Two-Color Two-Photon Double Ionization of Helium
4	Summary and Outlook
	References
Correlated Electron-Nuclear Motion Visualized Using a Wavelet Time-Frequency Analysis	23
André D. Bandrauk, Szczepan Chelkowski, and Huizhong Lu	
1	Introduction
2	Computational Details
3	Correlations in the Power Spectra of Electron and Protons
4	Visualization of the Electron Returns Using the Time Profiles of Electron and Proton Harmonics

5	Conclusion	31
	References	35
A Theory of Dynamic Imaging of Coherent Molecular Rotations by High Harmonic Generation		37
F.H.M. Faisal and A. Abdurrouf		
1	Introduction	37
2	Theoretical Formulation	39
2.1	Wavefunction of the Interacting System	39
2.2	HHG Amplitude and Dipole Expectation Value	41
2.3	Formulas of HHG Signals for N ₂ , O ₂ and CO ₂	43
3	Applications and Discussions	45
4	Summary	53
	References	53
The <i>R</i>-matrix Calculations of Orientation and Coulomb Phase Effects in Electron–Molecule (Re-)Collisions		55
Alex G. Harvey and Jonathan Tennyson		
1	Introduction	55
2	General Considerations	56
3	Results for Molecular Hydrogen	59
4	Results for Carbon Dioxide	64
5	Conclusions	68
	References	69
Visual Analysis of Quantum Physics Data		71
Hans-Christian Hege, Michael Koppitz, Falko Marquardt, Chris McDonald, and Christopher Mielack		
1	Introduction	71
2	Image Sciences and Visualization	72
2.1	The Value of Images	72
2.2	Image Sciences	73
2.3	Data Visualization	74
3	Visualization Techniques for Quantum Data	76
3.1	Standard Visualization Techniques	76
3.2	Low-Dimensional Data	76
3.3	Multidimensional Data	79
4	Two Visualization Examples from Quantum Research	81
4.1	Depiction of Coupled Electron and Nuclei Dynamics in H ₂ ⁺	81
4.2	Visualization of Data from a 3D Simulation of High-Harmonic Generation	82
5	Conclusion	85
	References	86

Theory of Dynamic Imaging of Molecules with Intense Infrared Laser Pulses	89
C.D. Lin, Anh-Thu Le, and Zhangjin Chen	
1 Introduction	89
2 Theoretical Tools for Studying Atoms and Molecules in Strong Fields	91
2.1 Solution of the Time-Dependent Schrödinger Equation ..	91
2.2 Strong Field Approximation	93
2.3 Laser-Free Elastic Scattering Theory	93
2.4 Quantitative Rescattering Theory	95
2.5 The Rescattering Electron Wave Packet	96
2.6 High-Order Harmonic Generation	98
2.7 Nonsequential Double Ionization Due to the Direct (e, 2e) Collision Processes	100
2.8 Nonsequential Double Ionization Due to the Indirect Excitation-Tunneling Ionization Processes	102
2.9 Laser-Induced Medium Energy Electron Diffraction of Molecules	103
3 Summary	105
References	106
 <i>Ab Initio</i> Methods for Few- and Many-Electron Atomic Systems in Intense Short-Pulse Laser Light	107
M.A. Lysaght, L.R. Moore, L.A.A. Nikolopoulos, J.S. Parker, H.W. van der Hart, and K.T. Taylor	
1 Introduction	108
2 Time Propagation Using Taylor Series and Arnoldi Propagator Methods	109
3 Finite-Difference Grid Methods	111
3.1 Mixed Finite-Difference and Basis Set Techniques for Spatial Variables in Spherical Geometry with Application to Laser-Driven Helium	112
4 <i>R</i> -Matrix Basis Set Techniques for Spatial Variables in Spherical Geometry with Application to Multi-Electron Atoms	116
4.1 The RMB Approach	117
5 Mixed Finite-Difference and <i>R</i> -Matrix Basis Set Technique for Spatial Variables in Spherical Geometry with Application to Multi-Electron Atoms	120
5.1 Outer Region	121
5.2 Inner Region	124
5.3 Results	128
6 Conclusion	131
References	132

Strong-Field Ionization of Molecules: Simple Analytical Expressions 135

Ryan Murray, Serguei Patchkovskii, Olga Smirnova, and Misha Yu. Ivanov

1	Introduction	135
2	General Approach	137
3	Simple Analytical Expressions	139
4	Examples	143
5	Conclusion: Extension to Low-Frequency Laser Fields	144
	References	146

Recent Advances in Computational Methods for the Solution of the Time-Dependent Schrödinger Equation for the Interaction of Short, Intense Radiation with One and Two Electron Systems: Application to He and H_2^+ 149

Barry I. Schneider, Johannes Feist, Stefan Nagele, Renate Pazourek, Suxing

Hu, Lee A. Collins, and Joachim Burgdörfer

1	Introduction	150
