Contents

1 Some Fundamental Aspects of Fluid Mechanics over Microscopic Length Scales 1
Jeevanjyoti Chakraborty and Suman Chakraborty

2 Scaling Laws 61
Amitabha Ghosh

3 Modeling of Two-Phase Transport Phenomena in Porous Media: Pore-Scale Approach 95
Puneet K. Sinha and Partha P. Mukherjee

4 Micro/Nano Mechanics of Contact of Solids 151
M.S. Bobji, U.B. Jayadeep, and K. Anantheshwara

5 Mechanics of Peeling of a Flexible Adherent Off a Thin Layer of Adhesive 171
Animangsu Ghatak

6 Liquid Thin Film Hydrodynamics: Dewetting and Pattern Formation 193
Rabibrata Mukherjee

7 Electrodics in Electrochemical Energy Conversion Systems: A Mesoscopic Formalism 217
Partha P. Mukherjee and Qinjun Kang

Index 259
