Volume 1

Part 1: Geometry

Commentary: Oded Schramm: From circle packing to SLE, by Steffen Rohde. To appear in <i>Ann. Probab.</i> Reprinted with permission of the Institute of Mathematical Statistics	3
O. Schramm. Illuminating sets of constant width. <i>Mathematika</i> Vol. 35 No. 2, 180–189 (1988). Reprinted with permission of The London Mathematical Society	47
O. Schramm. On the volume of sets having constant width. <i>Israel J. Math.</i> Vol. 63 No. 2, 178–182 (1988). Reprinted with permission of Hebrew University Magnes Press	57
O. Schramm. Rigidity of infinite (circle) packings. <i>J. Amer. Math. Soc.</i> Vol. 4 No. 1, 127–149 (1991). Reprinted with permission of the American Mathematical Society	63
O. Schramm. How to cage an egg. <i>Invent. Math.</i> Vol. 107 No. 3, 543–560 (1992). Reprinted with permission of Springer Science+Business Media	87
Zheng-Xu He and O. Schramm. Fixed points, Koebe uniformization and circle packings. <i>Ann. of Math.</i> (2) Vol. 137 No. 2, 369–406 (1993). Reprinted with permission of Princeton University and the Institute for Advanced Study	105
Zheng-Xu He and O. Schramm. Hyperbolic and parabolic packings. <i>Discrete Comput. Geom.</i> Vol. 14 No. 2, 123–149 (1995). Reprinted with permission of Springer Science+Business Media	143
O. Schramm. Circle patterns with the combinatorics of the square grid. <i>Duke Math. J.</i> Vol. 86 No. 2, 347–389 (1997). Reprinted with permission of Duke University Press. An electronic version is available at doi: 10.1215/S0012-7094-97-08611-7	171
Zheng-Xu He and O. Schramm. The C_∞ -convergence of hexagonal disk packings to the Riemann map. <i>Acta Math.</i> Vol. 180 No. 2, 219–245 (1998). Reprinted with permission of Springer Science+Business Media	215
M. Bonk and O. Schramm. Embeddings of Gromov hyperbolic spaces. <i>Geom. Funct. Anal.</i> Vol. 10 No. 2, 266–306 (2000). Reprinted with permission of Springer Science+Business Media	243

Part 2: Noise Sensitivity

Commentary: Oded Schramm's contributions to noise sensitivity, by Christophe Garban. To appear in <i>Ann. Probab.</i> Reprinted with permission of the Institute of Mathematical Statistics	287
I. Benjamini, G. Kalai, and O. Schramm. Noise sensitivity of Boolean functions and applications to percolation. <i>Inst. Hautes Études Sci. Publ. Math.</i> No. 90, 5–43 (1999). Reprinted with permission of Institut Des Hautes Études Scientifiques	351
O. Schramm and J. E. Steif. Quantitative noise sensitivity and exceptional times for percolation. <i>Annals of Mathematics</i> , Pages 619–672 from Volume 171 (2010), Issue 2. Reprinted with permission of Princeton University and the Institute for Advanced Study	391
C. Garban, G. Pete, and O. Schramm. The Fourier spectrum of critical percolation. <i>Acta Math.</i> 205 (2010), 19–104. Reprinted with permission of Springer Science+Business Media	445

Part 3: Random Walks and Graph Limits

I. Benjamini and O. Schramm. Recurrence of distributional limits of finite planar graphs. <i>Electron. J. Probab.</i> Vol. 6, No. 23, 13 pp. (electronic) (2001). Reprinted with permission of the Institute of Mathematical Statistics	533
O. Angel and O. Schramm. Uniform infinite planar triangulations. <i>Comm. Math. Phys.</i> Vol. 241 No. 2–3, 191–213 (2003). Reprinted with permission of Springer Science+Business Media	547
O. Schramm. Compositions of random transpositions. <i>Israel J. Math.</i> Vol. 147, 221–243 (2005). Reprinted with permission of Hebrew University Magnes Press	571
Y. Peres, O. Schramm, S. Sheffield, and D. B. Wilson. Tug-of-war and the infinity Laplacian. <i>Journal of the American Mathematical Society</i> 22(1):167–210, (2009). Reprinted with permission of Yuval Peres	595
O. Schramm. Hyperfinite graph limits. <i>Electron. Res. Announc. Math. Sci.</i> Vol. 15, 17–23 (2008). Reprinted with permission of the American Institute of Mathematical Sciences	639

Volume 2

Part 4: Percolation

Commentary: Percolation beyond \mathbb{Z}^d: The contributions of Oded Schramm, by Olle Häggström. To appear in <i>Ann. Probab.</i> Reprinted with permission of the Institute of Mathematical Statistics	649
I. Benjamini and O. Schramm. Percolation beyond \mathbb{Z}^d , many questions and a few answers. <i>Electron. Comm. Probab.</i> Vol. 1, No. 8, 71–82 (electronic) (1996). Reprinted with permission of the Institute of Mathematical Statistics	679
I. Benjamini, R. Lyons, Y. Peres, and O. Schramm. Critical percolation on any nonamenable group has no infinite clusters. <i>Ann. Probab.</i> Vol. 27 No. 3, 1347–1356 (1999). Reprinted with permission of the Institute of Mathematical Statistics	691

R. Lyons and O. Schramm. Indistinguishability of percolation clusters. <i>Ann. Probab.</i> Vol. 27 No. 4, 1809–1836 (1999). Reprinted with permission of the Institute of Mathematical Statistics	701
I. Benjamini and O. Schramm. Percolation in the hyperbolic plane. <i>J. Amer. Math. Soc.</i> Vol. 14 No. 2, 487–507 (electronic) (2001). Reprinted with permission of the American Mathematical Society	729
I. Benjamini, H. Kesten, Y. Peres, and O. Schramm. Geometry of the uniform spanning forest: transitions in dimensions 4, 8, 12, ... <i>Ann. of Math. (2)</i> Vol. 160 No. 2, 465–491 (2004). Reprinted with permission of Princeton University and the Institute for Advanced Study	751
I. Benjamini, G. Kalai, and O. Schramm. First passage percolation has sublinear distance variance. <i>Ann. Probab.</i> Vol. 31 No. 4, 1970–1978 (2003). Reprinted with permission of the Institute of Mathematical Statistics	779
 Part 5: Schramm-Loewner Evolution	
O. Schramm. Scaling limits of loop-erased random walks and uniform spanning trees. <i>Israel J. Math.</i> Vol. 118, 221–288 (2000). Reprinted with permission of Hebrew University Magnes Press	791
G. F. Lawler, O. Schramm, and W. Werner. Values of Brownian intersection exponents I: Half-plane exponents. <i>Acta Math.</i> Vol. 187 No. 2, 237–273 (2001). Reprinted with permission of Springer Science+Business Media	859
G. F. Lawler, O. Schramm, and W. Werner. Values of Brownian intersection exponents II: Plane exponents. <i>Acta Math.</i> Vol. 187 No. 2, 275–308 (2001). Reprinted with permission of Springer Science+Business Media	897
G. F. Lawler, O. Schramm, and W. Werner. Conformal invariance of planar loop-erased random walks and uniform spanning trees. <i>Ann. Probab.</i> Vol. 32 No. 1B, 939–995 (2004). Reprinted with permission of the Institute of Mathematical Statistics	931
S. Rohde and O. Schramm. Basic properties of SLE. <i>Ann. of Math. (2)</i> Vol. 161 No. 2, 883–924 (2005). Reprinted with permission of Princeton University and the Institute for Advanced Study	989
O. Schramm and S. Sheffield. Contour lines of the two-dimensional discrete Gaussian free field. <i>Acta Mathematica</i>, Vol. 202 No. 1, 21–137 (2009). Reprinted with permission of Springer Science+Business Media	1031
O. Schramm, S. Sheffield, and D. B. Wilson. Conformal radii for conformal loop ensembles. <i>Commun.Math.Phys.</i> 288: 43–53, (2009). Reprinted with permission of Springer Science+Business Media	1149
O. Schramm. Conformally invariant scaling limits: an overview and a collection of problems. In <i>International Congress of Mathematicians</i>. Vol. I, 513–543, Eur. Math. Soc., Zürich (2007). Reprinted with permission of the International Mathematical Union	1161
O. Schramm and S. Smirnov. On the scaling limits of planar percolation. To appear in <i>Ann. Probab.</i> Reprinted with permission of the Institute of Mathematical Statistics	1193

Selected Works of Oded Schramm

Benjamini, I.; Häggström, O. (Eds.)

2011, XLII, 1247 p. 1235 illus., Hardcover

ISBN: 978-1-4419-9674-9
