
Contents

1	Introduction	1
1.1	Spoken-Language Dialogue Systems	2
1.2	Problem Setting	6
1.3	Proposed Solution – A Logic-Based Framework	8
1.4	Document Structure	11
2	Fundamentals of Dialogue Systems	15
2.1	Introduction	15
2.2	The Structure of Discourse	17
2.3	A Hierarchical Model of Intentions	19
2.4	Collaborative Negotiation	21
2.5	Dialogue Scripts and Voice Browsers	22
2.6	Information States and Dialogue Moves	24
2.7	Concepts and Terminology	26
2.8	Systems and Architectures	27
2.8.1	Circuit Fix-It Shop	28
2.8.2	TRAINS and TRIPS	30
2.8.3	COLLAGEN	33
2.8.4	SmartKom	34
2.8.5	D'HOMME	36
2.9	Discussion	37
3	First-Order Logic	41
3.1	Introduction	41
3.2	First-Order Languages	42
3.3	Deduction	44
3.4	Model-Theoretic Semantics	45
3.5	Modelling Actions and Events in Logic	47
3.6	Finite Model Generation Using Tableaux	49
3.7	Discussion	52

4	Logic-Based Domain Modelling	55
4.1	Introduction	55
4.2	Modelling Structural Information	56
4.3	Modelling Dynamic Properties	57
4.4	A Library of Reusable Domain Theories	63
4.4.1	Basic Arithmetics	63
4.4.2	Temporal Structure	65
4.4.3	Lists	66
4.4.4	Events	68
4.4.5	Fluent Change Events	69
4.4.6	Locations	70
4.4.7	Relational Databases	71
4.4.8	Application Domains	73
4.5	Modelling the TRAINS Domain	75
4.6	Discussion	80
5	Interactive Model Generation	83
5.1	Introduction	83
5.2	Model Generation as a Reasoning Procedure	84
5.3	The Core Reasoning Process	86
5.3.1	Data Structures	87
5.3.2	The Reasoner State	88
5.3.3	The Iterative Reasoning Function	90
5.3.4	Rules of Inference	92
5.3.5	Handling Equality	94
5.3.6	Optimisation Techniques	95
5.4	The Interactive Protocol	97
5.4.1	Accessing the Proof Database	98
5.4.2	Managing Concurrent Reasoning Processes	98
5.4.3	Controlling the Reasoning Process	99
5.4.4	Accessing External Data Sources	100
5.4.5	Adapting the Search Strategy	101
5.4.6	Implementation	102
5.5	Development and Testing	102
5.5.1	Performance Tests	104
5.5.2	Test Cases	106
5.5.3	Enumerating TRAINS Models	108
5.5.4	A Sample TRAINS Test Case	109
5.5.5	A Distributed Batch Processing Architecture	112
5.5.6	Interactive Testing	113
5.6	Discussion	113

6	A Prototype Based on VoiceXML	115
6.1	Introduction	115
6.2	VoiceXML Platform	116
6.3	Accessing the Reasoning Engine from VoiceXML	117
6.4	Application Domain	119
6.5	Dialogue Design	120
6.5.1	Form Structure	121
6.5.2	A Sample Interaction	122
6.6	Discussion	124
7	Information State-Based Dialogue Management	127
7.1	Introduction	127
7.2	Collaborating on Requirements and Inferences	128
7.2.1	A Generic System Strategy	129
7.2.2	Dialogue Moves	131
7.2.3	Information State	132
7.3	Processing User Requirements	135
7.4	Answering User Questions	137
7.5	Providing Inferences	139
7.5.1	Resolving Conflicts	140
7.5.2	Dealing with System Suggestions and Alternatives	141
7.5.3	Retracting Inferences	142
7.6	Using Hypothetical Reasoning	142
7.7	Discussion	144
8	Revised Prototype and System Architecture	147
8.1	Introduction	147
8.2	Architecture Considerations	148
8.3	A Basic Black-Board Infrastructure	149
8.4	Frame-Based Surface Level	150
8.5	Refining the System Strategy	152
8.6	The Revised Prototype	153
8.6.1	Application Domain	154
8.6.2	Natural Language Understanding	155
8.6.3	Natural Language Output	156
8.7	Discussion	159
9	Conclusions and Future Directions	161
9.1	Summary	161
9.1.1	Dialogue Management Approach	163
9.1.2	Interactive Reasoning	164
9.1.3	Architecture Prototypes	165
9.2	Future Work	166

10 Additions	171
10.1 Description Logics	171
10.2 SHRDLU	172
10.3 Dialogue Systems As Proof Editors	172
10.4 Closed World Assumption	173
References	175
Index	183

Domain-Level Reasoning for Spoken Dialogue Systems

Bühler, D.; Minker, W.

2011, XIII, 185 p., Hardcover

ISBN: 978-1-4419-9727-2
