Preface	v
1 Fundamentals of Linear Algebra	1
1.1 Vectors and Matrices	1
1.1.1 Vectors	1
1.1.2 Matrices	3
1.2 Vector Spaces and Subspaces	6
1.3 Linear Transformations	11
1.4 Eigenvalues and Eigenvectors	16
1.5 Vector and Matrix Derivatives	19
1.6 Exercises for Chapter 1	22
2 Projection Matrices	25
2.1 Definition	25
2.2 Orthogonal Projection Matrices	30
2.3 Subspaces and Projection Matrices	33
2.3.1 Decomposition into a direct-sum of disjoint subspaces	33
2.3.2 Decomposition into nondisjoint subspaces	39
2.3.3 Commutative projectors	41
2.3.4 Noncommutative projectors	44
2.4 Norm of Projection Vectors	46
2.5 Matrix Norm and Projection Matrices	49
2.6 General Form of Projection Matrices	52
2.7 Exercises for Chapter 2	53
3 Generalized Inverse Matrices	55
3.1 Definition through Linear Transformations	55
3.2 General Properties	59
3.2.1 Properties of generalized inverse matrices	59

3.2.2	Representation of subspaces by generalized inverses	61
3.2.3	Generalized inverses and linear equations	64
3.2.4	Generalized inverses of partitioned square matrices	67
3.3	A Variety of Generalized Inverse Matrices	70
3.3.1	Reflexive generalized inverse matrices	71
3.3.2	Minimum norm generalized inverse matrices	73
3.3.3	Least squares generalized inverse matrices	76
3.3.4	The Moore-Penrose generalized inverse matrix	79
3.4	Exercises for Chapter 3	85
4	Explicit Representations	87
4.1	Projection Matrices	87
4.2	Decompositions of Projection Matrices	94
4.3	The Method of Least Squares	98
4.4	Extended Definitions	101
4.4.1	A generalized form of least squares g-inverse	103
4.4.2	A generalized form of minimum norm g-inverse	106
4.4.3	A generalized form of the Moore-Penrose inverse	111
4.4.4	Optimal g-inverses	118
4.5	Exercises for Chapter 4	120
5	Singular Value Decomposition (SVD)	125
5.1	Definition through Linear Transformations	125
5.2	SVD and Projectors	134
5.3	SVD and Generalized Inverse Matrices	138
5.4	Some Properties of Singular Values	140
5.5	Exercises for Chapter 5	148
6	Various Applications	151
6.1	Linear Regression Analysis	151
6.1.1	The method of least squares and multiple regression analysis	151
6.1.2	Multiple correlation coefficients and their partitions	154
6.1.3	The Gauss-Markov model	156
6.2	Analysis of Variance	161
6.2.1	One-way design	161
6.2.2	Two-way design	164

6.2.3	Three-way design	166
6.2.4	Cochran's theorem	168
6.3	Multivariate Analysis	171
6.3.1	Canonical correlation analysis	172
6.3.2	Canonical discriminant analysis	178
6.3.3	Principal component analysis	182
6.3.4	Distance and projection matrices	189
6.4	Linear Simultaneous Equations	195
6.4.1	QR decomposition by the Gram-Schmidt orthogonalization method	195
6.4.2	QR decomposition by the Householder transformation	197
6.4.3	Decomposition by projectors	200
6.5	Exercises for Chapter 6	201
7	Answers to Exercises	205
7.1	Chapter 1	205
7.2	Chapter 2	208
7.3	Chapter 3	210
7.4	Chapter 4	214
7.5	Chapter 5	220
7.6	Chapter 6	223
8	References	229
	Index	233

Projection Matrices, Generalized Inverse Matrices, and
Singular Value Decomposition

Yanai, H.; Takeuchi, K.; Takane, Y.

2011, XII, 236 p., Hardcover

ISBN: 978-1-4419-9886-6
