Part I Synoptic Reviews of Thinking in Circulatory Physiology

1 Synoptic Reviews of Cardiovascular Science from Different Approaches	3
1.1 Cardiovascular Science from a Chronological Approach	3
1.2 Cardiovascular Science from an Ideological Point of View	6
1.3 Conclusions	9
1.4 Summary	9
References	10
Appendix	11
2 The Cardiovascular System and Its Modes of Operation	13
2.1 Antiquity	14
2.1.1 Introduction	14
2.2 Mesopotamia	14
2.3 Egypt	17
2.4 Mesopotamia and Egypt After 1600 BCE	19
2.4.1 Classic	20
2.4.2 Renaissance/Contemporary	23
2.4.3 Contemporary/Future	28
2.5 Conclusions	35
2.6 Summary	36
References	36
Appendix	38

Part II Circulatory Sub-Systems

3 The Venous Systems	43
3.1 Prelude	43
3.2 Past Observations and Discussions	44

3.3	Collapse Phenomena	47
3.3.1	Uniform Collapse	47
3.3.2	Throat Formation in Steady Flow	49
3.4	Venous Pulses	54
3.4.1	Arterial and Cardiac Determinants of Venous Pressure and Flow Pulses	54
3.5	Conclusions	58
3.6	Summary	58
	References	59
	Appendix	61
4	The Heart	63
4.1	Morphology and Stimulation	63
4.2	Contraction and Relaxation	73
4.3	Cardiac Discharge and Filling	80
4.4	Coronary Blood Supply	94
4.5	Conclusions	95
4.6	Summary	95
	References	96
	Appendix	100
5	Transmission of Arterial Signals, Venous Nonlinearity, and Body Movement	105
5.1	Functions	105
5.2	Pulse Transmission	107
5.2.1	The Moens-Korteweg Formula	107
5.2.2	Refined Studies of Pulse Wave Velocity in Infinitely Long Vessels	112
5.2.3	Wave Travel in a Vessel of Finite Length	115
5.2.4	Concepts in Linear Wave Propagation	117
5.2.5	Nonlinear Pressure-Flow Relation in a Collapsible Vessel Such as a Vein	121
5.2.6	Body Movement	125
5.3	Interpretation and Reduction	127
5.3.1	Interpretation of Experimentally Observed Phenomena; Their Expansion	127
5.3.2	Reduced and Simplified Small Models	134
5.4	Conclusions	139
5.5	Summary	139
	References	140
	Appendix	144
6	The Microcirculation	157
6.1	Overt and Covert Mission	157
6.1.1	Mission	157
6.1.2	Representation of the Microvasculature	158
6.2	Properties of Small Vessels	159

6.2.1	Capillary Exchange, the Filtration Coefficient and Its Expansion	159
6.2.2	Wave Transmission and Rheology	162
6.2.3	Instability of Blood Vessels.....	165
6.3	Microcirculatory Beds and Peripheral Micropumps.....	167
6.3.1	Analysis of the Coronary Circulation.....	167
6.3.2	Vasomotion, Venomotion, and Hematocrit.....	168
6.4	Conclusions	172
6.5	Summary	173
	References.....	173
	Appendix	176
7	The Lymphatic System.....	179
7.1	Introduction	179
7.2	Operation.....	180
7.3	Conclusions	184
7.4	Summary	184
	References.....	185
	Appendix	187

Part III Impedance Defined Flow and the Closed Loop

8	The Closed System	191
8.1	The Normal Circulation.....	191
8.1.1	Introduction	191
8.1.2	The “Closed” System and Exercise.....	192
8.2	Early Descriptions of the Closed Loop.....	197
8.3	Impedance-Defined Flow	201
8.3.1	The Principle, Classification, and Isolation of Its Occurrence.....	201
8.4	Conclusions	220
8.5	Summary	221
	References.....	221
	Appendix	224
9	Maintenance of the Circulation and Impedance-Defined Flow	227
9.1	Failure of the Circulation	227
9.1.1	Basic Causes of Failure	227
9.1.2	Concepts in Fluid-Mechanical Failure.....	228
9.2	Measures to Correct Flow	230
9.2.1	The Use of Drugs	230
9.2.2	The Pacemaker and the Defibrillator	231
9.2.3	Surgical Corrections	232
9.3	Supporting Flow by a Replacement Heart or an Assist Device..	232
9.3.1	Cardiac Transplantation.....	232
9.3.2	The Enigmatic Artificial Heart	233

9.4	Impedance-Defined Flow Support (Z-Flow)	235
9.4.1	General Considerations	235
9.4.2	Cardiopulmonary Resuscitation	235
9.4.3	The Ventricular Assist Device and the Intra-aortic Balloon Pump.....	238
9.4.4	The Rocking Chair	240
9.4.5	The Foot Pump and Related Devices	240
9.4.6	Shaking the Entire System, BASH and EASE.....	241
9.4.7	Massage.....	242
9.5	Conclusions	243
9.6	Summary	243
	References.....	243
	Appendix	248
10	Circulatory Control	253
10.1	Introduction	253
10.1.1	Concept Development.....	253
10.1.2	Stimuli and Related Parameters Operating from Within and Without the Cardiovascular System... ..	254
10.2	Control of Cardiac Output and Venous Return	255
10.2.1	Control by the Heart	255
10.2.2	Control of the Heart.....	256
10.2.3	Heart Rate	256
10.2.4	Respiratory Control	258
10.2.5	Control of Pressure; Gravitational and Inertial Effects.....	260
10.2.6	Control by Peripheral Pressure Flow Relations	268
10.2.7	Cooperation Among Controls in Normals; Enhancement of Cardiac Output.....	269
10.3	The Cardiac and Thoracic Theories in Cardiopulmonary Resuscitation.....	271
10.3.1	Failure to Achieve Homeostasis	271
10.3.2	Return to Fundamentals.....	272
10.4	Notes on Selected Controls.....	274
10.5	Conclusions	275
10.6	Summary	275
	References.....	276
	Appendix	279
11	Models of Cardiovascular Subsystems Yielding the Closed Circulatory Loop: The Donders Model.....	283
11.1	General Introduction and Guide Through Symbols.....	283
11.2	Passive Time-Varying Features	286
11.3	Active Features	288

11.4	Equations for Individual Subsystems: Application to CPR Studies.....	293
11.4.1	Systemic Veins.....	293
11.4.2	The Right Heart.....	295
11.4.3	Pulmonary Arteries	298
11.4.4	Pulmonary Periphery	298
11.4.5	Pulmonary Veins.....	299
11.4.6	The Left Heart	299
11.4.7	The Systemic Arteries	301
11.4.8	The Systemic Periphery	302
11.4.9	Compartmental and Total Circulating Volume V_{ci}	303
11.4.10	The Respiratory Signal $p_{er}(t)$	304
11.4.11	Adaptation to CPR Studies.....	305
11.5	Conclusions	310
11.6	Summary	310
	References.....	311
	Appendix	313
