# Contents

**1 Overview** . . . . . 1
1.1 Motivation and Approach . . . . . 1
1.2 Main Contributions . . . . . 2
1.2.1 Adaptive Sampling Scheme for Traffic Load Measurement . 3
1.2.2 Adaptive Sampling Scheme for Flow Volume Measurement . 4
1.2.3 Analysis of Point-to-Point of Delay in an Operational Backbone . . . . . 4
1.2.4 Practical Delay Measurement for an ISP . . . . . 5
1.3 Organization . . . . . 5
References . . . . . 5

**Part I Scalable Traffic Monitoring with Packet Sampling**

**2 Load Characterization and Measurement** . . . . . 9
2.1 Introduction . . . . . 9
2.2 Related Works . . . . . 12
2.3 Sampling Problem for Traffic Load Measurement . . . . . 13
2.3.1 Bounding Sampling Errors in Traffic Load Estimation . . . . . 14
2.3.2 Optimal Sampling Probability and Limitations of Static Sampling . . . . . 16
2.4 Adaptive Random Sampling with Bounded Errors . . . . . 19
2.4.1 AR Model for Traffic Parameter Prediction . . . . . 19
2.4.2 Analysis of Errors in Traffic Load Estimation via Sampling . 25
2.5 Experimental Results . . . . . 27
2.6 Load Change Detection with Sampled Measurement . . . . . 34
2.6.1 Non-parametric On-line Change Point Detection Algorithm . 34
2.6.2 Experiments . . . . . 36
2.7 Summary . . . . . 38
References . . . . . 39

**3 Flow Characterization and Measurement** . . . . . 41
3.1 Introduction . . . . . 41
3.2 Challenges and Our Approach . . . . . 44
3.2.1 Background . . . . . 44
3.2.2 Observations on Flow Characteristics and the Impact on Packet Sampling . . . . . 44
3.2.3 Our Approach . . . . . 48
3.3 Theoretical Framework of Adaptive Random Sampling for Flow Volume Measurement . . . . . 50
3.3.1 Elephant Flow Definition and Problem Formulation . . . . . 50
3.3.2 Required Number of Samples . . . . . 52
3.3.3 Optimal Sampling Probability and Prediction of Total Packet Count . . . . . 58
3.3.4 Accuracy of Stratified Random Sampling: Statistical Properties . . . . . 60
3.3.5 Bounding Absolute Error . . . . . 62
3.4 Practical Considerations . . . . . 63
3.4.1 Flow Timeout Value . . . . . 63
3.4.2 Utility of Systematic Sampling and Random Number Generation . . . . . 64
3.5 Experimental Results . . . . . 65
3.6 Summary . . . . . 69
References . . . . . 70

**Part II Scalable Delay Monitoring with Active Probing**

**4 Analysis of Point-To-Point Delay in an Operational Backbone** . . . . . 75
4.1 Introduction . . . . . 75
4.2 Related Works . . . . . 78
4.3 Point-to-Point Delay: Definition and Decomposition . . . . . 80
4.4 Data Collection and Delay Measurement Methodology for Analysis 81
4.5 General Observations on Delay Distributions . . . . . 83
4.6 Identification of Constant Factors . . . . . 86
4.6.1 Equal-Cost Multi-Path Effect . . . . . 87
4.6.2 Minimum Path Transit Time . . . . . 90
4.7 Analysis of Variable Components . . . . . 94
4.7.1 Variable Delay and Link Utilization . . . . . 94
4.7.2 Analysis of Peaks in Variable Delay . . . . . 100
4.8 SNMP Data Exploration . . . . . 105
4.9 Summary . . . . . 108
References . . . . . 109

**5 Quantile Sampling for Practical Delay Monitoring in Internet Backbone Networks** . . . . . 111
5.1 Introduction . . . . . 111
5.2 ISP Delay Measurement: Background and Methodology . . . . . 113
5.2.1 Data . . . . . 113
5.2.2 Background . . . . . 114
5.3 Measured Delay Distributions and Their Implications . . . . . 116
5.3.1 Analysis of Measured Delay Distributions . . . . . 117
5.3.2 Metrics Definition for Practical Delay Monitoring . . . . . 121
5.4 Quantile Estimation Analysis . . . . . 126
5.5 Delay Monitoring Methodology . . . . . 132
5.5.1 Active Probing Methodology . . . . . 132
5.5.2 Validation . . . . . 133
5.6 Active vs. Passive Sampling: Overhead Comparison . . . . . 138
5.7 Summary . . . . . 142
References . . . . . 142

**6 Concluding Remarks** . . . . . 145
6.1 Summary . . . . . 145
6.2 Future Directions . . . . . 146
6.2.1 Network Jitter Analysis and Measurement Scheme . . . . . 147
6.2.2 Traffic Matrix from Packet Level Traffic Information . . . . . 147
6.2.3 Optimal Placement of Measurement Systems and Inference of a Network Performance . . . . . 147
