Preface	vii
Acronyms	xv
Notation	xvii
Conventions	xvii
General Notes	xvii
List of Symbols	xviii
List of Figures	xxiii
List of Tables	xxvii
List of Matlab Functions	xxix
List of Revisited Examples	xxxix
1 Introduction	1
1.1 Levels of Organization in Living Systems	1
1.2 Systems Biology	8
1.3 Why Stochastic Modeling? Philosophical	11
1.4 Why Stochastic Modeling? Biological	12
1.5 Stochastic Approaches	17
1.6 Outline of the Text	20
2 Biochemical Reaction Networks	23
2.1 The Notion of a Chemical Reaction	23
2.2 Networks of Reactions	24
2.3 Deterministic Description	32
2.4 The Art of Modeling	47
Problems	48
3 Randomness	53
3.1 Terminology	53
3.1.1 Representations of Measurements	54
3.1.2 Sources of Noise	55

3.2	Probability	55
3.2.1	Probability of What?	56
3.2.2	Event Space	56
3.2.3	This OR That	57
3.3	Random Variables	57
3.3.1	Average	59
3.3.2	Variance	59
3.3.3	Continuous Random Variable	60
3.3.4	This AND That	61
3.3.5	Total Law of Probability	62
3.3.6	Sum of Random Variables	63
3.3.7	Random Process	64
3.3.8	Probability Distribution	65
3.3.9	Measures of Fluctuation	67
3.3.10	Rare Events	68
3.4	The Poisson Process	69
3.4.1	Interreaction Time	70
3.4.2	Arrival Times	71
3.5	Chemical Reactions as Events	72
3.5.1	Conversion Rate	72
3.5.2	Interreaction Time	73
	Problems	74
4	Probability and Random Variables	75
4.1	Probability: A Measure	75
4.1.1	Probability Space	77
4.1.2	Conditional Probability	77
4.2	Random Variables	78
4.2.1	Discrete Random Variables	80
4.2.2	Continuous Random Variables	82
4.2.3	The Memoryless Property	85
4.2.4	Mixed-Type Random Variables	86
4.3	Random Number Generation	87
4.3.1	The CDF Inversion Method	87
4.3.2	Empirical Discrete Distribution	89
4.4	Random Vectors	90
4.5	Expectations	92
4.5.1	Multidimensional Expectations	94
4.5.2	Generating Functions	95
4.6	Stochastic Processes	100
4.6.1	Poisson Process	103
4.6.2	Birth–Death Processes	111

4.6.3	Toward Markov Processes	112
	Problems	112
5	Stochastic Modeling of Biochemical Networks	115
5.1	Stochastic Formulation	115
5.1.1	Chapman–Kolmogorov Equation	117
5.1.2	The Memoryless Property	118
5.2	Propensity as a Transition Rate	119
5.2.1	Mean Conversion Rate	120
5.2.2	Reaction as a State Transition	121
5.2.3	Propensity Rate Law	121
5.2.4	Deterministic- and Stochastic Reaction Rates	124
5.2.5	Deterministic- and Stochastic Rate Constants	125
5.3	Discrete Stochastic Simulation	129
5.3.1	Time Until the Next Reaction	129
5.3.2	Index of the Next Reaction	130
5.3.3	Gillespie Algorithm	131
5.4	Continuous Stochastic Simulation	145
5.4.1	Drift and Diffusion	145
5.4.2	Chemical Langevin Equation	147
5.5	Chemical Master Equation	155
5.5.1	The Dimensionality Curse	156
5.6	Continuous Approximations of the CME	164
5.6.1	Kramers–Moyal Expansion	164
5.6.2	System-Size Expansion	165
	Problems	169
6	The 2MA Approach	173
6.1	Absolute and Relative Concentrations	174
6.2	Dynamics of the Mean	175
6.3	Dynamics of the (Co)variance	178
6.3.1	Potential Confusions	181
6.4	Outline of the 2MA	181
	Problems	198
7	The 2MA Cell Cycle Model	201
7.1	The 2MA Equations Revisited	201
7.2	Fission Yeast Cell Cycle Modeling	203
7.2.1	The Deterministic Model	204
7.2.2	Feasibility of Gillespie Simulations	206
7.2.3	The Langevin Approach	208
7.2.4	The 2MA Model	209
7.2.5	Simulations of the 2MA Model	211

7.2.6	Concluding Remarks	219
8	Hybrid Markov Processes	221
8.1	Markov Processes	223
8.2	Derivation of the dCKE	225
8.3	Classification of Markov Processes	229
8.4	Chemical Master Equation	231
8.5	Stochastic Family Tree	232
9	Wet-Lab Experiments and Noise	235
9.1	Reviews	235
9.2	Further Reading	238
	References	245
	Glossary	261
	Index	281

Stochastic Approaches for Systems Biology

Ullah, M.; Wolkenhauer, O.

2011, XXXII, 290 p., Hardcover

ISBN: 978-1-4614-0477-4
