

Contents

1	Preliminaries	1
1.1	Words and Languages	1
1.2	K -adic Representation	2
1.3	Partial Functions	3
1.4	Graphs	4
1.5	Propositional Logic	5
1.5.1	Boolean Functions	7
1.6	Cardinality	8
1.6.1	Ordered Sets	10
1.7	Elementary Algebra	10
1.7.1	Rings and Fields	10
1.7.2	Groups	15
1.7.3	Number Theory	17
2	Introduction to Computability	23
2.1	Turing Machines	24
2.2	Turing Machine Concepts	26
2.3	Variations of Turing Machines	28
2.3.1	Multitape Turing Machines	29
2.3.2	Nondeterministic Turing Machines	32
2.4	Church's Thesis	35
2.5	RAMs	36
2.5.1	Turing Machines for RAMS	40
3	Undecidability	41
3.1	Decision Problems	41
3.2	Undecidable Problems	42
3.3	Pairing Functions	45
3.4	Computably Enumerable Sets	47
3.5	Halting Problem, Reductions, and Complete Sets	50
3.5.1	Complete Problems	52
3.6	S - m - n Theorem	53

3.7	Recursion Theorem	56
3.8	Rice's Theorem	58
3.9	Turing Reductions and Oracle Turing Machines	60
3.10	Recursion Theorem: Continued	67
3.11	References	71
3.12	Additional Homework Problems	71
4	Introduction to Complexity Theory	75
4.1	Complexity Classes and Complexity Measures.....	76
4.1.1	Computing Functions.....	79
4.2	Prerequisites	79
5	Basic Results of Complexity Theory	81
5.1	Linear Compression and Speedup	82
5.2	Constructible Functions	89
5.2.1	Simultaneous Simulation	90
5.3	Tape Reduction	93
5.4	Inclusion Relationships	99
5.4.1	Relations Between the Standard Classes	107
5.5	Separation Results.....	109
5.6	Translation Techniques and Padding	113
5.6.1	Tally Languages	116
5.7	Relations Between the Standard Classes: Continued	117
5.7.1	Complements of Complexity Classes: The Immerman–Szelepcsényi Theorem	118
5.8	Additional Homework Problems	122
6	Nondeterminism and NP-Completeness	123
6.1	Characterizing NP	124
6.2	The Class P	125
6.3	Enumerations	127
6.4	NP-Completeness	129
6.5	The Cook–Levin Theorem	131
6.6	More NP-Complete Problems	136
6.6.1	The Diagonal Set Is NP-Complete	137
6.6.2	Some Natural NP-Complete Problems	138
6.7	Additional Homework Problems	142
7	Relative Computability	145
7.1	NP-Hardness.....	147
7.2	Search Problems.....	150
7.3	The Structure of NP	153
7.3.1	Composite Number and Graph Isomorphism	157
7.3.2	Reflection	160
7.4	The Polynomial Hierarchy	161
7.5	Complete Problems for Other Complexity Classes	169
7.5.1	PSPACE	169

7.5.2	Exponential Time	173
7.5.3	Polynomial Time and Logarithmic Space	174
7.5.4	A Note on Provably Intractable Problems	178
7.6	Additional Homework Problems	178
8	Nonuniform Complexity	181
8.1	Polynomial Size Families of Circuits	184
8.1.1	An Encoding of Circuits.....	187
8.1.2	Advice Classes.....	188
8.2	The Low and High Hierarchies	191
9	Parallelism	201
9.1	Alternating Turing Machines	201
9.2	Uniform Families of Circuits	209
9.3	Highly Parallelizable Problems	213
9.4	Uniformity Conditions	216
9.5	Alternating Turing Machines and Uniform Families of Circuits...	219
10	Probabilistic Complexity Classes	225
10.1	The Class PP.....	225
10.2	The Class RP	229
10.2.1	The Class ZPP	230
10.3	The Class BPP	231
10.4	Randomly Chosen Hash Functions	237
10.4.1	Operators	239
10.5	The Graph Isomorphism Problem	242
10.6	Additional Homework Problems	246
11	Introduction to Counting Classes	247
11.1	Unique Satisfiability	249
11.2	Toda's Theorem	253
11.2.1	Results on BPP and $\oplus P$	253
11.2.2	The First Part of Toda's Theorem	257
11.2.3	The Second Part of Toda's Theorem	257
11.3	Additional Homework Problems	260
12	Interactive Proof Systems	261
12.1	The Formal Model	261
12.2	The Graph Non-Isomorphism Problem	263
12.3	Arthur-Merlin Games	265
12.4	IP Is Included in PSPACE	267
12.5	PSPACE Is Included in IP	270
12.5.1	The Language ESAT	270
12.5.2	True Quantified Boolean Formulas	274
12.5.3	The Proof.....	275
12.6	Additional Homework Problems	282

Computability and Complexity Theory

Homer, S.; Selman, A.L.

2011, XVI, 300 p., Hardcover

ISBN: 978-1-4614-0681-5
