Preface	v
Chapter 1 The Classical Theory	1
1.1 Riemann Integration	1
Exercises for § 1.1	7
1.2 Riemann–Stieltjes Integration	8
1.2.1. Riemann Integrability	9
1.2.2. Functions of Bounded Variation	12
Exercises for § 1.2	18
1.3 Rate of Convergence	20
1.3.1. Periodic Functions	20
1.3.2. The Non-Periodic Case	25
Exercises for § 1.3	27
Chapter 2 Measures	28
2.1 Some Generalities	28
2.1.1. The Idea	28
2.1.2. Measures and Measure Spaces	30
Exercises for § 2.1	36
2.2 A Construction of Measures	39
2.2.1. A Construction Procedure	39
2.2.2. Lebesgue Measure on \mathbb{R}^N	45
2.2.3. Distribution Functions and Measures	50
2.2.4. Bernoulli Measure	51
2.2.5. Bernoulli and Lebesgue Measures	55
Exercises for § 2.2	57
Chapter 3 Lebesgue Integration	62
3.1 The Lebesgue Integral	62
3.1.1. Some Miscellaneous Preliminaries	62
3.1.2. The Space $L^1(\mu; \mathbb{R})$	70
Exercises for § 3.1	71
3.2 Convergence of Integrals	73
3.2.1. The Big Three Convergence Results	74
3.2.2. Convergence in Measure	77
3.2.3. Elementary Properties of $L^1(\mu; \mathbb{R})$	82

Exercises for § 3.2	84
3.3 Lebesgue's Differentiation Theorem	87
3.3.1. The Sunrise Lemma	87
3.3.2. The Absolutely Continuous Case	89
3.3.3. The General Case	94
Exercises for § 3.3	96
Chapter 4 Products of Measures	100
4.1 Fubini's Theorem	100
Exercises for § 4.1	104
4.2 Steiner Symmetrization	106
4.2.1. The Isodiametric inequality	106
4.2.2. Hausdorff's Description of Lebesgue's Measure	108
Exercises for § 4.2	112
Chapter 5 Changes of Variable	113
5.1 Riemann vs. Lebesgue, Distributions, and Polar Coordinates	113
5.1.1. Riemann vs. Lebesgue	113
5.1.2. Polar Coordinates	117
Exercises for § 5.1	119
5.2 Jacobi's Transformation and Surface Measure	121
5.2.1. Jacobi's Transformation Formula	121
5.2.2. Surface Measure	124
Exercises for § 5.2	132
5.3 The Divergence Theorem	137
5.3.1. Flows Generated by Vector Fields	137
5.3.2. Mass Transport	139
Exercises for § 5.3	142
Chapter 6 Basic Inequalities and Lebesgue Spaces	146
6.1 Jensen, Minkowski, and Hölder	146
Exercises for § 6.1	151
6.2 The Lebesgue Spaces	153
6.2.1. The L^p -Spaces	153
6.2.2. Mixed Lebesgue Spaces	158
Exercises for § 6.2	161
6.3 Some Elementary Transformations on Lebesgue Spaces	163
6.3.1. A General Estimate for Linear Transformations	163
6.3.2. Convolutions and Young's inequality	165
6.3.3. Friedrichs Mollifiers	168
Exercises for § 6.3	171

Chapter 7 Hilbert Space and Elements of Fourier Analysis . . .	174
7.1 Hilbert Space	174
7.1.1. Elementary Theory of Hilbert Spaces	174
7.1.2. Orthogonal Projection and Bases	177
Exercises for § 7.1	183
7.2 Fourier Series	184
7.2.1. The Fourier Basis	184
7.2.2. An Application to Euler–Maclaurin	188
Exercises for § 7.2	190
7.3 The Fourier Transform	191
7.3.1. L^1 -Theory of the Fourier Transform	191
7.3.2. The Hermite Functions	194
7.3.3. L^2 -Theory of the Fourier Transform	198
Exercises for § 7.3	201
Chapter 8 The Radon–Nikodym Theorem, Daniell Integration, and Carathéodory’s Extension Theorem	203
8.1 The Radon–Nikodym Theorem	203
Exercises for § 8.1	206
8.2 The Daniell Integral	208
8.2.1. Extending an Integration Theory	209
8.2.2. Identification of the Measure	213
8.2.3. An Extension Theorem	215
8.2.4. Another Riesz Representation Theorem	217
Exercises for § 8.2	219
8.3 Carathéodory’s Method	220
8.3.1. Outer Measures and Measurability	220
8.3.2. Carathéodory’s Criterion	223
8.3.3. Hausdorff Measures	224
8.3.4. Hausdorff Measure and Surface Measure	226
Exercises for § 8.3	232
Notation	235
Index	239
