<b>Preface</b> .....	vii
<b>1 Basic Notions of Calculus on Manifolds</b> .....	1
1.1 Tangent vectors and tangent bundles .....	1
1.2 The tangent functor .....	3
1.3 Rank of a map and special maps .....	4
1.4 The rank theorem .....	6
1.5 Submanifolds .....	7
1.5.1 Submanifolds defined by equations .....	10
1.5.2 Clean intersection .....	11
1.5.3 Transverse intersection .....	13
1.6 Vector fields .....	14
1.7 Integral curves and flows .....	15
1.8 First integrals .....	17
1.9 Lie bracket .....	17
1.10 One-forms .....	18
1.11 Exterior forms .....	19
1.12 Exterior algebra .....	20
1.13 Pullback of forms .....	21
1.14 Derivations .....	22
1.15 The differential .....	22
1.16 Interior product .....	23
1.17 Lie derivative .....	24
<b>2 Relations</b> .....	27
2.1 Relations on sets .....	27
2.1.1 The transposition functor .....	28
2.2 Linear relations .....	29
2.3 Smooth relations and reductions .....	29
2.3.1 Reduction of submanifolds .....	30

<b>3</b>	<b>Symplectic Relations on Symplectic Manifolds</b>	31
3.1	Linear symplectic relations	31
3.1.1	Symplectic vector spaces	31
3.1.2	The symplectic dual functor	32
3.1.3	The symplectic polar operator	32
3.1.4	Special subspaces	33
3.1.5	Linear symplectic relations	34
3.2	Symplectic manifolds	35
3.3	Special submanifolds	37
3.4	Characteristic foliation of a coisotropic submanifold	41
3.5	Symplectic relations	43
3.6	Symplectic reductions	45
3.7	Reduction of Lagrangian submanifolds	46
3.8	Symplectic relations generated by a coisotropic submanifold	48
3.9	Symplectic background of the Cauchy problem	54
3.10	Isomorphism of symplectic reductions	55
<b>4</b>	<b>Symplectic Relations on Cotangent Bundles</b>	57
4.1	Cotangent bundles	57
4.2	The canonical symplectic structure of a cotangent bundle	59
4.3	Basic observables and canonical Poisson bracket on a cotangent bundle	62
4.4	One-forms as sections of cotangent bundles	62
4.5	Lagrangian singularities and caustics	63
4.5.1	Parametric equations	64
4.5.2	Implicit equations	66
4.5.3	Generating functions	66
4.6	Generating families and Morse families	67
4.7	Coordinate representation of generating families	70
4.8	Equivalence and reduction of generating families	71
4.9	The caustic of a Lagrangian submanifold generated by a Morse family	72
4.10	Generating families of symplectic relations	73
4.11	Generating families of symmetric relations	74
4.12	The composition of generating families	75
<b>5</b>	<b>Canonical Lift on Cotangent Bundles</b>	77
5.1	Canonical lift of submanifolds	77
5.2	Canonical lift of relations	79
5.3	Canonical lift of diagonal relations	82
5.4	Canonical lift of reductions and diffeomorphisms	84
5.5	Canonical lift of vector fields	85
5.6	Symplectic relations generated by a submanifold	86

<b>6</b>	<b>The Geometry of the Hamilton–Jacobi Equation</b>	89
6.1	The Hamilton–Jacobi equation	89
6.2	Examples of Hamilton–Jacobi equations	91
6.3	Characteristics and rays	93
6.4	Systems of rays and wave fronts	94
6.5	The Hamilton principal function	97
6.6	The Jacobi theorem	100
6.7	From a complete integral to a Hamilton principal function	103
6.8	Sources	106
6.9	Mirror-relations	108
6.10	Generating family of a mirror-relation	110
6.11	Lens-relations	115
6.12	Generating family of a lens-relation	116
6.13	Reflection and refraction	117
<b>7</b>	<b>Hamiltonian Optics in Euclidean Spaces</b>	121
7.1	The distance function	121
7.2	From wave optics to geometrical optics	128
7.3	The global Hamilton principal function for the eikonal equation	130
7.4	Generating families of systems of rays	135
7.4.1	System of rays generated by a hypersurface	136
7.4.2	System of rays generated by a point	137
7.4.3	Mirrors	137
7.4.4	The coffee cup	138
7.4.5	Concave and convex ideal lenses	142
7.5	Hamilton principal function on a space of constant negative curvature	146
<b>8</b>	<b>Control of Static Systems</b>	153
8.1	Control relations	153
8.2	Simple closed thermostatic systems	170
8.3	The internal energy	172
8.4	The ideal gas	174
8.5	The Van der Waals gas	177
8.6	Control modes	182
8.7	The Legendre transform	183
8.8	Thermostatic potentials	186
8.9	From internal energy to free energy	190
8.10	Simple open thermostatic systems	193
8.11	Composite thermostatic systems	196
8.11.1	Control volume and temperature	197
8.11.2	Control entropy and volume	204

<b>9</b>	<b>Supplementary Topics</b>	207
9.1	Regular distributions and Frobenius theorem	207
9.2	Exact Lagrangian submanifolds	211
9.3	Dual pairings	215
9.4	Lagrangian splittings and canonical bases	220
9.5	The Maslov–Hörmander theorem	223
<b>10</b>	<b>Global Hamilton Principal Functions on <math>\mathbb{S}_2</math> and <math>\mathbb{H}_2</math></b>	227
10.1	Vector calculus in the real three-space	227
10.1.1	The metric tensor and the scalar product	227
10.1.2	The volume form	229
10.1.3	The cross-product	230
10.1.4	Rotations	231
10.1.5	Symplectic structure of an orientable surface	233
10.1.6	The Poisson bracket of functions of a special kind	235
10.2	The Hamilton principal function on $\mathbb{S}_2$	236
10.3	The Hamilton principal function on $\mathbb{H}_2$	241
