

Contents

1 Resistance to Targeted Therapies As a Result of Mutation(s) in the Target.....	1
Alexis B. Cortot and Pasi A. Jänne	
2 The Dynamics of the Cell Signaling Network; Implications for Targeted Therapies	33
Daniel Gioeli	
3 Cancer Signaling Network Analysis by Quantitative Mass Spectrometry	55
Jason R. Neil and Forest M. White	
4 Development and Implementation of Array Technologies for Proteomics: Clinical Implications and Applications.....	77
Julia D. Wulfschlegel, Menawar Khalil, Joseph C. Watson, Lance A. Liotta, and Emanuel F. Petricoin III	
5 Using Phosphoflow™ to Study Signaling Events of Subpopulations Resistant to Current Therapies.....	95
Omar D. Perez	
6 Mathematical and Computational Models in Cancer	113
Sudhir Chowbina, Kevin A. Janes, Shayn M. Peirce, and Jason A. Papin	
7 Somatic Evolution of Acquired Drug Resistance in Cancer	127
John W. Pepper	
8 Interrogating Resistance to Targeted Therapy Using Genetically Engineered Mouse Models of Cancer	135
Edward Gunther	

**9 microRNA: A Potential Therapy Able to Target
Multiple Cancer Pathways 155**
Benjamin Kefas and Benjamin W. Purow

**10 Rational Combination of Targeted Agents to Overcome
Cancer Cell Resistance 171**
Yun Dai and Steven Grant

Index..... 197
