Part I Germline Developmental Potential

1	Pathways to Pluripotency: How Germ Cells Make Stem Cells	3
	Peter J. Donovan	
1.1	Introduction.....	3
1.2	Early Germ Cell Development.....	5
1.3	How It All Goes Wrong	7
1.4	Probing the Mechanisms of Pluripotency	10
1.5	Lessons from Testicular Cancer.....	15
1.6	Parallel Pathways to Pluripotency.....	20
	References.....	21
2	Pluripotent Stem Cells from the Postnatal Testis: Unlocking the Potential of Spermatogonial Stem Cells	25
	Marco Seandel, Ilaria Falciatori, and Shahin Rafi	
2.1	Introduction.....	25
2.2	The Putative Precursors: Spermatogonial Stem Cells (SSCs)	26
2.3	Molecular Features that Could Predispose SSCs to Pluripotency	27
2.4	Epigenetic Factors that Could Predispose to Pluripotency	30
2.5	Culture-Induced Pluripotency in Mice.....	31
2.6	Culture-Induced Pluripotency in Humans	36
2.7	Potential Applications of Germline-Derived Pluripotent Cells: A Comparison with ES Cells and iPS Cells	38
2.8	Conclusions.....	41
2.9	Addendum.....	42
	References.....	42
3	Making Germ Cells from Human Embryonic Stem Cells	49
	Sonya M. Schuh-Huerta and Renee A. Reijo Pera	
3.1	Introduction.....	50
3.2	The Formation and Differentiation of Gametes <i>In Vivo</i>	52
3.2.1	Germ Plasm Versus Inductive Signaling.....	52

3.2.2	The Morphological Features of Gamete Development.....	53
3.2.3	The Molecular Requirements of Germ Cell Development	55
3.3	The DAZ Gene Family.....	57
3.3.1	The Y Chromosome DAZ Genes.....	57
3.3.2	DAZ Family Genes Are Evolutionarily Conserved and Function in Gametogenesis.....	58
3.4	The Generation of Germ Cells from ES Cells <i>In Vitro</i>	62
3.4.1	Similarities Between ES Cells and Germ Cells.....	63
3.4.2	Can Human ES Cells Give Rise to Germ Cells?	64
3.4.3	Generation of Mouse Germ Cells and Gametes <i>In Vitro</i>	66
3.4.4	Generation and Isolation of Human Germ Cells <i>In Vitro</i>	68
3.5	Genetic Requirements of Making Germ Cells.....	72
3.5.1	Key Germ Cell Genes	72
3.5.2	Definitive Proof of Mature Germ Cell Formation	75
3.6	The Future: Improved Methods and Clinical Implications.....	77
3.6.1	Improving Culture Conditions for Enhanced Gamete Formation	77
3.6.2	Clinical Implications and Outlook.....	77
	References.....	79

Part II Spermatogonial Stem Cells

4	Morphometric Description of Spermatogonial Stem Cells and Expansion of Their Clonal Derivatives.....	89
	Dirk G. De Rooij	
4.1	Outline.....	90
4.2	Introduction.....	90
4.3	Scheme of Spermatogonial Multiplication and Stem Cell Renewal.....	91
4.4	Morphological Characteristics of $A_{s,pr,al}$ Spermatogonia	92
4.5	Numbers of $A_{s,pr,al}$ Spermatogonia During the Epithelial Cycle	95
4.6	Cell Cycle Characteristics of $A_{s,pr,al}$ Spermatogonia	96
4.7	The Occurrence of “False” Pairs of Spermatogonia	98
4.8	Proliferative Activity of A_s , A_{pr} , and A_{al} Spermatogonia During the Epithelial Cycle	99
4.9	Regulation of the Proliferative Activity of A_s , A_{pr} , and A_{al} Spermatogonia at the Cellular Level.....	100
4.10	Regulation of Spermatogonial Numbers.....	102
4.11	Conclusion	103
	References.....	103
5	Spermatogonial Stem Cell Transplantation and Culture.....	107
	Jonathan A. Schmidt and Ralph L. Brinster	
5.1	Introduction.....	108
5.2	Spermatogonial Stem Cell Transplantation	108
5.2.1	History	108

5.2.2	Implications	108
5.2.3	Clonality and Quantification.....	110
5.2.4	Species Specificity	110
5.2.5	Procedures and Considerations.....	111
5.3	Spermatogonial Stem Cell Culture	115
5.3.1	History	115
5.3.2	Implications	116
5.3.3	Short- Versus Long-Term Culture.....	116
5.3.4	Species	119
5.4	Summary	120
	References.....	120
6	The Cluster-Forming Activity Assay: A Short-Term In Vitro Method to Analyze the Activity of Mouse Spermatogonial Stem Cells	125
	Makoto C. Nagano and Jonathan R. Yeh	
6.1	Parallelism Between the Results of <i>In Vitro</i> and <i>In Vivo</i> SSC Assays.....	126
6.2	Advantages of the CFA Assay	128
6.3	Cautionary Issues.....	129
6.3.1	Does the CFA Assay Assess the Full Range of Stem Cell Characteristics?	129
6.3.2	Do Clusters Arise Only from SSCs?	129
6.3.3	Does the Number of Cells Placed in Culture Affect Assay Outcomes?	130
6.3.4	Can the CFA Assay Distinguish SSC Proliferation and Maintenance?	130
6.3.5	Is Cluster Number the Only Readout of the CFA Assay? ...	132
6.3.6	Other Considerations	132
6.4	Future Prospects.....	133
	References.....	133
7	Molecular Mechanisms Regulating Spermatogonial Stem Cell Fate Decisions.....	135
	Olga M. Ocón-Grove and Jon M. Oatley	
7.1	Spermatogenesis and Spermatogonial Stem Cell Biology.....	136
7.2	Extrinsic Growth Factor Regulation of SSC Self-renewal.....	139
7.2.1	GDNF	139
7.2.2	FGF2 and CSF1	141
7.3	Internal Molecular Pathways Regulating SSC Self-Renewal	141
7.3.1	GDNF-Regulated Gene Expression in Mouse SSCs	142
7.3.2	GDNF-Regulated Transcription Factors.....	143
7.3.3	Non-GDNF Regulated Transcription/Translation Factors	145
7.3.4	Transcription Factors with Putative Roles in SSC Differentiation	149

7.4	GDNF-Activated Signaling Pathways in Cultured Mouse SSCs ...	150
7.5	Summary.....	151
	References.....	153
8	Stem Cell Niche System in Mouse Spermatogenesis.....	159
	Shosei Yoshida	
8.1	Introduction	159
8.2	<i>Drosophila</i> Germline Stem Cell Niche System.....	160
8.3	Architecture of the Mouse Testis.....	162
8.4	Mouse Spermatogenic Stem Cells.....	164
8.5	Niche Microenvironment in the Mouse Testis.....	166
8.6	Molecular Mechanisms That Could Be Involved in the Niche Functions.....	169
8.6.1	Soluble Factors	169
8.6.2	FGF (Fibroblast Growth Factor) and Other Factors	171
8.7	Cell–Cell Contact and Basement Membrane Binding.....	171
8.8	Transcriptional Regulator in Somatic Cells.....	172
8.8.1	Etv5 (ets Variant Gene 5/ERM or ets-Related Molecule)	172
8.9	Conclusion.....	172
	References.....	173
Part III	Translation and Regenerative Potential of Spermatogonial Stem Cells	
9	Regenerative Potential of Spermatogenesis after Gonadotoxic Therapies	179
	Gunapala Shetty, Gensheng Wang, and Marvin L. Meistrich	
9.1	Introduction	179
9.2	Immediate and Short-Term Effects of Gonadotoxic Therapies.....	180
9.3	Stem Spermatogonial Survival– Methods	182
9.4	Stem Spermatogonial Survival-Results	183
9.4.1	Counts of Type A Spermatogonia	183
9.4.2	Assessing Stem Cell Survival by Recovery Potential	184
9.4.3	Functional Assay of Stem Cells by Transplantation.....	187
9.5	Recovery of Spermatogenesis from Surviving Stem Spermatogonia.....	187
9.6	Modulation of the Regenerative Process	191
9.7	Analysis of Interspecies Differences	194
9.8	Conclusion.....	196
	References.....	197
10	Testicular Xenografting.....	205
	Stefan Schlatt, Jose R. Rodriguez-Sosa, and Ina Dobrinski	
10.1	Introduction.....	206
10.2	Testicular Tissue Grafting: A Comparative Overview.....	207

10.3	Testicular Xenografting Using Testicular Cell Suspensions	218
10.4	Xenografting of Primate Testicular Tissue: Clinical and Experimental Perspectives	219
	References.....	222
11	Translating Spermatogonial Stem Cell Transplantation to the Clinic	227
	Brian P. Hermann and Kyle E. Orwig	
11.1	Introduction—Clinical Possibilities for Male Fertility Preservation.....	228
11.2	Primate Spermatogonial Stem Cells	231
11.3	Nonhuman Primate Model for Developing SSC Transplantation	232
11.3.1	SSC Transplantation in Rodents	232
11.3.2	Primate Testis Cell Isolation	233
11.3.3	Cryopreservation.....	234
11.3.4	Recipient Models for SSC Transplantation	236
11.3.5	Busulfan Treatment.....	236
11.3.6	Testicular Irradiation.....	238
11.3.7	Ultrasound-Guided Rete Testis Injection.....	238
11.3.8	Definitive Autologous SSC Transplants in Primates	241
11.3.9	Allogeneic SSC Transplants	241
11.4	Clinical Implications and Considerations for SSC Transplantation.....	243
11.4.1	Patient Testis Accrual	243
11.4.2	Testis Cell Isolation in the Clinic.....	244
11.4.3	Human SSC Culture	244
11.4.4	Risk of Reintroducing Malignant Cells During SSCs Transplants.....	245
11.4.5	Ethical Considerations	246
11.5	Conclusions.....	248
	References.....	248
	Index.....	255
