## Part I    Impact on Product Design

<b>1</b>	<b>Geometric Tolerance Specification.....</b>	<b>3</b>
	Antonio Armillotta and Quirico Semeraro	
1.1	Introduction .....	4
1.2	From Linear to Geometric Tolerances.....	6
1.3	Description of the Product.....	9
1.3.1	Geometric Data .....	9
1.3.2	Design Requirements .....	11
1.4	General Approach to Tolerance Specification.....	17
1.4.1	Empirical Specification Rules.....	17
1.4.2	Classification of Tolerancing Cases.....	19
1.5	Generative Specification Methods.....	23
1.5.1	Technologically and Topologically Related Surfaces .....	25
1.5.2	Degrees of Freedom .....	27
1.5.3	Mirrors .....	28
1.5.4	Function Decomposition .....	29
1.5.5	Positioning Table .....	31
1.5.6	Variational Loop Circuit .....	32
1.6	Conclusions .....	33
	References.....	34
<b>2</b>	<b>Geometric Tolerance Analysis .....</b>	<b>39</b>
	Wilma Polini	
2.1	Introduction .....	39
2.2	The Reference Case Study.....	42
2.3	The Vector Loop Model .....	44
2.3.1	Results of the Case Study with Dimensional Tolerances.....	47
2.3.2	Results of the Case Study with Geometric Tolerances ....	50

2.4	Further Geometric Tolerance Analysis Models.....	54
2.4.1	The Variational Model.....	54
2.4.2	The Matrix Model.....	56
2.4.3	The Jacobian Model.....	58
2.4.4	The Torsor Model.....	59
2.5	Comparison of the Models.....	61
2.6	Guidelines for the Development of a New Tolerance Analysis Model.....	65
2.7	Conclusions.....	67
	References.....	67

## Part II Impact on Product Quality Inspection

<b>3</b>	<b>Quality Inspection of Microtopographic Surface Features with Profilometers and Microscopes.....</b>	<b>71</b>
	Nicola Senin and Gianni Campatelli	
3.1	Introduction.....	72
3.2	Profilometers and 3D Microscopes for Microtopography Analysis.....	74
3.2.1	Stylus-based Profilometers.....	75
3.2.2	Performance and Issues of Measuring with Stylus-based Profilometers.....	79
3.2.3	Optical Profilometers and Optical 3D Microscopes.....	82
3.2.4	Performance and Issues of Measuring with Optical Profilometers and Microscopes.....	92
3.2.5	Nonoptical Microscopes.....	94
3.2.6	Performance and Issues of Measuring with Nonoptical Microscopes.....	96
3.2.7	Scanning Probe Microscopes.....	98
3.2.8	Performance and Issues of Measuring with Scanning Probe Microscopes.....	100
3.3	Application to the Inspection of Microfabricated Parts and Surface Features.....	101
3.3.1	Aspects and Issues Peculiar to the Application of Profilometers and Microscopes.....	102
3.3.2	Aspects and Issues That Are Shared with Quality Inspection of Average-sized Mechanical Parts with Conventional Instruments.....	105
3.4	Conclusions.....	106
	References.....	107
	Standard under Development.....	110

<b>4</b>	<b>Coordinate Measuring Machine Measurement Planning .....</b>	<b>111</b>
	Giovanni Moroni and Stefano Petrò	
4.1	Introduction .....	112
4.1.1	What Is a CMM? .....	112
4.1.2	Traceability of CMMs .....	116
4.1.3	CMM Inspection Planning .....	118
4.2	Measurement Strategy Planning .....	119
4.3	Sampling Patterns .....	123
4.3.1	Blind Sampling Strategies .....	123
4.3.2	Adaptive Sampling Strategies .....	129
4.3.3	Manufacturing-signature-based Strategies .....	132
4.3.4	Effectiveness of Different Sampling Patterns: Case Studies .....	139
4.4	Sample Size Definition .....	148
4.4.1	An Economic Criterion for the Choice of the Sample Size .....	151
4.4.2	Case Studies: Roundness and Flatness .....	153
4.5	Conclusions .....	154
	References .....	155
	Standard under Development .....	158
<b>5</b>	<b>Identification of Microtopographic Surface Features and Form Error Assessment .....</b>	<b>159</b>
	Nicola Senin, Stefano Pini, and Roberto Groppetti	
5.1	Introduction .....	160
5.1.1	Scenario .....	160
5.1.2	Main Terminology and Outline of the Proposed Approach .....	161
5.2	Previous Work .....	162
5.2.1	Previous Work on Feature Identification and Extraction .....	162
5.2.2	Previous Work on Geometry Alignment and Form Error Assessment .....	163
5.3	Outline of the Proposed Approach .....	164
5.3.1	Simulated Case Study .....	164
5.3.2	Overall Schema of the Proposed Approach .....	166
5.4	Feature Identification and Extraction .....	167
5.4.1	The Main Scanning Loop .....	168
5.4.2	Template Preparation .....	168
5.4.3	Template and Candidate Region Preprocessing .....	168
5.4.4	Template and Candidate Region Comparison Through Pattern Matching .....	171
5.4.5	Some Considerations on the Sensitivity and Robustness of the Preprocessed-shape Comparison Substep .....	173
5.4.6	Final Identification of the Features .....	173

5.4.7	Feature Extraction .....	174
5.5	Nominal Versus Measured Feature Comparison .....	175
5.5.1	Coarse and Fine Alignment.....	177
5.5.2	Template and Candidate Geometry Preprocessing for Alignment Purposes .....	177
5.5.3	Coarse Rotational Alignment with Diametral Cross-section Profile Comparison.....	177
5.5.4	Fine Alignment with ICP .....	179
5.5.5	Comparison of Aligned Geometries.....	180
5.6	Validation of the Proposed Approach.....	181
5.6.1	Feature Identification and Extraction.....	182
5.6.2	Feature Alignment and Form Error Assessment .....	184
5.7	Conclusions .....	185
5.7.1	Issues Related to Feature Identification .....	185
5.7.2	Issues in Feature Alignment and Form Error Assessment .....	186
	References.....	186
	Standards under Development .....	187
<b>6</b>	<b>Geometric Tolerance Evaluation Using Combined Vision – Contact Techniques and Other Data Fusion Approaches .....</b>	<b>189</b>
	Gianni Campatelli	
6.1	Introduction to Hybrid Coordinate Measuring Machine Systems.....	189
6.1.1	Brief Description of Optical Measurement Systems .....	192
6.2	Starting Problem: Precise Data Registration .....	194
6.3	Introduction to Serial Data Integration, Data Fusion, and the Hybrid Model.....	196
6.4	Serial Data Integration Approaches.....	198
6.4.1	Serial Data Integration: Vision-aided Reverse Engineering Approach .....	198
6.4.2	Serial Data Integration: Serial Bandwidth .....	201
6.5	Geometric Data Integration Approaches .....	203
6.5.1	Geometric Approach: Geometric Reasoning .....	204
6.5.2	Geometric Approach: Self-organizing Map Feature Recognition .....	206
6.6	Data Fusion Approach.....	208
6.7	Concluding Remarks .....	211
	References.....	212
<b>7</b>	<b>Statistical Shape Analysis of Manufacturing Data .....</b>	<b>215</b>
	Enrique del Castillo	
7.1	Introduction .....	215
7.2	The Landmark Matching Problem.....	216

7.3	A Review of Some SSA Concepts and Techniques.....	222
7.3.1	Preshape and Shape Space .....	223
7.3.2	Generalized Procrustes Algorithm .....	224
7.3.3	Tangent Space Coordinates.....	228
7.4	Further Work .....	231
	Appendix: Computer Implementation of Landmark Matching and the GPA and PCA .....	233
	References.....	233

### Part III Impact on Statistical Process Monitoring

<b>8</b>	<b>Statistical Quality Monitoring of Geometric Tolerances: the Industrial Practice .....</b>	<b>237</b>
	Bianca Maria Colosimo and Massimo Pacella	
8.1	Introduction .....	237
8.2	Shewhart's Control Chart .....	238
8.2.1	Two Stages in Control Charting.....	241
8.3	Geometric Tolerances: an Example of a Geometric Feature Concerning Circularity .....	242
8.4	Control Chart of Geometric Errors .....	245
8.4.1	Control Limits of the Individuals Control Chart.....	245
8.4.2	An Example of Application to the Reference Case Study .....	246
8.5	Monitoring the Shape of Profiles.....	249
8.5.1	The Location Control Chart .....	250
8.5.2	Control Limits of the Location Control Chart.....	251
8.5.3	An Example of Application of the Location Control Chart .....	251
8.6	Conclusions .....	254
	References.....	254
<b>9</b>	<b>Model-based Approaches for Quality Monitoring of Geometric Tolerances .....</b>	<b>257</b>
	Bianca Maria Colosimo and Massimo Pacella	
9.1	Introduction .....	257
9.2	Linear Profile Monitoring.....	261
9.2.1	A Control Chart Approach to Linear Profile Monitoring.....	263
9.2.2	A Numerical Example for Linear Profile Monitoring.....	264
9.3	Profile Monitoring for Geometric Tolerances .....	269
9.3.1	Regression Model with Spatially Correlated Errors.....	270
9.3.2	The PCA-based Model.....	277
9.4	Conclusions .....	281
	References.....	282

<b>10</b>	<b>A Model-free Approach for Quality Monitoring of Geometric Tolerances</b>	285
	Massimo Pacella, Quirico Semeraro, Alfredo Anglani	
10.1	Introduction	286
10.2	An Introduction to Machine Learning	288
10.2.1	Supervised and Unsupervised Learning	289
10.2.2	Neural Networks	290
10.2.3	Supervised Learning: the MLP Model	291
10.2.4	Unsupervised Learning: the ART Model	292
10.3	Neural Networks for Quality Monitoring	294
10.3.1	Control Chart Pattern Recognition	294
10.3.2	Unnatural Process Behavior Detection	295
10.4	A Neural Network Approach for Profile Monitoring	297
10.4.1	Input and Preprocessing Stage	298
10.4.2	Training	298
10.4.3	The Method for Implementing the Neural Network	299
10.5	A Verification Study	300
10.5.1	Implementation of the Fuzzy ART Neural Network	301
10.5.2	Run Length Performance	303
10.6	Conclusions	305
	Appendix	307
	References	308
<b>11</b>	<b>Quality Monitoring of Geometric Tolerances: a Comparison Study</b>	311
	Bianca Maria Colosimo and Massimo Pacella	
11.1	Introduction	311
11.2	The Reference Case Study	314
11.2.1	The Registration of Profiles	318
11.3	Production Scenarios	320
11.4	Out-of-Control Models	322
11.5	Performance Comparison in Phase II of Process Monitoring	323
11.5.1	Production Scenario with the Random-Effect Model	325
11.5.2	Production Scenario with the Fixed-Effect Model	327
11.5.3	Overall Performance Measure	328
11.6	Conclusions	330
	References	331
