## Part I Foundations

<b>1</b>	<b>Introduction</b>	3
	Ina Koch and Falk Schreiber	
1.1	Systems Biology	4
1.2	Models and Modeling	5
1.2.1	Analysis of Models	6
1.2.2	Model Development	8
1.2.3	Model Composition	9
1.2.4	Dynamic Behavior	9
1.3	Data Resources	10
1.3.1	Repositories of Gene Expression Data	11
1.3.2	Protein–Protein Interaction Databases	11
1.3.3	Pathway Databases	12
1.4	Visualization	13
1.4.1	Visualization Methods	13
1.4.2	Systems Biology Graphical Notation	14
1.4.3	Visualization Tools	15
1.5	Petri Nets in Biology	16
1.5.1	Motivation for Using Petri Nets	16
1.5.2	Petri Nets in Biology	16
1.6	Problems	17
<b>2</b>	<b>Biochemical Fundamentals</b>	19
	Tiina Liiving, Syed M. Baker, and Björn H. Junker	
2.1	Cell Biology	19
2.1.1	Cellular Organization	20
2.1.2	Mitochondria	21
2.1.3	Plastids	22
2.2	Metabolism	23
2.2.1	Metabolic Pathways and Networks	23
2.2.2	Metabolites	24

2.2.3	Enzymes . . . . .	24
2.2.4	Enzyme Inhibition . . . . .	25
2.2.5	Central Metabolic Pathways . . . . .	29
2.2.6	Metabolic Networks . . . . .	30
2.2.7	Regulation of Metabolism . . . . .	31
2.3	Gene Expression . . . . .	32
2.3.1	Transcription . . . . .	32
2.3.2	Translation . . . . .	32
2.3.3	Gene Regulation . . . . .	34
2.3.4	Gene Regulatory Networks . . . . .	34
2.4	Signal Transduction . . . . .	34
2.4.1	Hormones and Other Signaling Molecules . . . . .	35
2.4.2	Receptors . . . . .	36
2.5	Problems . . . . .	36
<b>3</b>	<b>Petri Nets . . . . .</b>	<b>37</b>
	Wolfgang Reisig	
3.1	Introduction . . . . .	37
3.2	An Introductory Example . . . . .	38
3.2.1	Models of Substances . . . . .	38
3.2.2	Models of Reactions . . . . .	38
3.2.3	Sequentially Composed Reactions . . . . .	39
3.2.4	Quantitative Aspects . . . . .	41
3.2.5	Alternative Composition . . . . .	41
3.2.6	Modeling the Interface . . . . .	42
3.2.7	Putting it All Together . . . . .	42
3.3	The Static Structure of Petri Nets . . . . .	43
3.3.1	Places . . . . .	43
3.3.2	Transitions . . . . .	43
3.3.3	Arcs . . . . .	44
3.3.4	Markings . . . . .	44
3.3.5	Static Net Structures . . . . .	44
3.4	Dynamic Behavior of Petri Nets . . . . .	45
3.4.1	Enabled Transitions . . . . .	45
3.4.2	Steps . . . . .	45
3.4.3	Step Sequences and Reachable Markings . . . . .	46
3.4.4	The Role of Infinity . . . . .	46
3.5	Analysis Techniques for Petri Nets . . . . .	47
3.5.1	Important Properties . . . . .	47
3.5.2	The Linear Algebra of Steps . . . . .	48
3.5.3	The Matrix of a Petri Net . . . . .	48
3.5.4	Place Invariants . . . . .	49
3.5.5	Transition Invariants . . . . .	51
3.5.6	Traps . . . . .	52
3.5.7	Syphons . . . . .	52

3.5.8	The Marking Graph . . . . .	52
3.5.9	Concurrent Runs . . . . .	53
3.6	Petri Nets as a Modeling Technique for Systems Biology . . . . .	53
3.6.1	Discrete Steps . . . . .	54
3.6.2	Local Cause and Effect . . . . .	54
3.6.3	Invariance of Substance . . . . .	55
3.6.4	Other Models of Dynamic Systems . . . . .	55
3.7	References and Tools . . . . .	55
3.8	Problems . . . . .	56

## Part II Modeling Techniques

<b>4</b>	<b>Discrete Modeling</b> . . . . .	<b>59</b>
	Andrea Sackmann	
4.1	Modeling Concepts . . . . .	59
4.2	Qualitative Analysis . . . . .	62
4.3	P-invariants . . . . .	63
4.4	T-invariants . . . . .	64
4.4.1	Feasible T-invariants . . . . .	65
4.4.2	MCT-sets . . . . .	67
4.4.3	T-clusters . . . . .	68
4.4.4	Mauritius Maps . . . . .	69
4.5	Related Work . . . . .	70
4.6	Software . . . . .	71
4.7	Problems . . . . .	71
<b>5</b>	<b>Modeling Genetic Regulatory Networks</b> . . . . .	<b>73</b>
	Richard Banks, Victor Khomenko, and L. Jason Steggle	
5.1	Introduction . . . . .	73
5.2	Synchronous Models of GRNs . . . . .	75
5.2.1	Constructing a Qualitative Petri Net Model . . . . .	76
5.2.2	Tool Support . . . . .	80
5.2.3	Case Study: Nutritional Stress Response in <i>E. coli</i> . . . . .	81
5.3	Asynchronous Models of GRNs . . . . .	86
5.3.1	Signal Transition Graphs and Speed-Independent Circuits . . . . .	87
5.3.2	Refining Asynchronous Models of GRNs . . . . .	91
5.3.3	Case Study: Lysis–Lysogeny Switch in Phage $\lambda$ . . . . .	94
5.4	Related Work . . . . .	98
5.5	Summary . . . . .	99
5.6	Problems . . . . .	99
<b>6</b>	<b>Hybrid Functional Petri Net with Extension for Dynamic Pathway Modeling</b> . . . . .	<b>101</b>
	Ayumu Saito, Masao Nagasaki, Hiroshi Matsuno, and Satoru Miyano	
6.1	Introduction . . . . .	101
6.2	Pathway Modeling with Concept of Petri Net . . . . .	103

6.2.1	Petri Net (PN)	103
6.2.2	Representation of Biological Pathway	103
6.2.3	Timed Petri Net (TPN)	104
6.2.4	Continuous Timed Petri Net (CTPN)	106
6.3	Hybrid Functional Petri Net with Extension	106
6.4	Modeling MicroRNAs Double-Negative Feedback Loop in Gustatory Neurons of <i>C. elegans</i>	114
6.5	Concluding Remarks	119
6.6	Problems	119
<b>7</b>	<b>Stochastic Modeling</b>	<b>121</b>
	Ivan Mura	
7.1	Introduction	121
7.2	Basic Concepts	123
7.2.1	The Theoretical Basis of Stochastic Molecular Dynamics	123
7.2.2	SPN Modeling of Stochastic Molecular Dynamics	125
7.2.3	Beyond Pure Mass-Action	130
7.3	Methods to Determine SPN Evolution	132
7.3.1	Analytical and Numerical Approaches	134
7.3.2	Simulation Approaches	140
7.4	Examples of Modeling and Evaluation	143
7.4.1	A Biochemical Oscillator	143
7.4.2	A Protein Synthesis Network	146
7.4.3	A Gene Regulatory Network	147
7.5	Related Work	148
7.6	Summary	150
7.7	Problems	150
<b>8</b>	<b>Quantitative Analysis</b>	<b>153</b>
	Jörg Ackermann and Ina Koch	
8.1	Introduction	154
8.2	Mass Action	154
8.2.1	Zero-Order Reactions	155
8.2.2	First-Order Reactions or Unimolecular Reactions	155
8.2.3	Second-Order Reactions or Bimolecular Reactions	157
8.2.4	Reversible Mass Action or Equilibrium Reactions	158
8.2.5	Example: A Simple Predator Prey Model	159
8.2.6	Steady States	161
8.2.7	Stability Analysis	161
8.2.8	Spatial Instability	164
8.3	Michaelis–Menten Kinetics	165
8.3.1	Enzyme Kinetics with Inhibitors	167
8.4	Hill Kinetics	169
8.4.1	Neutral Binding	169
8.4.2	Cooperative Binding	172

8.5	Tool Support . . . . .	173
8.6	Problems . . . . .	176
8.6.1	Continuous Versus Discrete Modeling . . . . .	176
8.6.2	Stability Analysis of the Continuous Lotka–Volterra Model . . . . .	177
8.6.3	Stability Analysis of the Discrete Lotka–Volterra Model . . . . .	177
8.6.4	Michaelis–Menten Kinetics . . . . .	178
<b>9</b>	<b>Fuzzy Modeling . . . . .</b>	<b>179</b>
	Lukas Windhager, Florian Erhard, and Ralf Zimmer	
9.1	Introduction . . . . .	179
9.2	Methods and Concepts . . . . .	182
9.2.1	Ordinary Logic Reasoning . . . . .	183
9.2.2	Fuzzy Sets . . . . .	185
9.2.3	Fuzzy Logic Reasoning . . . . .	187
9.2.4	Application to Petri Nets . . . . .	192
9.3	Results . . . . .	194
9.3.1	Design Principles . . . . .	194
9.3.2	PNMA . . . . .	197
9.3.3	Parameter Estimation . . . . .	199
9.3.4	Application . . . . .	200
9.4	Related Work . . . . .	202
9.4.1	Common Network Motifs and Cell Cycle Model . . . . .	202
9.4.2	Comparison of Fuzzy Logic to Multi-Class Discrete Logic . . . . .	203
9.4.3	Classification of Gene Expression Data . . . . .	203
9.5	Summary . . . . .	204
9.6	Problems . . . . .	204

### Part III Biochemical Applications

<b>10</b>	<b>Topological Analysis of Metabolic and Regulatory Networks . . . . .</b>	<b>209</b>
	Stefan Schuster and Björn H. Junker	
10.1	Introduction . . . . .	209
10.2	T-invariants . . . . .	212
10.2.1	Modelling Steady States . . . . .	212
10.2.2	Minimal T-invariants and Elementary Modes . . . . .	213
10.2.3	Clustering of T-invariants . . . . .	216
10.3	P-invariants . . . . .	217
10.3.1	Definition and Biochemical Interpretation . . . . .	217
10.3.2	Algorithms and Software Tools for Computing Minimal Invariants . . . . .	219
10.4	Other Topological Properties . . . . .	220
10.5	Related Work with Concrete Biological Examples . . . . .	221
10.6	Conclusions . . . . .	223
10.7	Problems . . . . .	224

<b>11 Analysis of Dynamical Models of Signaling Networks with Petri Nets and Dynamic Graphs</b>	225
Simon Hardy and Ravi Iyengar	
11.1 Introduction	225
11.2 Methods and Concepts	227
11.2.1 From Ordinary Differential Equations to a Petri Net Model	228
11.2.2 From a Petri Net Model to an Interaction Graph	230
11.2.3 From an Interaction Graph to an Influence Graph	232
11.2.4 From an Influence Graph to Dynamic Graphs	236
11.2.5 Tool Support	238
11.3 Results	238
11.3.1 Dynamic and Function of the Regulatory Motifs	242
11.3.2 Lifetime of the Regulatory Motifs	247
11.4 Related Work	249
11.5 Summary	249
11.6 Problems	250
<b>12 A Modular, Qualitative Modeling of Regulatory Networks Using Petri Nets</b>	253
Claudine Chaouiya, Hanna Klaudel, and Franck Pommereau	
12.1 Introduction	254
12.2 Logical Modeling of Regulatory Networks	254
12.2.1 Logical Regulatory Graphs (LRGs)	255
12.2.2 Logical Functions Representation Based on Decision Diagrams	258
12.2.3 State Transition Graphs Associated to LRGs	260
12.3 P/T Petri Net Representation	261
12.3.1 Tools Support	264
12.3.2 Related Works	264
12.4 Modules, Their Composition and High-Level Petri Net Representation	264
12.4.1 Interconnecting Logical Regulatory Modules	265
12.4.2 High-Level Petri Net Representation	267
12.4.3 Implementation	269
12.5 Modeling Interconnected LRMs Using High-Level Petri Nets	270
12.5.1 Interconnecting Occurrences of the Toy LRM	270
12.5.2 The <i>Drosophila</i> Segment-Polarity Module	273
12.6 Conclusions	276
12.7 Problems	278
<b>13 A Case Study of HFPN Simulation: Finding Essential Roles of Ror Gene in the Interaction of Feedback Loops in Mammalian Circadian Clock</b>	281
Natsumi Mitou, Hiroshi Matsuno, Satoru Miyano, and Shin-Ichi T. Inouye	
13.1 Introduction	282

13.2 Modeling Molecular Circadian Oscillator in Mouse with Hybrid Functional Petri Net . . . . .	284
13.2.1 Circadian Clock Oscillator with Five Genes . . . . .	285
13.2.2 Construction of an HFPN Model . . . . .	285
13.3 Effect of the Two Interlocked Loops in Circadian Gene Regulations in Mouse . . . . .	288
13.3.1 A Problem of the Previous HFPN Model in an Oscillation Maintenance . . . . .	288
13.3.2 Modification in Parameters for Constituting Interlocked Loops . . . . .	288
13.4 Function of <i>Ror</i> in the Interlocked Model . . . . .	294
13.4.1 Introduction of <i>Ror</i> . . . . .	294
13.4.2 Inclusion of a Hypothetical Path: ROR Excites <i>Bmal</i> Only When PER/CRY Level Are Above the Threshold . . . . .	299
13.4.3 Simulation for <i>Rev-Erb</i> Knockout Mice . . . . .	302
13.5 Conclusions . . . . .	303
13.6 Problems . . . . .	304
<b>14 Prediction of Network Structure . . . . .</b>	<b>307</b>
Annegret Wagler	
14.1 Introduction . . . . .	307
14.2 Methods to Predict Network Structures . . . . .	313
14.2.1 A General Combinatorial Reconstruction Approach . . . . .	313
14.2.2 An Approach for the Case of Monotone Data . . . . .	319
14.3 Results: A Reconstruction Algorithm . . . . .	326
14.4 Related Work . . . . .	332
14.5 Summary . . . . .	334
14.6 Exercises and Solutions . . . . .	335
<b>Glossary . . . . .</b>	<b>337</b>
<b>References . . . . .</b>	<b>339</b>
<b>Index . . . . .</b>	<b>357</b>

Modeling in Systems Biology

The Petri Net Approach

Koch, I.; Reisig, W.; Schreiber, F. (Eds.)

2011, XXIV, 364 p., Hardcover

ISBN: 978-1-84996-473-9
