Part I Architectural Hypothesis and Theory

1	Overview	3
1.1	The Challenges	4
1.1.1	Energy Crisis	4
1.1.2	Energy Pollution and Human Healthy	4
1.1.3	The Greenhouse Effect	5
1.1.4	Heat Climate Change	5
1.1.5	Urban Heat Island	5
1.2	The Objectives	5
1.2.1	Energy Efficiency	6
1.2.2	Renewable Energy	6
1.2.3	The Idea of Affordability	6
1.2.4	Local Design	7
1.2.5	Durability Sustainable Design	7
1.2.6	Human Comfort	7
1.2.7	Healthy Human Life	7
1.2.8	Material Efficiency	7
1.2.9	Green Areas Upon Architectural Concept	8
1.3	Sealable Produces Under Marketing Activity	9
1.4	Conclusions	9
	References	11
2	Architectural Hypothesis	13
2.1	Introduction	13
2.2	Architectural Creation	13
2.3	Human Settlement and Architectural Phenomenon	15
2.4	Semiotics and Representation in Architecture	17
2.4.1	Space Perception	17

2.5	Architecture, Form, and Perception.	19
2.5.1	Static Approach	19
2.5.2	Dynamic Approach.	20
	References	21
3	Architectural Theory	23
3.1	Topological Psychology in Architecture	23
3.2	Shelter such a Protector Space	23
3.3	Action Space by a Free Movement.	25
3.3.1	Human Action	25
3.3.2	Structural Transfer	26
3.3.3	Dimensional Transfer	27
3.3.4	Orientation of Transfer	28
3.4	Operational Space and Architectural Program	29
3.4.1	Isomorphic Transfer	30
3.4.2	Interfering Creation Process.	30
3.5	Analytical Creation Phases	30
3.5.1	Collection of the Data.	30
3.5.2	Treatment of the Data.	31
3.6	The Indicators of Obvious Appearance upon an Architectural Theory.	32
	References	35

Part II Biophilic Architecture

4	Biophilic Architecture Hypothesis	39
4.1	Introduction	39
4.2	Interaction (Natural–Physical) Framework upon Biophilic Architecture.	40
4.3	Green Areas Placement and Variety upon Biophilic Architecture.	42
	References	46
5	Introduction on Plants and Vegetations.	47
5.1	Introduction	47
5.2	Horizontal Green Plan.	49
5.2.1	Grasses	56
5.2.2	Climbing Plants	56
5.3	Vertical Green Plan	60
5.3.1	Trees	61
5.3.2	Shrubs and Bushes	69
5.3.3	Herbs	77
	References	82

6	Introduction on Growing Media (Soil).	85
6.1	The Natural Growing Media	85
6.1.1	Introduction	85
6.1.2	Soil Structure	86
6.1.3	Soil Density	88
6.1.4	Soil Temperature and Root Growth Process	89
6.1.5	Soil Characteristics	89
6.1.6	Improving of Growing Media Structure	91
6.2	Synthetic Lightweight Soil	92
	References	94
7	Introduction on Irrigation Systems	95
7.1	Introduction	95
7.2	Irrigation Systems	95
7.3	Irrigation Systems Benefits	96
7.4	Irrigation Management	97
7.5	The Efficient Process of Plants Watering	98
7.6	Irrigation Scheduling	99
7.7	Irrigation Systems Competent for Biophilic Architecture	100
7.7.1	Drip Irrigation System (Microirrigation)	100
7.7.2	Sprinkler Irrigation System	106
	References	111
8	Green Areas in Biophilic Architecture	113
8.1	Introduction	113
8.2	Clime and Earth Climate	113
8.2.1	Why is it Winter, Spring, Summer, Autumn?	113
8.3	Clime, Plants and Environment Condition	115
8.4	The Green Areas Perception	116
8.5	Green Area and Architectural Framework	116
8.6	Plants and Local Microclimate	117
8.7	Green Areas, Biophilic Architecture and Seasons Impact	120
8.7.1	In the Summer	121
8.7.2	In the Winter	122
	References	122
9	Climate Change and Human Health (The Challenges and Remediation Act)	113
9.1	Introduction	123
9.2	What is Global Climate Change?	123
9.3	Climate Change in History	125
9.4	The Human Challenges on Climate Change	126
9.4.1	What can we do to Meet the Challenge?	127
9.4.2	How and why Does the Natural Climate System Vary on Decadal to Millennial Time-Scales?	129

9.5	Global Climate Change, Desertification and Green Areas Misplaced.	129
9.6	Climate Change Impacts upon General Human Life and Health.	131
9.6.1	Natural Disasters	132
9.6.2	Water Quantity and Quality Affected on Climate Change	133
9.6.3	Air Quality Impacts	134
9.6.4	Social Impacts	135
9.6.5	Gardening Effects.	136
	References	137
10	The Urban Heat Island Phenomenon upon Urban Components . .	139
10.1	Introduction	139
10.2	The Objective Factors of Urban Heat Island Phenomenon. . . .	140
10.3	The Impacts of Heat Island Phenomenon on Urban Human Life	142
10.3.1	Increase Energy Consumption	142
10.3.2	Amplify Air Pollution.	143
10.3.3	Increased Health Risk.	145
10.3.4	Impaired Water Quality.	145
10.3.5	Increase Thermal Discomfort.	146
10.4	Mitigation of Heat Island Effects	146
	References	149
11	The Green Areas Benefits Upon Urban Sustainability Role	151
11.1	Introduction	151
11.2	The Acoustical Insulation Benefit.	151
11.3	Thermal Insulation Benefit	152
11.4	Esthetical Benefit	155
	References	157
12	Plants, Oxygen and Human Life Benefits.	159
12.1	Introduction	159
12.2	Green Areas and Oxygen Quantity Produced	159
12.3	Photosynthesis Process such a Source of Air Quality	161
12.4	The Role of Photosynthesis over Microclimate	164
	References	165
13	Evapotranspiration and Environmental Benefits	167
13.1	Introduction	167
13.2	Factors Affecting the Evapotranspiration	169
13.3	Estimating Evapotranspiration	171
	References	171

14	Socio and Healthy Human Psychology upon Biophilic Architecture.	173
14.1	Introduction	173
14.1.1	Why Should This Activity Be So Popular?	174
14.2	Specific Hypothetical Perspective	174
14.2.1	Cultural Perspective	174
14.2.2	Evolutionary Perspective	175
14.3	The Psychological Benefits of Passively Viewing on Nature Greening	176
14.3.1	Which Physical Environments Are Excellent for Humans?	176
14.3.2	What Is Our Place in Nature?	177
14.4	Stress, Green Areas, and Mental Health	177
14.4.1	Why Should Green Areas Reduce Stress Levels in the Majority of the People?	178
14.5	Psycho Physiological Benefits	179
14.5.1	Affective Benefits	180
14.5.2	Cognitive Benefits	180
14.5.3	Gardening Benefits	181
14.5.4	The Social Benefits of Gardening	181
14.5.5	14.5.5 The Spiritual Benefits of Gardening	182
14.5.5	The Physical Benefits of Gardening	182
14.5.7	Horticultural Therapy Program	185
	References	185
15	Green Roofs	187
15.1	Introduction	187
15.2	What is a Green Roof?	188
15.3	Green Roofs Today	190
15.4	Green Roofs Types	191
15.4.1	After Roofs Inclination	191
15.4.2	After Structure form Arrangement	194
15.5	Green Roofs Components	199
15.5.1	Waterproofing Layer (A Seal)	199
15.5.2	Drainage Layer and Filtration	199
15.5.3	Substrate (Growing Medium)	201
15.5.4	Plants and Vegetation	202
15.6	Green Roofs Maintenance and Warranty	202
	References	204
16	Green Walls	205
16.1	Introduction	205
16.2	Why Green Walls	206

16.3	Green Walls Types	207
16.3.1	Extensive Green Walls	207
16.3.2	Intensive Green Wall	209
16.4	Analytical Instruction	213
	References	216

Part III Bioclimatic Architecture

17	Interaction between Architectural Creation and Environmental Impact	219
17.1	Introduction	219
17.2	Energy upon Ambience	220
17.2.1	Conduction	220
17.2.2	Convection	221
17.2.3	Radiation	221
17.2.4	Evaporation	222
17.3	Energy upon Architectural Conception	222
17.4	Physical Environment and Human Comfort	223
17.4.1	Acoustical Environment	224
17.4.2	Optical Environment	224
17.4.3	Thermal Environment	224
	References	227
18	Vernacular Architecture and Human Experiences	229
18.1	Introduction	229
18.2	Vernacular Architecture Values	230
18.2.1	Vernacular Architecture Conception	230
18.2.2	Vernacular Architectural Spaces Values	231
18.2.3	Architectural Elements Values	232
	References	232
19	Vernacular Architecture from Hot Regions (Basrah, Iraq)	233
19.1	Introduction	233
19.2	Climate in Basrah	234
19.3	Vernacular Architecture and Buildings Specific	234
19.4	Vernacular Architecture Mechanism	236
19.4.1	Habitat Spaces with Thermal Role	236
19.4.2	Architectural Elements with Thermal Role	240
19.4.3	Natural Elements with Positive Effects	243
19.5	Habitat-Specific Concept	245
19.5.1	Urban Texture Specific	245
19.5.2	Specific Volume	245
19.5.3	Specific Habitat Plan	246

19.5.4	Specific Building Materials	247
19.5.5	Energy on Vernacular Dwellings	248
	References	249
20	Vernacular Architecture from Cold and Temperate Regions (Aarhus, Denmark)	251
20.1	Climate in Aarhus	251
20.1.1	Temperature	251
20.1.2	Wind	251
20.1.3	Sunshine	252
20.2	Habitat Type in History	252
20.3	Vernacular Architecture Mechanism	254
20.3.1	Closed Functional Spaces	256
20.3.2	Intermediary Spaces	256
20.3.3	Open Functional Spaces	256
20.3.4	Landscape Elements with Thermal Elements	257
20.4	Habitat Concept Specific	258
20.4.1	Specific Urban Texture	258
20.4.2	Specific Habitat Plan	260
20.4.3	Specific Habitat Volume	260
20.4.4	Specific Construction Material	261
20.4.5	Heating System	261
	References	263
21	Improvement of Exterior and Interior Energy Allocate	265
21.1	Improvement of Exterior Energy Allocate	265
21.1.1	Ameliorate of Local Microclimate	265
21.1.2	The Effect of Local Earth Relief	265
21.1.3	The Effect of Water and Vegetation	267
21.2	Improvement of Interior Energy Allocate	268
21.2.1	Architectural Functions and Human Comfort Activity	268
21.2.2	Building Thermal Zones Such as Cascade	270
	References	275
22	Improvement of Thermal Insulation (Passive Buildings).	277
22.1	Introduction	277
22.2	Insulation Roles	277
22.2.1	Energy Saving and Conservation	278
22.2.2	Energy Changes and Control	278
22.2.3	Condensation Control	279
22.2.4	Fire Protection	280
22.3	Insulation Types	280
22.3.1	Permanent Insulations	280
22.3.2	Movable Insulation	282

22.4	Insulation in Passive Buildings Concept	285
22.4.1	Windows	285
22.4.2	External Door	286
22.4.3	Wall	287
22.4.4	Roof	287
22.4.5	Cold Bridging Effect	287
22.4.6	Air Tightness	288
22.4.7	Heating by Radiant Asymmetry	288
	References	288
23	Improvement of Energy Saving Concept	291
23.1	Introduction	291
23.2	Green Buildings Covering	291
23.3	Double Skin Façade	292
23.4	Heating Recovery Systems by Ventilative Development	293
23.5	Heat Break Transfer Concept	296
23.5.1	Underground Energy is Source of Permanent Energy	297
23.5.2	Sun Energy such Resource of Permanent Energy	298
23.5.3	Heat Break Concept in Double Skin Façade	298
	References	298
24	Windows Between Optical and Thermal Roles	301
24.1	Introduction	301
24.2	The Optical Roles of Windows	301
24.3	Windows Orientation and Emplacement	303
24.3.1	Optimal Orientation for Buildings in Temperate and Cold Climate (Southeast)	304
24.3.2	Optimal Orientation for Buildings in Hot Arid (Northeast)	304
24.4	The Thermal Roles of Windows	304
24.4.1	Windows in Hot Climate	305
24.4.2	Windows in Cold and Temperate Climate	306
24.5	Improvement of Windows Functions	306
24.5.1	Reducing of Heat Gain in Summer	306
24.5.2	Reducing of Heat Loss in Winter	308
24.6	Windows and Heat Break Transfer Concept	308

25.1	Introduction	311
25.2	Tubular Sun-Skylight in History	312
25.3	The Concept of Sun-Skylight Tube	313

25.4	How the Sun–Skylight Tube System Works.	314
25.4.1	Collector or Concentrator	315
25.4.2	Light Transporter System	315
25.4.3	Emitter or Diffuser (Distributor).	316
25.5	Sun–Skylight Tube Advantage	317
25.6	Developments of Future Technology.	317
	References	318
26	Illumination by Optical Arteries	319
26.1	Introduction	319
26.2	How Arteries Optics Works	319
26.3	The Application of Optical Arteries Idea.	320
26.3.1	Spaces Illumination	321
26.3.2	Other Applications of Optical Arteries	321
26.4	The System Components	322
	References	323
27	Illuminate by Light Shelves	325
27.1	Introduction	325
27.2	Light Shelves Role	326
27.3	Light Shelves Position and Functions	327
27.4	Distance Sunlight’s Reflective System	328
27.4.1	Sun Reflective Spots.	328
27.4.2	Special Sunlight Canals.	329
27.4.3	How the Light System Works	330
	References	331
28	Cooling by Effective Shading	333
28.1	Introduction	333
28.2	Shading Types	335
28.2.1	Shading by Agglomerate of Volumes	335
28.2.2	Shading on Courtyard	336
28.2.3	Shading by Space in Space Concept	337
28.2.4	Shading by Natural Elements (Vertical Plan).	338
28.2.5	Shading by Devices (see Movable Insulation)	339
	References	343
29	Cooling by Comfort Ventilation	345
29.1	Introduction	345
29.2	Cross Ventilation	345
29.3	Wind Catcher.	347
29.4	Nocturnal Ventilative Cooling	348

29.5	Ventilative Cooling Types	348
29.5.1	Ventilative Cooling by Open Loop	348
29.5.2	Ventilative Cooling by Closed Loop	349
	References	350
30	Cooling by Direct Evaporative Systems	353
30.1	Introduction	353
30.2	Evaporative Cooling Approach.	353
30.3	Direct Evaporative Cooling Systems	355
	References	361
31	Cooling by Indirect Evaporative Systems	363
31.1	Introduction	363
31.2	Cooling by Water Roof Spray	363
31.3	Cooling by Roof Bond	363
31.4	Cooling by Perforate Front Wall	364
31.5	Cooling by Using of Cold Water Storage Tank	365
	References	366
32	Cooling by Thermal Earth Inertia.	367
32.1	Introduction	367
32.2	Cooling by Underground Thermal Inertia Systems	368
32.2.1	Cooling Using a Free Underground Space	369
32.2.2	Cooling Using Bedrock on Underground Spaces	370
32.3	Underground Building.	370
32.4	Cooling by Underground Earth Tubes	371
32.4.1	Tubes Material.	372
32.4.2	Tube Diameter	372
32.4.3	Tube Location	372
32.4.4	Tube Length	372
32.5	Earth Tubes Types	372
32.5.1	Vertical Closed-Loop	373
32.5.2	Horizontal Closed-Loop	373
32.6	General Consideration of Cooling Tubes	374
