Foreword	ix
-----------------------	----

Jean-Francois Joanny and Jacques Prost

Constructing Tools for the Description of Cell Dynamics

1 Introduction	1
2 Hydrodynamic theory of active gels	2
3 Material science aspects	5
4 Cell motility	9
5 Cell oscillations	16
6 Wound healing and cytokinesis	21
7 Conclusion	28
References	30

Jasper van der Gucht and Cécile Sykes

A Physical Model of Cellular Symmetry Breaking

1 Introduction	33
2 The actin cortex and polarization	34
3 Build-up and release of tension in actin cortices grown around beads	36
4 Modeling of actin shell growth and rupture around beads	38
5 Comparison of symmetry breaking in cells and around beads	40
6 Symmetry can break from one point or from multiple points	41
7 Stress-induced polarization in other systems	42
8 Conclusion	43
References	43

Jonathon Howard

Motor Proteins as Nanomachines: The Roles of Thermal Fluctuations in Generating Force and Motion

The force-generation problem	47
Rectified-diffusion model	49
Flashing-ratchet model	51
Huxley 1957 and powerstroke models	52

Hand-over-hand models	55
Open questions	56
References	57

David Lacoste and Kirone Mallick

Fluctuation Relations for Molecular Motors

1 Introduction	61
2 Stochastic models of molecular motors	63
3 Fluctuation relations in models of molecular motors	74
4 Conclusions	84
References	85

*Maria Manosas, Timothée Lionnet, Élise Praly, Ding Fangyuan,
Jean-François Allemand, David Bensimon and Vincent Croquette*

**Studies of DNA-Replication at the Single Molecule Level
Using Magnetic Tweezers**

1 Introduction	89
2 Magnetic tweezers	90
3 How stretching and twisting DNA helps to track replication process	93
4 Study of the Replisome	98
5 Characterizing the helicase activity	101
6 Behaviour of the primosome: coupling activity of the helicase and the primase	107
7 DNA synthesis	114
8 Conclusions	118
References	119

Raymond E. Goldstein

Evolution of Biological Complexity

1 Introduction	123
2 <i>Volvox</i> and its relatives as model organisms	125
3 The advection-diffusion problem	127
4 Allometric scaling of flagella-driven flows	129
5 Phototactic steering	133
6 Flagellar synchronization	134
7 Conclusions	137
References	137

Stanislas Dehaene

**Conscious and Nonconscious Processes:
Distinct Forms of Evidence Accumulation?**

An experimental strategy for exploring consciousness	141
How do we measure whether conscious access occurred?	142
Subliminal processing and evidence accumulation models	144
Subliminal perception	145
Subliminal semantic processing	147
Subliminal accumulation of evidence towards a decision	147
Role of instruction and attention in subliminal processing	149
Modulation by instructions	150
Modulation by executive attention	150
Modulation of subliminal priming by temporal attention	150
Modulation by spatial attention	152
Recent evidence for extended subliminal processing	152
Limits to subliminal processing	153
Durable and explicit information maintenance	154
Global access and novel combinations of operations	154
Intentional action	155
Cerebral bases of conscious and nonconscious computations	155
A global workspace model of conscious access	157
Accounting for subliminal processing	160
A distinct state of preconscious processing	161
Conclusion: Conscious access as a solution to von Neumann's problem?	163
References	164
