Preface to the Third Edition	v
Preface to the Second Edition	vii
Preface to the First Edition	ix
 Part I. THE IID CASE: FUNCTIONAL LAWS OF SMALL NUMBERS	 1
 1 Functional Laws of Small Numbers	 3
1.1 Introduction	3
1.2 Bounds for the Functional Laws of Small Numbers	7
1.3 Applications	14
 2 Extreme Value Theory	 25
2.1 Domains of Attraction, von Mises Conditions	25
2.2 The δ -Neighborhood of a GPD	35
2.3 The Peaks-Over-Threshold Method	42
2.4 Parameter Estimation in δ -Neighborhoods of GPD	46
2.5 Initial Estimation of the Class Index	55
2.6 Power Normalization and p-Max Stable Laws	65
2.7 Heavy and Super-Heavy Tail Analysis	75
 3 Estimation of Conditional Curves	 103
3.1 Poisson Process Approach	103
3.2 Applications: The Non-parametric Case	111
3.3 Applications: The Semiparametric Case	114
3.4 Extension to Several Points	120
3.5 A Nearest Neighbor Alternative	124
3.6 Application: Optimal Accuracy of Estimators	128

Part II. THE IID CASE:	
MULTIVARIATE EXTREMES	133
4 Basic Theory of Multivariate Maxima	135
4.1 Limiting Distributions of Multivariate Maxima	135
4.2 Representations and Dependence Functions	140
4.3 Pickands Representation and Dependence Function	147
4.4 The D -Norm	157
5 Multivariate Generalized Pareto Distributions	171
5.1 The Basics	171
5.2 Multivariate Peaks-Over-Threshold Approach	177
5.3 Peaks-Over-Threshold Stability of a GPD	190
5.4 A Spectral Decomposition Based on Pickands Coordinates	194
5.5 Multivariate Domains of Attraction, Spectral Neighborhoods	201
5.6 The Pickands Transform	209
5.7 Simulation Techniques	221
5.8 Testing the GPD Assumption, Threshold Selection	229
5.9 Parametric Estimation Procedures	240
5.10 Testing in Logistic GPD Models	250
6 The Pickands Approach in the Bivariate Case	259
6.1 Preliminaries	259
6.2 The Measure Generating Function M	267
6.3 The Pickands Transform in the Bivariate Case	272
6.4 The Tail Dependence Function	280
6.5 Testing Tail Dependence against Residual Tail Dependence	288
6.6 Estimation of the Angular Density in Bivariate GP Models	299
7 Multivariate Extremes: Supplementary Concepts and Results	311
7.1 Strong Approximation of Exceedances	311
7.2 Further Concepts of Extremes	317
7.3 Thinned Empirical Processes	320
7.4 Max-Stable Stochastic Processes	335
Part III. NON-IID OBSERVATIONS	341
8 Introduction to the Non-IID Case	343
8.1 Definitions	343
8.2 Stationary Random Sequences	344
8.3 Independent Random Sequences	346
8.4 Non-stationary Random Sequences	351
8.5 Triangular Arrays of Discrete Random Variables	352

9	Extremes of Random Sequences	357
9.1	Introduction and General Theory	357
9.2	Applications: Stationary Sequences	368
9.3	Applications: Independent Sequences	372
9.4	Applications: Non-stationary Sequences	374
9.5	Extensions: Random Fields	379
10	Extremes of Gaussian Processes	381
10.1	Introduction	381
10.2	Stationary Gaussian Processes	382
10.3	Non-stationary Gaussian Processes	388
10.4	Application: Empirical Characteristic Functions	414
10.5	Extensions: Maxima of Gaussian fields	416
11	Extensions for Rare Events	419
11.1	Rare Events of Random Sequences	419
11.2	The Point Process of Exceedances	423
11.3	Application to Peaks-over-Threshold	428
11.4	Application to Rare Events	431
11.5	Triangular Arrays of Rare Events	439
11.6	Multivariate Extremes of Non-IID Sequences.	447
12	Statistics of Extremes	455
12.1	Introduction	455
12.2	Estimation of θ and $\pi(\cdot)$	456
12.3	Application to Ecological Data	458
12.4	Frost Data: An Application	462
	Author Index	473
	Subject Index	477
	Bibliography	483

Laws of Small Numbers: Extremes and Rare Events

Falk, M.; Hüsler, J.; Reiss, R.-D.

2011, XVI, 509 p., Softcover

ISBN: 978-3-0348-0008-2

A product of Birkhäuser Basel
