Preface	ix
<i>L. Chen and M. Dreher</i>	
Quantum Semiconductor Models	1
1 Introduction	1
1.1 A first example	1
1.2 Structure of the paper	3
2 Derivation of the models	4
2.1 Quantum Vlasov and quantum Boltzmann equations	4
2.2 Quantum drift diffusion equations	7
2.3 Viscous quantum hydrodynamics	9
2.4 Historical background and further models	12
3 The quantum drift diffusion model	14
3.1 Introduction	14
3.2 A special fourth order parabolic equation	18
3.3 Quantum drift diffusion equations in one dimension	22
3.4 Quantum drift diffusion equations in two and three dimensions	29
3.5 Entropy based methods	29
3.6 Open problems	37
4 The viscous quantum hydrodynamic model	37
4.1 Known results	37
4.2 Main results	40
4.3 Elliptic systems of mixed order	42
4.4 Stationary states and their stability	57
Appendix: A variant of Aubin's lemma	63
Acknowledgment	65
References	65
<i>H. BelHadjAli, A. Ben Amor and J.F. Brasche</i>	
Large Coupling Convergence: Overview and New Results	73
1 Introduction	73
2 Non-negative form perturbations	75

2.1	Notation and general hypotheses	75
2.2	A resolvent formula	78
2.3	Convergence with respect to the operator norm	79
2.4	Schrödinger operators	85
2.5	Convergence within a Schatten-von Neumann class	89
2.6	Compact perturbations	92
2.7	Dynkin's formula	97
2.8	Differences of powers of resolvents	100
3	Dirichlet forms	104
3.1	Notation and basic results	104
3.2	Trace of a Dirichlet form	106
3.3	A domination principle	111
3.4	Convergence with maximal rate and equilibrium measures	112
	Acknowledgment	116
	References	116

M. Ben-Artzi

Smooth Spectral Calculus	119
1 Introduction	120
2 Functional spaces and notation	123
3 The basic abstract structure	124
3.1 The limiting absorption principle – LAP	126
3.2 Persistence of smoothness under functional operations	130
4 Short-range perturbations	131
4.1 The exceptional set Σ_P	133
5 Sums of tensor products	139
5.1 The operator $H = H_1 \otimes I_2 + I_1 \otimes H_2$	140
5.2 Extending the abstract framework of the LAP	142
5.3 The LAP for $H = H_1 \otimes I_2 + I_1 \otimes H_2$	143
5.4 The Stark Hamiltonian	146
5.5 The operator $H_0 = -\Delta$ and some wild perturbations	149
6 The limiting absorption principle for second-order divergence-type operators	152
6.1 The operator $H_0 = -\Delta$ – revisited	154
6.2 Proof of the LAP for the operator H	157
6.3 An application: Existence and completeness of the wave operators $W_{\pm}(H, H_0)$	163
7 An eigenfunction expansion theorem	163
8 Global spacetime estimates for a generalized wave equation	170
9 Further directions and open problems	176
References	178

W. Bauer, K. Furutani and C. Iwasaki

Spectral Analysis and Geometry of Sub-Laplacian and Related Grushin-type Operators	183
1 Introduction	184
2 Sub-Riemannian manifolds	188
3 Bicharacteristic flow of Grushin-type operator	192
4 Heisenberg group case	196
4.1 Grushin-type operators	196
4.2 Isoperimetric interpretation and double fibration: Grushin plane case	198
5 Sub-Riemannian structure on $SL(2, \mathbb{R})$	202
5.1 A sub-Riemannian structure and Grushin-type operator	202
5.2 Horizontal curves: $SL(2, \mathbb{R})$	206
5.3 Isoperimetric interpretation: $SL(2, \mathbb{R}) \rightarrow$ Upper half-plane	208
6 The $S^3 \rightarrow P^1(\mathbb{C})$ case	209
6.1 Spherical Grushin operator and Grushin sphere	209
6.2 Geodesics on the Grushin sphere	212
7 Quaternionic structure on \mathbb{R}^8 and sub-Riemannian structures	220
7.1 Vector fields on S^7 and sub-Riemannian structures	221
7.2 Hopf fibration and a sub-Riemannian structure	224
7.3 Singular metric on S^4 and a spherical Grushin operator	226
7.4 Sub-Riemannian structure on a hypersurface in S^7	228
8 Sub-Riemannian structure on nilpotent Lie groups	231
9 Engel group and Grushin-type operators	232
9.1 Engel group and their subgroups	232
9.2 Solution of a Hamilton-Jacobi equation	235
10 Free two-step nilpotent Lie algebra and group	239
11 2-step nilpotent Lie groups of dimension ≤ 6	240
11.1 Heat kernel of the free nilpotent Lie group of dimension 6	240
11.2 Heat kernel of Grushin-type operators	243
12 Spectrum of a five-dimensional compact nilmanifold	250
13 Spectrum of a six-dimensional compact nilmanifold	263
14 Heat trace asymptotics on compact nilmanifolds of the dimensions five and six	264
14.1 The six-dimensional case	264
14.2 The five-dimensional case	269
15 Concluding remarks	271
Appendix A: Basic theorems for pseudo-differential operators of Weyl symbols and heat kernel construction	272
Appendix B: Heat kernel of the sub-Laplacian on 2-step nilpotent groups	277

Appendix C: The trace of the fundamental solution	281
Appendix D: Selberg trace formula	285
Acknowledgment	287
References	287

Zeta Functions of Elliptic Cone Operators	291
1 Introduction	291
2 Classical results	292
3 Conical singularities	294
4 Cone differential operators	297
5 Domains	301
6 Spectra	306
7 Rays of minimal growth for elliptic cone operators	308
8 Asymptotics	313
References	318

Pseudodifferential Operators on Manifolds:

A Coordinate-free Approach	321
1 Introduction	321
2 PDOs: local definition and basic properties	322
3 Linear connections	324
4 PDOs: a coordinate-free approach	327
5 Functions of the Laplacian	330
6 An approximate spectral projection	333
7 Other known results and possible developments	335
7.1 Other definitions for scalar PDOs	335
7.2 Operators on sections of vector bundles	336
7.3 Noncompact manifolds	337
7.4 Other symbol classes	337
7.5 Operators generated by vector fields	337
7.6 Operators on Lie groups	338
7.7 Geometric aspects and physical applications	338
7.8 Global phase functions	338
References	339

Partial Differential Equations and Spectral Theory
