

Contents

Preface	vii
1 Introduction	1
1.1 The Maxwell Equations	1
1.2 Some tools from analysis	13
Bibliography	19
2 Photonic bandstructure calculations	23
2.1 Approximation of Maxwell eigenvalues and eigenfunctions	23
2.2 Calculation of the photonic band structure	40
Bibliography	58
3 On the spectra of periodic differential operators	63
3.1 The spectrum of selfadjoint operators	64
3.2 Periodic differential operators	65
3.3 Fundamental domain of periodicity and the Brillouin zone	67
3.4 Bloch waves, Floquet transformation	68
3.5 Completeness of the Bloch waves	70
3.6 The spectrum of A	71
Bibliography	76
4 An introduction to direct and inverse scattering theory	79
4.1 Scattering of Time-harmonic Waves	81
4.2 Time-Harmonic Inverse Wave Scattering	106
Bibliography	123
5 The role of the nonlinear Schrödinger equation in nonlinear optics	127
5.1 Introduction	127
5.2 The NLS equation	130
5.3 Cubic Nonlinearities	133
5.4 Quadratic Nonlinearities	141
5.5 Summary and outlook	144

5.6 The universality of the NLS equation 146

5.7 Applications 148

Bibliography 159

Photonic Crystals: Mathematical Analysis and Numerical
Approximation

Dörfler, W.; Lechleiter, A.; Plum, M.; Schneider, G.;
Wieners, C.

2011, VIII, 162 p., Softcover

ISBN: 978-3-0348-0112-6

A product of Birkhäuser Basel
