<b>Preface</b>	<b>xi</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Thermodynamic formalism and dimension theory . . . . .	1
1.1.1 Classical thermodynamic formalism . . . . .	1
1.1.2 Dimension theory and multifractal analysis . . . . .	2
1.1.3 Attractors in infinite-dimensional spaces . . . . .	4
1.2 Extensions and applications . . . . .	5
1.2.1 Nonadditive formalism and dimension estimates . . . . .	5
1.2.2 Subadditive formalism and entropy spectra . . . . .	6
1.2.3 Almost additive formalism and Gibbs measures . . . . .	8
1.3 Contents of the book . . . . .	9
1.4 Basic notions . . . . .	11
1.4.1 Dimension theory . . . . .	11
1.4.2 Ergodic theory . . . . .	13
<b>I Classical Thermodynamic Formalism</b>	<b>17</b>
<b>2 Thermodynamic Formalism: Basic Notions</b>	<b>19</b>
2.1 Topological pressure . . . . .	19
2.2 Equivalent definitions of pressure . . . . .	21
2.3 Variational principle . . . . .	28
2.4 Equilibrium measures . . . . .	36
<b>3 The Case of Symbolic Dynamics</b>	<b>41</b>
3.1 Topological pressure . . . . .	41
3.2 Two-sided sequences . . . . .	45
3.3 Equilibrium measures . . . . .	46
3.4 Gibbs measures . . . . .	46

<b>II</b>	<b>Nonadditive Thermodynamic Formalism</b>	<b>53</b>
<b>4</b>	<b>Nonadditive Thermodynamic Formalism</b>	<b>55</b>
4.1	Nonadditive topological pressure . . . . .	55
4.2	Properties of the pressure . . . . .	60
4.2.1	Dependence on the data . . . . .	60
4.2.2	Characterizations of the capacity pressures . . . . .	62
4.2.3	Subadditive sequences . . . . .	65
4.3	Variational principle . . . . .	67
4.4	Bowen's equation . . . . .	78
4.5	The case of symbolic dynamics . . . . .	80
<b>5</b>	<b>Dimension Estimates for Repellers</b>	<b>85</b>
5.1	Repellers of continuous expanding maps . . . . .	85
5.1.1	Basic notions . . . . .	85
5.1.2	Dimension estimates . . . . .	90
5.1.3	Conformal maps . . . . .	96
5.2	Repellers of smooth expanding maps . . . . .	98
5.2.1	Basic notions . . . . .	98
5.2.2	Dimension estimates . . . . .	99
5.2.3	Conformal maps . . . . .	105
5.3	Further developments . . . . .	108
5.3.1	Sharp upper dimension estimates . . . . .	108
5.3.2	Self-affine repellers and nonlinear extensions . . . . .	110
5.3.3	Measures of full dimension . . . . .	114
5.3.4	Nonuniformly expanding repellers . . . . .	116
5.3.5	Upper bounds involving Lyapunov exponents . . . . .	118
<b>6</b>	<b>Dimension Estimates for Hyperbolic Sets</b>	<b>121</b>
6.1	Hyperbolic sets for homeomorphisms . . . . .	121
6.1.1	Basic notions . . . . .	122
6.1.2	Dimension estimates . . . . .	124
6.2	Hyperbolic sets for diffeomorphisms . . . . .	127
6.2.1	Basic notions . . . . .	127
6.2.2	Dimension estimates . . . . .	129
6.2.3	The conformal case . . . . .	132
6.3	Further developments . . . . .	135
<b>III</b>	<b>Subadditive Thermodynamic Formalism</b>	<b>139</b>
<b>7</b>	<b>Asymptotically Subadditive Sequences</b>	<b>141</b>
7.1	Asymptotically subadditive sequences . . . . .	141
7.2	Variational principle . . . . .	145

7.3	Pressure for subadditive sequences . . . . .	152
7.4	Equilibrium measures . . . . .	156
7.5	The case of symbolic dynamics . . . . .	161
<b>8</b>	<b>Limit Sets of Geometric Constructions</b>	<b>165</b>
8.1	Geometric constructions . . . . .	165
8.2	Moran constructions . . . . .	171
8.3	Expanding induced maps . . . . .	172
<b>9</b>	<b>Entropy Spectra</b>	<b>179</b>
9.1	Preliminaries . . . . .	179
9.2	Entropy spectra . . . . .	182
9.3	General maps . . . . .	185
9.4	Multidimensional spectra . . . . .	195
<b>IV</b>	<b>Almost Additive Thermodynamic Formalism</b>	<b>201</b>
<b>10</b>	<b>Almost Additive Sequences</b>	<b>203</b>
10.1	Repellers . . . . .	203
10.1.1	Pressure for almost additive sequences . . . . .	204
10.1.2	Variational principle . . . . .	207
10.1.3	Equilibrium and Gibbs measures . . . . .	212
10.1.4	Equilibrium measures and periodic points . . . . .	220
10.2	Hyperbolic sets . . . . .	222
10.3	General variational principle . . . . .	223
10.4	Regularity of the pressure . . . . .	225
<b>11</b>	<b>Nonconformal Repellers</b>	<b>231</b>
11.1	Repellers and Lyapunov exponents . . . . .	231
11.2	Cone condition . . . . .	233
11.3	Bounded distortion . . . . .	236
11.4	Cone condition plus bounded distortion . . . . .	238
11.5	Construction of weak Gibbs measures . . . . .	239
11.6	Multifractal analysis of Lyapunov exponents . . . . .	247
<b>12</b>	<b>Multifractal Analysis</b>	<b>255</b>
12.1	Conditional variational principle . . . . .	255
12.1.1	The case of entropy spectra . . . . .	256
12.1.2	The notion of $u$ -dimension . . . . .	257
12.1.3	Conditional variational principle . . . . .	258
12.1.4	Irregular sets . . . . .	266
12.2	Dimension Spectra . . . . .	267
12.2.1	Dimension along the stable and unstable directions . . . . .	268

12.2.2 Construction of a noninvariant measure . . . . .	271
12.2.3 Estimates for the pointwise dimension . . . . .	275
12.2.4 Dimension spectra . . . . .	279
<b>Bibliography</b>	<b>281</b>
<b>Index</b>	<b>295</b>

Thermodynamic Formalism and Applications to  
Dimension Theory

Barreira, L.

2011, XII, 300 p., Hardcover

ISBN: 978-3-0348-0205-5
