

Contents

1	Review of the Uses of Invariants in Special Relativity	1
1.1	Relative Velocity	1
1.2	Doppler Shift	2
1.3	Aberration	4
1.3.1	Consistency Check	5
1.4	Apparent Luminosity	9
2	Accelerated Motion in Special Relativity	13
2.1	Accelerated Meter Stick	20
2.2	Rigid Motions in Special Relativity	21
2.3	Fermi–Walker Transport	26
2.4	Flat Proper Geometry	30
2.5	Constant Rotation About a Fixed Axis	32
2.6	Irrotational Flow	36
3	Realizations of Continuous Groups	39
3.1	Representations	43
3.2	Diffeomorphism Group	44
3.3	Tensors and Tensor Densities	46
3.4	Bitensors, Tritensors, and n -Tensors	48
4	Riemannian Manifolds	51
4.1	Local Parallelism	52
4.2	Parallel Displacement of Tensors	54
4.3	Covariant Differentiation	55
4.4	Tensor Properties of the Lie Derivative	57
4.5	The Curvature Tensor	58
4.6	n -Beins, Tetrads and Flat Manifolds	61

5	The Free Particle. Geodesics	63
5.1	Isometries and Conservation Laws.	67
5.2	Geodesic Deviation	68
6	Weak Field Approximation. Newton's Theory.	71
7	Ensembles of Particles	79
7.1	Gases at Equilibrium	90
8	Production of Gravitational Fields by Matter	95
8.1	Energy–Momentum Density of a Free Particle	98
8.2	The Weak Field Approximation	99
8.3	Energy–Momentum–Stress Density of a Gas at Equilibrium	103
9	Conservation Laws.	105
9.1	Energy, Momentum, Angular Momentum and Spin.	108
10	Phenomenological Description of a Conservative Continuous Medium.	111
10.1	The Elastic Medium.	120
10.2	The Viscous Thermally Conducting Gas.	122
11	Solubility of the Einstein and Matter Equations	127
11.1	The Cosmological Constant	131
12	Energy, Momentum and Stress in the Gravitational Field	133
12.1	Condensed Notation.	133
12.2	Variation of the Action	134
12.3	Asymptotic Stationary Gravitational Fields in the Full Nonlinear Theory.	138
12.4	Newtonian Approximation	148
13	Measurement of Asymptotic Fields.	151
14	The Electromagnetic Field	161
14.1	Electromagnetic Waves	166
14.2	Energy, Momentum, and Angular Momentum in Electromagnetic Waves	172
15	Gravitational Waves	177
15.1	Eikonal Approximation	186
15.2	Lines-of-Force Representation and Circularly Polarized Waves	196

15.3 Energy, Momentum, and Angular Momentum in Gravitational Waves.	197
15.4 Weak Radiation in Flat Spacetime.	201
15.5 Generation of Gravitational Waves	204
Appendix A: Spinning Bodies	219
Appendix B: Weak Field Gravitational Wave.	247
Appendix C: Stationary Spherically (or Rotationally) Symmetric Metric	251
Appendix D: Kerr Metric Subcalculations	271
Appendix E: Friedmann Cosmology.	275
Appendix F: Dynamical Equations and Diffeomorphisms	283

Bryce DeWitt's Lectures on Gravitation

Edited by Steven M. Christensen

DeWitt, B. - Christensen, S.M. (Ed.)

2011, XII, 288 p., Softcover

ISBN: 978-3-540-36909-7
