<b>1</b>	<b>Introduction</b>	1
1.1	The Concept of the Boundary Element Method	1
1.1.1	Basic Terminology	1
1.1.2	A Physical Example	3
1.1.3	Fundamental Solutions	7
1.1.4	Potentials and Boundary Integral Operators	7
1.2	Numerical Analysis of Boundary Integral Equations	10
1.2.1	Galerkin Method	10
1.2.2	Efficient Methods for the Solution of the Galerkin Equations	12
1.2.2.1	Quadrature Methods	12
1.2.2.2	Solving the Linear System of Equations	13
1.2.2.3	Cluster Method	14
1.2.2.4	Surface Approximation	15
1.2.2.5	A Posteriori Error Estimation	17
<b>2</b>	<b>Elliptic Differential Equations</b>	21
2.1	Elementary Functional Analysis	21
2.1.1	Banach and Hilbert Spaces	21
2.1.1.1	Normed Spaces	21
2.1.1.2	Linear Operators	22
2.1.1.3	Banach Spaces	23
2.1.1.4	Embeddings	24
2.1.1.5	Hilbert Spaces	24
2.1.2	Dual Spaces	25
2.1.2.1	Dual Space of a Normed, Linear Space	25
2.1.2.2	Dual Operator	26
2.1.2.3	Adjoint Operator	27
2.1.2.4	Gelfand Triple	29
2.1.2.5	Weak Convergence	30
2.1.3	Compact Operators	30
2.1.4	Fredholm–Riesz–Schauder Theory	31
2.1.5	Bilinear and Sesquilinear Forms	32

2.1.6	Existence Theorems .....	35
2.1.7	Interpolation Spaces .....	46
2.2	Geometric Tools .....	47
2.2.1	Function Spaces .....	47
2.2.2	Smoothness of Domains .....	50
2.2.3	Normal Vector .....	52
2.2.4	Boundary Integrals .....	53
2.3	Sobolev Spaces on Domains $\Omega$ .....	54
2.4	Sobolev Spaces on Surfaces $\Gamma$ .....	57
2.4.1	Definition of Sobolev Spaces on $\Gamma$ .....	57
2.4.2	Sobolev Spaces on $\Gamma_0 \subset \Gamma$ .....	59
2.5	Embedding Theorems .....	60
2.6	Trace Operators .....	63
2.7	Green's Formulas and Normal Derivatives .....	66
2.8	Solution Operator .....	72
2.9	Elliptic Boundary Value Problems .....	76
2.9.1	Classical Formulation of Elliptic Boundary Value Problems .....	76
2.9.1.1	Interior Dirichlet Problem (IDP) .....	76
2.9.1.2	Interior Neumann Problem (INP) .....	76
2.9.1.3	Interior Mixed Boundary Value Problem (IMP) .....	77
2.9.1.4	Exterior Dirichlet Problem (EDP) .....	77
2.9.1.5	Exterior Neumann Problem (ENP) .....	78
2.9.1.6	Exterior Mixed Boundary Value Problem (EMP) .....	78
2.9.1.7	Transmission Problem (TP) .....	78
2.9.2	Variational Formulation of Elliptic Boundary Value Problems .....	79
2.9.2.1	Interior Dirichlet Problem (IDP) .....	79
2.9.2.2	Interior Neumann Problem (INP) .....	80
2.9.2.3	Interior Mixed Boundary Value Problem (IMP) .....	80
2.9.2.4	Function Spaces for Exterior Problems .....	81
2.9.2.5	Exterior Dirichlet Problem (EDP) .....	83
2.9.2.6	Exterior Neumann Problem (ENP) .....	84
2.9.2.7	Exterior Mixed Boundary Value Problem (EMP) .....	85
2.9.2.8	Transmission Problem (TP) .....	85
2.9.3	Equivalence of Strong and Weak Formulation .....	86
2.9.3.1	Interior Problems .....	86
2.9.3.2	Exterior Problems .....	87
2.10	Existence and Uniqueness .....	89
2.10.1	Interior Problems .....	91
2.10.1.1	Interior Dirichlet Problem .....	91

2.10.1.2	Interior Neumann Problem .....	92
2.10.1.3	Interior Mixed Boundary Value Problem .....	93
2.10.2	Exterior Problems .....	93
2.10.2.1	General Elliptic Operator with $a_{\min} c > \ \mathbf{b}\ ^2$ .....	93
2.10.2.2	Laplace Operator .....	94
2.10.2.3	Helmholtz Equation .....	99
<b>3</b>	<b>Elliptic Boundary Integral Equations .....</b>	<b>101</b>
3.1	Boundary Integral Operators .....	101
3.1.1	Newton Potential .....	103
3.1.2	Mapping Properties of the Boundary Integral Operators.....	112
3.2	Regularity of the Solutions of the Boundary Integral Equations .....	114
3.3	Jump Relations of the Potentials and Explicit Representation Formulas .....	115
3.3.1	Jump Properties of the Potentials .....	115
3.3.2	Explicit Representation of the Boundary Integral Operator $V$ .....	117
3.3.3	Explicit Representation of the Boundary Integral Operators $K$ and $K'$ .....	122
3.3.4	Explicit Representation of the Boundary Integral Operator $W$ .....	132
3.4	Integral Equations for Elliptic Boundary Value Problems .....	139
3.4.1	The Indirect Method .....	140
3.4.1.1	Interior Problems .....	140
3.4.1.2	Exterior Problems .....	144
3.4.1.3	Transmission Problem .....	144
3.4.2	The Direct Method .....	145
3.4.2.1	Interior Problems .....	145
3.4.2.2	Exterior Problems .....	147
3.4.3	Comparison Between Direct and Indirect Method .....	148
3.5	Unique Solvability of the Boundary Integral Equations .....	149
3.5.1	Existence and Uniqueness for Closed Surfaces and Dirichlet or Neumann Boundary Conditions.....	149
3.5.2	Existence and Uniqueness for the Mixed Boundary Value Problem .....	153
3.5.3	Screen Problems .....	156
3.6	Calderón Projector .....	157
3.7	Poincaré–Steklov Operator .....	160
3.8	Invertibility of Boundary Integral Operators of the Second Kind .....	162
3.9	Boundary Integral Equations for the Helmholtz Equation .....	168
3.9.1	Helmholtz Equation .....	168
3.9.2	Integral Equations and Resonances .....	169
3.9.3	Existence of Solutions of the Exterior Problem .....	172
3.9.4	Modified Integral Equations .....	175
3.10	Bibliographical Remarks on Variational BIEs .....	177

<b>4</b>	<b>Boundary Element Methods</b>	183
4.1	Boundary Elements for the Potential Equation in $\mathbb{R}^3$	184
4.1.1	Model Problem 1: Dirichlet Problem	184
4.1.2	Surface Meshes	186
4.1.3	Discontinuous Boundary Elements	191
4.1.4	Galerkin Boundary Element Method	193
4.1.5	Convergence Rate of Discontinuous Boundary Elements	197
4.1.6	Model Problem 2: Neumann Problem	201
4.1.7	Continuous Boundary Elements	202
4.1.8	Galerkin BEM with Continuous Boundary Elements	211
4.1.9	Convergence Rates with Continuous Boundary Elements	212
4.1.10	Model Problem 3: Mixed Boundary Value Problem	218
4.1.11	Model Problem 4: Screen Problems	220
4.2	Convergence of Abstract Galerkin Methods	222
4.2.1	Abstract Variational Problem	222
4.2.2	Galerkin Approximation	223
4.2.3	Compact Perturbations	226
4.2.4	Consistent Perturbations: Strang's Lemma	231
4.2.5	Aubin–Nitsche Duality Technique	236
	4.2.5.1 Errors in Functionals of the Solution	237
	4.2.5.2 Perturbations	241
4.3	Proof of the Approximation Property	246
4.3.1	Approximation Properties on Plane Panels	247
4.3.2	Approximation on Curved Panels	254
4.3.3	Continuity of Functions in $H_{pw}^s(\Gamma)$ for $s > 1$	258
4.3.4	Approximation Properties of $S_G^{p,-1}$	259
4.3.5	Approximation Properties of $S_G^{p,0}$	261
4.4	Inverse Estimates	278
4.5	Condition of the System Matrices	284
4.6	Bibliographical Remarks and Further Results	285
<b>5</b>	<b>Generating the Matrix Coefficients</b>	289
5.1	Kernel Functions and Strongly Singular Integrals	290
5.1.1	Geometric Conditions	290
5.1.2	Cauchy-Singular Integrals	294
5.1.3	Explicit Conditions on Cauchy-Singular Kernel Functions	297
5.1.4	Kernel Functions in Local Coordinates	299
5.2	Relative Coordinates	304
5.2.1	Identical Panels	305
5.2.2	Common Edge	312
5.2.3	Common Vertex	315
5.2.4	Overview: Regularizing Coordinate Transformations	316
5.2.5	Evaluating the Right-Hand Side and the Integral-Free Term	320

5.3	Numerical Integration .....	321
5.3.1	Numerical Quadrature Methods .....	321
5.3.1.1	Simple Quadrature Methods .....	322
5.3.1.2	Tensor-Gauss Quadrature .....	323
5.3.2	Local Quadrature Error Estimates .....	324
5.3.2.1	Local Error Estimates for Simple Quadrature Methods .....	324
5.3.2.2	Derivative Free Quadrature Error Estimates for Analytic Integrands .....	329
5.3.2.3	Estimates of the Analyticity Ellipses of the Regularized Integrands .....	331
5.3.2.4	Quadrature Orders for Regularized Kernel Functions .....	341
5.3.3	The Influence of Quadrature on the Discretization Error ....	342
5.3.4	Overview of the Quadrature Orders for the Galerkin Method with Quadrature .....	351
5.3.4.1	Integral Equations of Negative Order .....	351
5.3.4.2	Equations of Order Zero .....	351
5.3.4.3	Equations of Positive Order .....	352
5.4	Additional Results and Quadrature Techniques .....	352
<b>6</b>	<b>Solution of Linear Systems of Equations .....</b>	<b>353</b>
6.1	cg Method .....	354
6.1.1	cg Basic Algorithm .....	354
6.1.2	Preconditioning Methods .....	356
6.1.3	Orthogonality Relations .....	357
6.1.4	Convergence Rate of the cg Method .....	358
6.1.5	Generalizations .....	360
6.2	Descent Methods for Non-symmetric Systems .....	361
6.2.1	Descent Methods .....	361
6.2.2	Convergence Rate of MR and Orthomin( $k$ ) .....	362
6.3	Iterative Solvers for Equations of Negative Order .....	364
6.4	Iterative Solvers for Equations of Positive Order .....	367
6.4.1	Integral Equations of Positive Order .....	367
6.4.2	Iterative Methods .....	370
6.4.3	Multi-grid Methods .....	374
6.4.3.1	Motivation .....	375
6.4.3.2	Multi-grid Method for Integral Equations of Positive Order .....	378
6.4.3.3	Nested Iterations .....	381
6.4.3.4	Convergence Analysis for Multi-grid Methods ...	382
6.5	Multi-grid Methods for Equations of Negative Order .....	399
6.6	Further Remarks and Results on Iterative Solvers of BIEs .....	402

<b>7</b>	<b>Cluster Methods</b> .....	403
7.1	The Cluster Algorithm.....	404
7.1.1	Conditions on the Integral Operator.....	404
7.1.2	Cluster Tree and Admissible Covering .....	405
7.1.3	Approximation of the Kernel Function .....	409
7.1.3.1	Čebyšev Interpolation .....	410
7.1.3.2	Multipole Expansion .....	414
7.1.3.3	Abstract Cluster Approximation.....	415
7.1.4	The Matrix-Vector Multiplication in the Cluster Format....	416
7.1.4.1	Computation the Far-Field Coefficients .....	420
7.1.4.2	Cluster-Cluster Interaction .....	421
7.1.4.3	Evaluating the Cluster Approximation of a Matrix-Vector Multiplication .....	421
7.1.4.4	Algorithmic Description of the Cluster Method .....	423
7.2	Realization of the Subalgorithms .....	425
7.2.1	Algorithmic Realization of the Čebyšev Approximation ...	425
7.2.2	Expansion with Variable Order.....	431
7.3	Error Analysis for the Cluster Method.....	433
7.3.1	Local Error Estimates .....	433
7.3.1.1	Local Error Estimates for the Čebyšev Interpolation .....	433
7.3.2	Global Error Estimates.....	448
7.3.2.1	$L^2$ -Estimate for the Clustering Error Without Integration by Parts .....	449
7.3.2.2	$L^2$ -Estimates for the Cluster Method with Integration by Parts .....	452
7.3.2.3	Stability and Consistency of the Cluster Method .....	453
7.4	The Complexity of the Cluster Method.....	454
7.4.1	Number of Clusters and Blocks .....	455
7.4.2	The Algorithmic Complexity of the Cluster Method .....	460
7.5	Cluster Method for Collocation Methods.....	463
7.6	Remarks and Additional Results .....	464
<b>8</b>	<b><math>p</math>-Parametric Surface Approximation</b> .....	467
8.1	Discretization of Boundary Integral Equations with Surface Approximations .....	467
8.1.1	$p$ -Parametric Surface Meshes for Globally Smooth Surfaces .....	467
8.1.2	$(k, p)$ -Boundary Element Spaces with $p$ -Parametric Surface Approximation .....	471

8.1.3	Discretization of Boundary Integral Equations with $p$ -Parametric Surface Approximation .....	472
8.2	Convergence Analysis .....	475
8.3	Overview of the Orders of the $p$ -Parametric Surface Approximations .....	495
8.4	Elementary Differential Geometry .....	498
<b>9</b>	<b>A Posteriori Error Estimation .....</b>	<b>517</b>
9.1	Preliminaries .....	518
9.2	Local Error Indicators and A Posteriori Error Estimators .....	521
9.2.1	Operators of Negative Order .....	521
9.2.2	Operators of Non-negative Order .....	523
9.3	Proof of Efficiency and Reliability .....	523
9.3.1	Analysis of Operators of Negative Order .....	524
9.3.2	Analysis of Operators of Non-negative Order .....	534
9.3.3	Bibliographical Remarks, Further Results and Open Problems .....	543
	<b>References .....</b>	<b>545</b>
