

Contents

1	Introduction	1
Part I Fundamentals		
2	Optimization Problems	7
2.1	Solution Process	8
2.1.1	Recognizing Problems	9
2.1.2	Defining Problems	9
2.1.3	Constructing Models	10
2.1.4	Solving Models	11
2.1.5	Validating Solutions	12
2.1.6	Implementing Solutions	13
2.2	Problem Instances	13
2.3	Search Spaces	15
2.3.1	Metrics	16
2.3.2	Neighborhoods	18
2.3.3	Fitness Landscapes	21
2.3.4	Optimal Solutions	21
2.4	Properties of Optimization Problems	22
2.4.1	Problem Difficulty	23
2.4.2	Locality	30
2.4.3	Decomposability	36
3	Optimization Methods	45
3.1	Analytical and Numerical Optimization Methods	46
3.2	Optimization Methods for Linear, Continuous Problems	50
3.2.1	Linear Optimization Problems	51
3.2.2	Simplex Method	52
3.2.3	Simplex and Interior Point Methods	56
3.3	Optimization Methods for Linear, Discrete Problems	58
3.3.1	Integer Linear Problems	58

3.3.2	Uninformed and Informed Search	61
3.3.3	Branch and Bound Methods	68
3.3.4	Dynamic Programming	73
3.3.5	Cutting Plane Methods	78
3.4	Heuristic Optimization Methods	82
3.4.1	Heuristics	85
3.4.2	Approximation Algorithms	88
3.4.3	Modern Heuristics	91
3.4.4	No-Free-Lunch Theorem	97

Part II Modern Heuristics

4	Design Elements	105
4.1	Using Modern Heuristics	106
4.2	Representation	108
4.2.1	Genotypes and Phenotypes	108
4.2.2	Genotype and Phenotype Space	110
4.2.3	Benefits of Representations	111
4.2.4	Standard Genotypes	111
4.3	Search Operator	113
4.3.1	General Design Guidelines	113
4.3.2	Local Search Operators	115
4.3.3	Recombination Operators	117
4.3.4	Direct Representations	120
4.3.5	Standard Search Operators	122
4.4	Fitness Function	124
4.5	Initialization	127
5	Search Strategies	131
5.1	Local Search Methods	132
5.1.1	Variable Neighborhood Search	134
5.1.2	Guided Local Search	137
5.1.3	Iterated Local Search	139
5.1.4	Simulated Annealing and Tabu Search	140
5.1.5	Evolution Strategy	142
5.2	Recombination-Based Search Methods	145
5.2.1	Genetic Algorithms	147
5.2.2	Estimation of Distribution Algorithms	151
5.2.3	Genetic Programming	153
6	Design Principles	157
6.1	High Locality	158
6.1.1	Search Operator	159
6.1.2	Representation	161
6.2	Biasing Modern Heuristics	164
6.2.1	Incorporating Construction Heuristics in Representations ...	165

6.2.2	Redundant Representation	167
6.2.3	Search Operator	170

Part III Case Studies

7	High Locality Representations for Automated Programming	175
7.1	Grammatical Evolution	176
7.2	Test Problems	178
7.3	Locality of Grammatical Evolution	178
7.4	Influence of Locality on GE Performance	181
8	Biased Modern Heuristics for the OCST Problem	185
8.1	The Optimal Communication Spanning Tree Problem	186
8.1.1	Problem Description	186
8.1.2	Existing Solution Approaches	187
8.1.3	Bias of OCST Problems	189
8.2	Biasing Modern Heuristics for OCST Problems	194
8.3	Search Operator	195
8.3.1	Search Operators of the Edge-Set Encoding	196
8.3.2	Bias	198
8.3.3	Performance Results	202
8.4	Representation	207
8.4.1	The Link-Biased Encoding	207
8.4.2	Experimental Results	209
8.5	Initialization	215
8.5.1	Using an MST as Initial Solution	216
8.5.2	Experimental Results	217
9	Summary	221
	References	227
	Nomenclature	257
	Glossary	261
	Index	263
