Preface XII

1 Contractional theory, continental drift and plate tectonics 1

Plate tectonics – a change in the paradigm of the geosciences	1
Early history of geodynamic thought	1
From continental drift to plate tectonics	2
The plate tectonic concept	4
The pattern of magnetic polarity stripes	8
Plate motions and earthquake zones	8
Two kinds of continental margins	11
Magmatism and plate tectonics	11
What drives the plates and what slows them down?	12
Collision and mountain building	12

2 Plate movements and their geometric relationships 15

Helpful transform faults	15
Relative movements and triple junctions	16
<i>Two RTF triple junctions off North America</i>	18
Relative plate velocities – past and present	20
Direct measurement of plate movements	21
Apparent contradictions in the plate motion pattern	22
<i>Fault-plane-solutions of earthquakes</i>	23
<i>Seismic tomography</i>	25

3 Continental graben structures 27

<i>Active and passive graben structures</i>	28
Symmetric and asymmetric crustal extension	28

Sediments and ore deposits in graben structures	29
Volcanism in graben structures	30
The Upper Rhine Graben in Germany	31
The history of the Upper Rhine Graben	32
<i>The Upper Rhine Graben in the Middle European stress field</i>	33
Magmatism and heat flow in the Upper Rhine Graben	34
The large East African rift system	34
<i>The Afar Depression</i>	37
The Red Sea – from rift to drift	37
The extensional area of the Basin and Range Province	39
The development of metamorphic domes	40
A brief history of the Basin and Range Province	41

4 Passive continental margins and abyssal plains 43

Continuous subsidence of the continental margins	43
The sedimentary trap at a passive continental margin	44
<i>Tracts of sequence stratigraphy</i>	45
Processes on continental margins	46
Petroleum deposits – the economic significance of passive continental margins	48
The Atlantic – an ocean opens in an intricate manner	48
<i>Pangaea and Panthalassa</i>	49
The large abyssal plains	51
Sediments of the abyssal plains	52
<i>Manganese nodules from the deep sea</i>	54
Facies changes on the large oceanic conveyor belt	55
<i>The Bengal deep sea fan</i>	56

5 Mid-ocean ridges 59

Topography of the ridges 59

Generation of oceanic lithosphere 60

Rocks of the oceanic crust 61

Pillow lavas 62

Seismic layers 64

Basalts of mid-ocean ridges 65

Fast and slow spreading ridges and rocks
of the lithospheric mantle 65

Segmentation of ridges by faults 67

Graben formation in the Atlantic 67

*An oceanic crustal profile in the
Atlantic Ocean* 68

Black and white smokers 68

Ocean floor metamorphism 70

Chromite deposits 71

Ophiolites 71

The ophiolite of the Semail Nappe in Oman 72

Metamorphic sole 72

Alpine-Mediterranean ophiolites 72

6 Hot spots 75

Hot spots and mid-ocean ridges 77

The mysterious D" layer and the dented
Earth 77

Hot spots of Pangaea 78

Hot spot tracks in the ocean 80

A guyot evolves 82

Hot spot tracks on the continent 82

Flood and trap basalts 84

The Azores – hot, cold or wet spot? 85

Hawaii – a typical oceanic hot spot 86

Iceland 87

Yellowstone 87

The superplume event in the Cretaceous 88

7 Subduction zones, island arcs and active continental margins 91

Structure of plate margin systems with
subduction zones 91

Spontaneous and forced subduction:
Mariana- and Chile-type subduction 93

*What is the reason for the arcuate
shape of island arcs?* 94

Deep sea trenches as sediment traps 96

Accretionary wedge and outer ridge 97

*The accretionary wedge of the
Sunda Arc* 99

Subduction erosion instead of accretion 100

Mud volcanoes 101

The forearc basin 103

Earthquakes and Benioff zones 103

The Shigatse Flysch in Tibet 104

The secret of deep earthquakes 107

High-pressure or subduction
metamorphism 109

*Ultrahigh-pressure metamorphic
rocks* 111

Rapid burial, rapid uplift 112

Subduction-related magmatism
– a paradox? 113

Rocks of the magmatic zone 114

Zonation of magmas in space and time 116

Explosive stratovolcanoes as indicators for
subduction magmatism 117

*Isotopic signatures and the influence
of continental crust* 118

Metamorphism in the magmatic belt 119

Paired metamorphic belts 119

Ore deposits in the magmatic belt 120

The backarc basin 120

Splitting of intra-oceanic island arcs 122

Gravity and heat flow 122

Subduction and collision 122

8 Transform faults	123	12 Old orogens	159
Oceanic transform faults	123	2500–2000 million years old ophiolites	159
Fracture zones in the ocean floor	123	The Wopmay orogen in Canada	160
Continental transform faults	125	The Grenville orogenic cycle and the formation of the supercontinent Rodinia	160
San Andreas – the infamous transform fault of California	127	The Panafrican orogeny and the formation of Gondwana	160
The North Anatolian Fault in Asia Minor and the Alpine Fault in New Zealand	129	The Caledonides – a Wilson cycle around the Iapetus Ocean	161
9 Terranes	131	<i>The significance of Scotland and the Greek mythology</i>	162
Documenting terranes	132	The Variscides – a broad mountain belt in central Europe	163
Terranes in the North American Cordillera	134	<i>A Variscan suture in the southern Black Forest</i>	165
Suspect terranes in Mexico and Middle America	138	The Variscan orogen in the Alps	165
10 Early Precambrian plate tectonics	139	Paleozoic mountain building in eastern and southern North America	167
<i>The oldest rocks and minerals</i>	140	<i>How many orogenies?</i>	169
Greenstone-granite belts	141	13 Young orogens – the Earth's loftiest places	171
Granulite-gneiss belts	143	The Himalayas – a mountain range with superlatives	172
<i>Komatiites</i>	144	Tectonic history of the Himalayas	172
Towards an Archean plate tectonic model	145	<i>Nanga Parbat and Namche Barwa syntaxis</i>	174
The growth of continents	146	The Alps – an untypical but classic orogen	174
Possible younger equivalents of greenstone- granite belts	147	Brief history of Alpine evolution	176
<i>The Great Dike of Zimbabwe</i>	147	<i>Lateral tectonic extrusion in the Alps</i>	178
11 Plate tectonics and mountain building	149	The North American Cordillera – a different style of orogen	179
Types of active continental margins within orogenic styles	149	Laramide Rocky Mountains – an orogenic mystery solved	185
Continent-continent collision	152	Epilog	187
Uplift, erosion, and elevation of mountains ...	154	Glossary	189
Collapse and crustal escape	158	References	199
		Keyword Index	207
