<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Theoretical and Experimental Modeling	1
1.2	Tasks and Problems for the Identification of Dynamic Systems	7
1.3	Taxonomy of Identification Methods and Their Treatment in This Book	12
1.4	Overview of Identification Methods	15
1.4.1	Non-Parametric Models	15
1.4.2	Parametric Models	18
1.4.3	Signal Analysis	19
1.5	Excitation Signals	21
1.6	Special Application Problems	23
1.6.1	Noise at the Input	23
1.6.2	Identification of Systems with Multiple Inputs or Outputs	23
1.7	Areas of Application	24
1.7.1	Gain Increased Knowledge about the Process Behavior	24
1.7.2	Validation of Theoretical Models	25
1.7.3	Tuning of Controller Parameters	25
1.7.4	Computer-Based Design of Digital Control Algorithms	25
1.7.5	Adaptive Control Algorithms	26
1.7.6	Process Supervision and Fault Detection	26
1.7.7	Signal Forecast	26
1.7.8	On-Line Optimization	28
1.8	Bibliographical Overview	28
	Problems	29
	References	30
<b>2</b>	<b>Mathematical Models of Linear Dynamic Systems and Stochastic Signals</b>	<b>33</b>
2.1	Mathematical Models of Dynamic Systems for Continuous Time Signals	33
2.1.1	Non-Parametric Models, Deterministic Signals	34

2.1.2	Parametric Models, Deterministic Signals .....	37
2.2	Mathematical Models of Dynamic Systems for Discrete Time Signals .....	39
2.2.1	Parametric Models, Deterministic Signals .....	39
2.3	Models for Continuous-Time Stochastic Signals .....	45
2.3.1	Special Stochastic Signal Processes .....	51
2.4	Models for Discrete Time Stochastic Signals .....	54
2.5	Characteristic Parameter Determination .....	58
2.5.1	Approximation by a First Order System .....	59
2.5.2	Approximation by a Second Order System .....	60
2.5.3	Approximation by $n^{\text{th}}$ Order Delay with Equal Time Constants .....	63
2.5.4	Approximation by First Order System with Dead Time .....	68
2.6	Systems with Integral or Derivative Action .....	69
2.6.1	Integral Action .....	69
2.6.2	Derivative Action .....	70
2.7	Summary .....	71
	Problems .....	71
	References .....	72

---

## **Part I IDENTIFICATION OF NON-PARAMETRIC MODELS IN THE FREQUENCY DOMAIN — CONTINUOUS TIME SIGNALS**

---

<b>3</b>	<b>Spectral Analysis Methods for Periodic and Non-Periodic Signals .....</b>	<b>77</b>
3.1	Numerical Calculation of the Fourier Transform .....	77
3.1.1	Fourier Series for Periodic Signals .....	77
3.1.2	Fourier Transform for Non-Periodic Signals .....	78
3.1.3	Numerical Calculation of the Fourier Transform .....	82
3.1.4	Windowing .....	88
3.1.5	Short Time Fourier Transform .....	89
3.2	Wavelet Transform .....	91
3.3	Periodogram .....	93
3.4	Summary .....	95
	Problems .....	96
	References .....	97
<b>4</b>	<b>Frequency Response Measurement with Non-Periodic Signals .....</b>	<b>99</b>
4.1	Fundamental Equations .....	99
4.2	Fourier Transform of Non-Periodic Signals .....	100
4.2.1	Simple Pulses .....	100
4.2.2	Double Pulse .....	104
4.2.3	Step and Ramp Function .....	106
4.3	Frequency Response Determination .....	108
4.4	Influence of Noise .....	109
4.5	Summary .....	117

Problems .....	119
References .....	119
<b>5 Frequency Response Measurement for Periodic Test Signals .....</b>	<b>121</b>
5.1 Frequency Response Measurement with Sinusoidal Test Signals ...	122
5.2 Frequency Response Measurement with Rectangular and Trapezoidal Test Signals .....	124
5.3 Frequency Response Measurement with Multi-Frequency Test Signals .....	126
5.4 Frequency Response Measurement with Continuously Varying Frequency Test Signals .....	128
5.5 Frequency Response Measurement with Correlation Functions ....	129
5.5.1 Measurement with Correlation Functions .....	129
5.5.2 Measurement with Orthogonal Correlation .....	134
5.6 Summary .....	144
Problems .....	144
References .....	144

---

**Part II IDENTIFICATION OF NON-PARAMETRIC MODELS WITH CORRELATION ANALYSIS — CONTINUOUS AND DISCRETE TIME**

---

<b>6 Correlation Analysis with Continuous Time Models .....</b>	<b>149</b>
6.1 Estimation of Correlation Functions .....	149
6.1.1 Cross-Correlation Function .....	150
6.1.2 Auto-Correlation Function .....	153
6.2 Correlation Analysis of Dynamic Processes with Stationary Stochastic Signals .....	154
6.2.1 Determination of Impulse Response by Deconvolution ....	154
6.2.2 White Noise as Input Signal .....	157
6.2.3 Error Estimation .....	158
6.2.4 Real Natural Noise as Input Signal .....	161
6.3 Correlation Analysis of Dynamic Processes with Binary Stochastic Signals .....	161
6.4 Correlation Analysis in Closed-Loop .....	175
6.5 Summary .....	176
Problems .....	177
References .....	177
<b>7 Correlation Analysis with Discrete Time Models .....</b>	<b>179</b>
7.1 Estimation of the Correlation Function .....	179
7.1.1 Auto-Correlation Function .....	179
7.1.2 Cross-Correlation Function .....	181
7.1.3 Fast Calculation of the Correlation Functions .....	184
7.1.4 Recursive Correlation .....	189

7.2	Correlation Analysis of Linear Dynamic Systems .....	190
7.2.1	Determination of Impulse Response by De-Convolution ....	190
7.2.2	Influence of Stochastic Disturbances .....	195
7.3	Binary Test Signals for Discrete Time .....	197
7.4	Summary .....	199
	Problems .....	199
	References .....	200

---

### **Part III IDENTIFICATION WITH PARAMETRIC MODELS — DISCRETE TIME SIGNALS**

---

<b>8</b>	<b>Least Squares Parameter Estimation for Static Processes .....</b>	<b>203</b>
8.1	Introduction .....	203
8.2	Linear Static Processes .....	205
8.3	Non-Linear Static Processes .....	210
8.4	Geometrical Interpretation .....	212
8.5	Maximum Likelihood and the Cramér-Rao Bound .....	215
8.6	Constraints .....	218
8.7	Summary .....	218
	Problems .....	219
	References .....	220
<b>9</b>	<b>Least Squares Parameter Estimation for Dynamic Processes .....</b>	<b>223</b>
9.1	Non-Recursive Method of Least Squares (LS) .....	223
9.1.1	Fundamental Equations .....	223
9.1.2	Convergence .....	229
9.1.3	Covariance of the Parameter Estimates and Model Uncertainty .....	236
9.1.4	Parameter Identifiability .....	246
9.1.5	Unknown DC Values .....	255
9.2	Spectral Analysis with Periodic Parametric Signal Models .....	257
9.2.1	Parametric Signal Models in the Time Domain .....	257
9.2.2	Parametric Signal Models in the Frequency Domain .....	258
9.2.3	Determination of the Coefficients .....	259
9.2.4	Estimation of the Amplitudes .....	261
9.3	Parameter Estimation with Non-Parametric Intermediate Model ....	262
9.3.1	Response to Non-Periodic Excitation and Method of Least Squares .....	262
9.3.2	Correlation Analysis and Method of Least Squares (COR-LS) .....	264
9.4	Recursive Methods of Least Squares (RLS) .....	269
9.4.1	Fundamental Equations .....	270
9.4.2	Recursive Parameter Estimation for Stochastic Signals ....	276
9.4.3	Unknown DC values .....	278
9.5	Method of weighted least squares (WLS) .....	279

9.5.1	Markov Estimation .....	279
9.6	Recursive Parameter Estimation with Exponential Forgetting .....	281
9.6.1	Constraints and the Recursive Method of Least Squares ....	283
9.6.2	Tikhonov Regularization .....	284
9.7	Summary .....	284
	Problems .....	285
	References .....	287
<b>10</b>	<b>Modifications of the Least Squares Parameter Estimation .....</b>	<b>291</b>
10.1	Method of Generalized Least Squares (GLS) .....	291
10.1.1	Non-Recursive Method of Generalized Least Squares (GLS) .....	291
10.1.2	Recursive Method of Generalized Least Squares (RGLS) ...	294
10.2	Method of Extended Least Squares (ELS) .....	295
10.3	Method of Bias Correction (CLS) .....	296
10.4	Method of Total Least Squares (TLS) .....	297
10.5	Instrumental Variables Method (IV) .....	302
10.5.1	Non-Recursive Method of Instrumental Variables (IV) ....	302
10.5.2	Recursive Method of Instrumental Variables (RIV) .....	305
10.6	Method of Stochastic Approximation (STA) .....	306
10.6.1	Robbins-Monro Algorithm .....	306
10.6.2	Kiefer-Wolfowitz Algorithm .....	307
10.7	(Normalized) Least Mean Squares (NLMS) .....	310
10.8	Summary .....	315
	Problems .....	316
	References .....	316
<b>11</b>	<b>Bayes and Maximum Likelihood Methods .....</b>	<b>319</b>
11.1	Bayes Method .....	319
11.2	Maximum Likelihood Method (ML) .....	323
11.2.1	Non-Recursive Maximum Likelihood Method .....	323
11.2.2	Recursive Maximum Likelihood Method (RML) .....	328
11.2.3	Cramér-Rao Bound and Maximum Precision .....	330
11.3	Summary .....	331
	Problems .....	331
	References .....	332
<b>12</b>	<b>Parameter Estimation for Time-Variant Processes .....</b>	<b>335</b>
12.1	Exponential Forgetting with Constant Forgetting Factor .....	335
12.2	Exponential Forgetting with Variable Forgetting Factor .....	340
12.3	Manipulation of Covariance Matrix .....	341
12.4	Convergence of Recursive Parameter Estimation Methods .....	343
12.4.1	Parameter Estimation in Observer Form .....	345
12.5	Summary .....	349
	Problems .....	350
	References .....	350

<b>13</b>	<b>Parameter Estimation in Closed-Loop</b>	353
13.1	Process Identification Without Additional Test Signals	354
13.1.1	Indirect Process Identification (Case a+c+e)	355
13.1.2	Direct Process Identification (Case b+d+e)	359
13.2	Process Identification With Additional Test Signals	361
13.3	Methods for Identification in Closed Loop	363
13.3.1	Indirect Process Identification Without Additional Test Signals	363
13.3.2	Indirect Process Identification With Additional Test Signals	364
13.3.3	Direct Process Identification Without Additional Test Signals	364
13.3.4	Direct Process Identification With Additional Test Signals	364
13.4	Summary	365
	Problems	365
	References	366

## **Part IV IDENTIFICATION WITH PARAMETRIC MODELS — CONTINUOUS TIME SIGNALS**

---

<b>14</b>	<b>Parameter Estimation for Frequency Responses</b>	369
14.1	Introduction	369
14.2	Method of Least Squares for Frequency Response Approximation (FR-LS)	370
14.3	Summary	374
	Problems	376
	References	376
<b>15</b>	<b>Parameter Estimation for Differential Equations and Continuous Time Processes</b>	379
15.1	Method of Least Squares	379
15.1.1	Fundamental Equations	379
15.1.2	Convergence	382
15.2	Determination of Derivatives	383
15.2.1	Numerical Differentiation	383
15.2.2	State Variable Filters	384
15.2.3	FIR Filters	391
15.3	Consistent Parameter Estimation Methods	393
15.3.1	Method of Instrumental Variables	393
15.3.2	Extended Kalman Filter, Maximum Likelihood Method	395
15.3.3	Correlation and Least Squares	395
15.3.4	Conversion of Discrete-Time Models	398
15.4	Estimation of Physical Parameters	399
15.5	Parameter Estimation for Partially Known Parameters	404
15.6	Summary	405
	Problems	406

References .....	406
<b>16 Subspace Methods .....</b>	<b>409</b>
16.1 Preliminaries .....	409
16.2 Subspace.....	413
16.3 Subspace Identification .....	414
16.4 Identification from Impulse Response.....	418
16.5 Some Modifications to the Original Formulations .....	419
16.6 Application to Continuous Time Systems.....	420
16.7 Summary .....	423
Problems .....	423
References .....	424

---

**Part V IDENTIFICATION OF MULTI-VARIABLE SYSTEMS**

---

<b>17 Parameter Estimation for MIMO Systems .....</b>	<b>429</b>
17.1 Transfer Function Models .....	429
17.1.1 Matrix Polynomial Representation .....	431
17.2 State Space Models .....	432
17.2.1 State Space Form .....	432
17.2.2 Input/Output Models .....	438
17.3 Impulse Response Models, Markov Parameters.....	439
17.4 Subsequent Identification .....	441
17.5 Correlation Methods .....	441
17.5.1 De-Convolution .....	441
17.5.2 Test Signals .....	442
17.6 Parameter Estimation Methods .....	443
17.6.1 Method of Least Squares .....	446
17.6.2 Correlation Analysis and Least Squares.....	446
17.7 Summary .....	447
Problems .....	449
References .....	449

---

**Part VI IDENTIFICATION OF NON-LINEAR SYSTEMS**

---

<b>18 Parameter Estimation for Non-Linear Systems .....</b>	<b>453</b>
18.1 Dynamic Systems with Continuously Differentiable Non-Linearities	453
18.1.1 Volterra Series.....	454
18.1.2 Hammerstein Model.....	455
18.1.3 Wiener Model .....	457
18.1.4 Model According to Lachmann .....	458
18.1.5 Parameter Estimation .....	458
18.2 Dynamic Systems with Non-Continuously Differentiable Non-Linearities .....	460

18.2.1	Systems with Friction	460
18.2.2	Systems with Dead Zone	464
18.3	Summary	465
	Problems	465
	References	466
<b>19</b>	<b>Iterative Optimization</b>	<b>469</b>
19.1	Introduction	469
19.2	Non-Linear Optimization Algorithms	471
19.3	One-Dimensional Methods	473
19.4	Multi-Dimensional Optimization	476
19.4.1	Zeroth Order Optimizers	477
19.4.2	First Order Optimizers	478
19.4.3	Second Order Optimizers	480
19.5	Constraints	484
19.5.1	Sequential Unconstrained Minimization Technique	484
19.6	Prediction Error Methods using Iterative Optimization	491
19.7	Determination of Gradients	494
19.8	Model Uncertainty	495
19.9	Summary	496
	Problems	498
	References	499

**Part VII MISCELLANEOUS ISSUES**

---

<b>22 Numerical Aspects .....</b>	<b>555</b>
22.1 Condition Numbers .....	555
22.2 Factorization Methods for $P$ .....	557
22.3 Factorization methods for $P^{-1}$ .....	558
22.4 Summary .....	562
Problems .....	562
References .....	563
<b>23 Practical Aspects of Parameter Estimation .....</b>	<b>565</b>
23.1 Choice of Input Signal .....	565
23.2 Choice of Sample Rate .....	567
23.2.1 Intended Application .....	568
23.2.2 Fidelity of the Resulting Model .....	568
23.2.3 Numerical Problems .....	569
23.3 Determination of Structure Parameters for Linear Dynamic Models .....	569
23.3.1 Determination of Dead Time .....	570
23.3.2 Determination of Model Order .....	572
23.4 Comparison of Different Parameter Estimation Methods .....	577
23.4.1 Introductory Remarks .....	577
23.4.2 Comparison of A Priori Assumptions .....	579
23.4.3 Summary of the Methods Governed in this Book .....	581
23.5 Parameter Estimation for Processes with Integral Action .....	586
23.6 Disturbances at the System Input .....	588
23.7 Elimination of Special Disturbances .....	590
23.7.1 Drifts and High Frequent Noise .....	590
23.7.2 Outliers .....	592
23.8 Validation .....	595
23.9 Special Devices for Process Identification .....	597
23.9.1 Hardware Devices .....	597
23.9.2 Identification with Digital Computers .....	598
23.10 Summary .....	598
Problems .....	599
References .....	599

---

**Part VIII APPLICATIONS**

---

<b>24 Application Examples</b>	605
24.1 Actuators	605
24.1.1 Brushless DC Actuators	606
24.1.2 Electromagnetic Automotive Throttle Valve Actuator	612
24.1.3 Hydraulic Actuators	617
24.2 Machinery	628
24.2.1 Machine Tool	628
24.2.2 Industrial Robot	633
24.2.3 Centrifugal Pumps	636
24.2.4 Heat Exchangers	639
24.2.5 Air Conditioning	644
24.2.6 Rotary Dryer	645
24.2.7 Engine Teststand	648
24.3 Automotive Vehicles	651
24.3.1 Estimation of Vehicle Parameters	651
24.3.2 Braking Systems	655
24.3.3 Automotive Suspension	663
24.3.4 Tire Pressure	667
24.3.5 Internal Combustion Engines	674
24.4 Summary	679
References	680

## Part IX APPENDIX

---

<b>A Mathematical Aspects</b>	685
A.1 Convergence for Random Variables	685
A.2 Properties of Parameter Estimation Methods	687
A.3 Derivatives of Vectors and Matrices	688
A.4 Matrix Inversion Lemma	689
References	690
<b>B Experimental Systems</b>	691
B.1 Three-Mass Oscillator	691
References	696
<b>Index</b>	697

Identification of Dynamic Systems

An Introduction with Applications

Isermann, R.; Münchhof, M.

2011, XXV, 705 p. With Based on the book: Isermann:

Identifikation dynamischer Systeme 1, 2. With online

files/update., Hardcover

ISBN: 978-3-540-78878-2
