

Contents

1	Necessary Basics: Elements, Isotopes, Ions, Chemical Reactions, Energy Metabolism, and Bacterial Structures	1
1.1.1.	Atomic Structure: Elements and Isotopes.....	1
1.1.2.	Isotopes Date Paleontology Samples Such as Teeth.....	4
1.1.3.	Isotopes Indicate Ancient Life Forms and Climate Changes.....	5
1.1.4.	The Elements in Biology	5
1.1.5.	Fluorides	6
1.2.1.	Chemical Bonds	6
1.2.2.	Electrostatic Bonds (Ions).....	6
1.2.3.	Covalent Bonds.....	7
1.2.4.	Polarized Covalent Bonds.....	7
1.2.5.	Hydrophobic Bonds	8
1.3.1.	Mechanisms of Energy Production: Respiration and Fermentation	9
1.3.2.	The Oral Microbiota, Dental Caries, and Periodontal Disease.....	10
1.4.1.	Bacterial Cell Structures	14
1.4.2.	Outer Surface of Bacteria.....	14
2	Photosynthesis and Sucrose Production	17
2.1.1.	Role of Photosynthesis in Living Organisms.....	17
2.1.2.	The Light Reaction	18
2.2.1.	The Dark Reaction.....	21
2.2.2.	Starch and Sucrose Provide the Carbon Skeletons of All Plant Compounds	24
2.2.3.	Plants Are Autotrophs.....	24
2.3.1.	Sucrose Is the Primary Transport Sugar and Plays a Central Role in Plant Growth and Development	26
3	The Connective Tissue Extracellular Matrix and Its Major Components	29
3.1.1.	Major Components of the Connective Tissue (Stromal) Matrix.....	29
3.1.2.	Collagen	30
3.1.3.	Elastic Fiber System	34

3.1.4.	Glycosaminoglycans	36
3.1.5.	Teeth, Alveolar Bone, and Periodontium.....	36
3.2.1.	Cell Surface Binding: Integrins, Fibronectin, and Collagen.....	40
3.2.2.	Thrombospondins	41
3.3.1.	Stromal Nutrition	43
3.3.2.	Stromal Turnover, Inflammation, and Bone Loss	44
4	Fibrillar and Non-fibrillar Collagens and Integrins.....	45
4.1.1.	Fibrillar Collagens	45
4.2.1.	Collagen Fiber Formation	50
4.2.2.	Fiber Cross-Linking: Formation of β - and γ -Tropocollagen	52
4.3.1.	The Collagen Superfamily	55
4.3.2.	Fiber-Modifying Non-fibrillar Collagens	55
4.3.3.	General Structure of Non-fibrous Collagens.....	56
4.3.4.	Beaded Collagen Filaments	56
4.4.1.	Integrin Signaling	58
5	Basal Laminas and Epithelia	65
5.1.1.	Basal Lamina	65
5.1.2.	Hemidesmosomes and Intermediate Filament Proteins.....	67
5.1.3.	Basal Lamina of the Dental Epithelial Attachment	71
5.2.1.	General Structure of Skin, Oral and Junctional Epithelia.....	73
5.2.2.	Protein Composition of Desmosomes.....	75
5.2.3.	Oral and Junctional Epithelium	76
6	Elastic Fibers and Proteoglycans.....	81
6.1.1.	Fibrillin	81
6.2.1.	Elastin	85
6.3.1.	Glycosaminoglycans.....	89
6.4.1.	Proteo-Glycosaminoglycan Core Proteins and Cartilage Collagens	95
6.5.1.	Major Collagen–Glycosaminoglycan Interactions	98
7	Collagen Synthesis, Genetic Diseases, and Scurvy.....	101
7.1.1.	Intracellular Collagen Synthesis	101
7.2.1.	Effects of Collagen Polypeptide Mutations	104
7.2.2.	Ehlers-Danlos Syndrome (EDS).....	105
7.3.1.	Ascorbate and Antioxidants.....	109
8	The Zincins: Collagen Fiber Processing and Degradation	113
8.1.1.	The Zincin Enzyme Family	113
8.1.2.	Catalytic Action of the Metzincin Family	115
8.1.3.	Metzincin Activation	117
8.2.1.	Fibrillar Procollagen Processing.....	120
8.3.1.	Matrilysins: Degradation of Collagen and Stromal Proteins	124
8.3.2.	Stromelysins.....	126

8.3.3. Enamelysin.....	126
8.3.4. Collagenases and Gelatinases	127
9 Biological Mineralization	129
9.1.1. Fundamental Properties of Calcium Phosphate Precipitation.....	129
9.1.2. Nature of the Apatite Precipitate.....	130
9.1.3. Apatite Crystal Substitutions Influence Bone Strength and Solubility	131
9.1.4. Nucleation.....	131
9.2.1. The Structures of Bone, Dentin, and Cementum	132
9.2.2. Two Mechanisms of Mineralization	134
9.3.1. Secretion of Osteoid Matrix.....	134
9.3.2. Osteoclast Transport of Calcium and Phosphate Ions to Matrix Vesicles	136
9.3.3. Calcium and Phosphate Ions Precipitate and Rupture Secreted Matrix Vesicles.....	138
9.3.4. Structure of the Calcium Transporter Proteins in Matrix Vesicles	138
9.3.5. The Phosphate Transporter Proteins and Pyrophosphate in Matrix Vesicles	140
9.4.1. SIBLING Proteins, Phex Gene Function, and Hypophosphatemia	142
9.4.2. Osteocalcin Is Required for Bone Modeling	143
9.5.1. Enamel Organ and Matrix Development	144
9.5.2. Proteins Involved in Enamel Synthesis	146
9.5.3. Proposed Mechanism of Enamel Synthesis	147
9.6.1. Summary of Ways in Which Enamel and Bone Differ	150
9.6.2. Summary of the Vitamins for Bone and Enamel Formation.....	151
10 Bone Remodeling and Calcium Metabolism	153
10.1.1. Bone Turnover, Osteoclasts, and Lysosomes.....	153
10.1.2. Proteolysis in the Bone Resorbing Compartment.....	157
10.1.3. Demineralization and Remineralization	157
10.1.4. Osteoclast Ion and Proton Transport.....	159
10.2.1. Osteoclast Differentiation	160
10.2.2. Osteoclasts and Inflammation	161
10.2.3. Osteoporosis: Major Causes and Therapies.....	163
10.3.1. Calcium Metabolism, Parathyroid Hormone, and Calcitriol	165
10.4.1. Vitamin D, Calcitriol, and Calbindins.....	168
10.4.2. Rickets and Osteomalacia	171
10.5.1. Actions of Calcitonin	172
10.5.2. Calcitonin and PTH Therapy for Osteoporosis.....	173
11 Blood Coagulation.....	175
11.1.1. The Vascular System.....	175
11.1.2. Bleeding and Blood Clotting Problems	176

11.2.1. Blood Vessel Injury, von Willebrand Factor, and Platelets.....	178
11.2.2. The Gamma- (γ -) Carboxyglutamate (gla) Domain: A Calcium Ion Chelator.....	180
11.3.1. The Extrinsic, Intrinsic, and Common Coagulation Pathways.....	183
11.3.2. The Extrinsic Pathway.....	183
11.3.3. The Intrinsic Pathway.....	185
11.3.4. The Common Pathway.....	185
11.3.5. The Hemophiliac (Excessive Bleeding Diseases).....	187
11.4.1. The Fibrin Blood Clot: Production and Prevention.....	188
11.4.2. Removal of a Blood Clot.....	190
11.5.1. Prevention of Unwanted Blood Clotting.....	192
11.5.2. Protein S, Factor V and Factor VIII Mutations.....	194
11.6.1. Drugs to Remove a Pathogenic Thrombus or Embolus: “Clot Busters”.....	195
11.6.2. Drugs That Inhibit Excessive Clot Formation.....	197
11.6.3. Drugs That Retard Clot Formation.....	197
11.6.4. Drugs That Inhibit Platelet Activation.....	198
11.6.5. Drugs That Promote Clotting.....	198
11.6.6. Laboratory Tests to Determine the State of the Blood Clotting System.....	199
12 Saliva.....	203
12.1.1. Cell Biology of Salivary Glands.....	203
12.1.2. Whole Saliva: Collection and Composition.....	203
12.1.3. Functions of the Salivary Components.....	205
12.1.4. Innate and Acquired Immune Proteins in Saliva.....	207
12.1.5. Poor Oral Hygiene Adds Bacteria and Host Leukocyte Products to Saliva.....	208
12.2.1. Physiology and Biochemistry of Saliva Secretion.....	209
12.3.1. Salivary Mucin Composition.....	211
12.3.2. Glycan Composition of Salivary Mucins.....	213
12.4.1. Mucin Glycans, ABO Antigens, and Forensic Dentistry.....	216
12.5.1. Amylase: Substrates, Products, and Mode of Action.....	219
12.5.2. Mechanism of Action of Salivary Amylase.....	221
12.5.3. Detection of Salivary and Pancreatic Amylase.....	225
12.6.1. Proline-Rich Proteins.....	227
12.6.2. Salivary Agglutinin.....	228
13 Chronic Periodontitis.....	231
13.1.1. Detecting Periodontal Disease.....	231
13.1.2. Microbiota in Gingivitis and Chronic Periodontitis.....	232
13.1.3. Drugs and Tooth Cleaning to Prevent Gingivitis.....	236
13.2.1. Mammalian Cells Recognize Prokaryotic Molecules.....	237
13.2.2. PAMPs Induce PRRs to Release Cytokines That Attract Leukocytes.....	238
13.2.3. IL-1 Induces Gingival Inflammation.....	241
13.2.4. Neutrophils Function in Tissue Destruction.....	241

13.2.5. Gingivitis is Reversible; Antiinflammatory Cytokines Mediate Repair	243
13.3.1. Monocytes Are Converted to Macrophages That Over-Activate Collagenase.....	244
13.4.1. Apoptosis in Chronic Periodontitis.....	246
13.4.2. Intracellular Induction of Apoptosis.....	247
13.4.3. Mechanisms of Apoptosis.....	249
13.5.1. Eicosanoids and Periodontal Repair	252
13.5.2. Eicosanoid Structure	252
13.5.3. Functions of the Proinflammatory Eicosanoids	255
13.5.4. Lipoygenase-Mediated Resolution of Inflammation	255
13.5.5. Antiinflammatory Drugs	257
14 Aggressive Periodontitis	259
14.1.1. Generalized Aggressive Periodontitis.....	259
14.2.1. Localized Aggressive Periodontitis	260
14.2.2. Aa Leukotoxin Composition and Properties.....	261
14.2.3. Mutations Enhance Aa Ltx and LAP Severity.....	263
14.2.4. Cytolethal Distending Toxin (Cdt).....	264
15 Dental Caries	267
15.1.1. Dental Caries: Definition and Measurement.....	267
15.1.2. Sugar, Dental Caries, and the Dental Profession	267
15.1.3. Sucrose and the Appearance of Acid in Dental Biofilms	269
15.1.4. Cavities in Animals and <i>Streptococcus mutans</i>	270
15.2.1. How Sucrose Connects <i>S. mutans</i> to the Oral Microbiota and Dental Caries.....	272
15.2.2. Sources of Bacterial Lactic Acid in Caries.....	277
15.2.3. Dentinal (Advanced) Dental Caries	277
15.3.1. Variation in Individual Human Caries Experience	278
15.3.2. Bacterial Causes of the Variation in Caries Susceptibility	279
15.3.3. Saliva Causes of Caries Susceptibility.....	281
15.3.4. Caries Immunity and Susceptibility.....	282
16 Fluoride.....	285
16.1.1. Properties of Fluorine and Fluoride.....	285
16.1.2. How Mottled Enamel Was Related to Fluoride in the Water Supply.....	286
16.1.3. Mottled Enamel Is Moderate to Severe Enamel Fluorosis	287
16.1.4. Identification of 1 ppm Fluoride in the Water as Optimal for Cavity Protection.....	289
16.2.1. Mechanisms of Fluoride Protection from Caries.....	291
16.2.2. How Fluoride Protects from Caries	292
16.3.1. Systemic Effects of Fluoride.....	294
16.3.2. Fluoride Toxicity.....	295
Index.....	299
