

Contents

1	Physical Activity and Cancer: An Introduction	1
	Kerry S. Courneya and Christine M. Friedenreich	
1.1	Physical Activity, Exercise, and Health-Related Fitness	2
1.2	Content and Organization of the Volume	2
1.3	Methodological Issues in Physical Activity and Cancer Research	3
1.4	Summary of Physical Activity and Cancer Prevention Chapters.	4
1.5	Summary of Physical Activity and Cancer Survivorship Chapters.	6
1.6	Summary of Physical Activity and Cancer Special Topic Chapters.	7
1.7	Future Research Directions for Physical Activity and Cancer Research	8
1.8	Overall Summary and Conclusions.	9
	References.	9

Part I Physical Activity and Cancer Prevention

2	Physical Activity and Breast Cancer Prevention	13
	Brigid M. Lynch, Heather K. Neilson, and Christine M. Friedenreich	
2.1	Epidemiologic Evidence	13
2.1.1	Background	13
2.1.2	Overall Associations Between Physical Activity and Breast Cancer Risk	14
2.1.3	Type, Dose, and Timing of Activity	17
2.1.4	Population Subgroups	20
2.1.5	Summary of Epidemiologic Findings	27
2.2	Biologic Mechanisms	28
2.2.1	Sex Hormones	30

2.2.2	Insulin-Related Factors	32
2.2.3	Adipokines and Inflammation	33
2.2.4	Other Mechanisms.	34
2.3	Conclusion.	34
	References	35
3	Physical Activity and Genitourinary Cancer Prevention	43
	Michael F. Leitzmann	
3.1	Epidemiologic Evidence	43
3.1.1	Methods.	43
3.2	Prostate Cancer	44
3.2.1	Background	44
3.2.2	Epidemiologic Studies of Physical Activity and Prostate Cancer.	44
3.2.3	Overall Association Between Physical Activity and Total Prostate Cancer Risk	45
3.2.4	Type of Physical Activity and Total Prostate Cancer Risk	46
3.2.5	Dose of Physical Activity in Relation to Total Prostate Cancer Risk	48
3.2.6	Timing of Physical Activity in Relation to Total Prostate Cancer Risk	49
3.2.7	Physical Activity and Total Prostate Cancer Risk in Population Subgroups	50
3.2.8	Summary of Epidemiologic Findings on Physical Activity and Prostate Cancer.	52
3.3	Bladder Cancer	53
3.3.1	Background	53
3.3.2	Epidemiologic Studies of Physical Activity and Bladder Cancer.	53
3.3.3	Overall Association Between Physical Activity and Bladder Cancer Risk	53
3.3.4	Type of Physical Activity and Bladder Cancer Risk.	54
3.3.5	Dose of Physical Activity in Relation to Bladder Cancer Risk	55
3.3.6	Timing of Physical Activity in Relation to Bladder Cancer Risk	55
3.3.7	Physical Activity and Bladder Cancer Risk in Population Subgroups	55
3.3.8	Summary of Epidemiologic Findings on Physical Activity and Bladder Cancer.	56
3.4	Renal Cell Cancer	56
3.4.1	Background	56
3.4.2	Epidemiologic Studies of Physical Activity and RCC	56
3.4.3	Overall Association Between Physical Activity and RCC Risk	57

3.4.4	Type of Physical Activity and RCC Risk	57
3.4.5	Dose of Physical Activity in Relation to RCC Risk	59
3.4.6	Timing of Physical Activity in Relation to RCC Risk	60
3.4.7	Physical Activity and RCC Risk in Population Subgroups.	60
3.4.8	Summary of Epidemiologic Findings on Physical Activity and RCC	61
3.5	Testicular Cancer.	61
3.5.1	Background	61
3.5.2	Epidemiologic Studies of Physical Activity and Testicular Cancer	62
3.5.3	Overall Association Between Physical Activity and Testicular Cancer Risk	62
3.5.4	Type of Physical Activity and Testicular Cancer Risk	63
3.5.5	Dose of Physical Activity in Relation to Testicular Cancer Risk	63
3.5.6	Timing of Physical Activity in Relation to Testicular Cancer Risk	64
3.5.7	Physical Activity and Testicular Cancer Risk by Tumor Histology	64
3.5.8	Summary of Epidemiologic Findings on Physical Activity and Testicular Cancer	64
3.6	Limitations of Epidemiologic Studies of Physical Activity and Genitourinary Cancers	65
3.7	Biological Mechanisms Relating Physical Activity to Genitourinary Cancers	65
3.7.1	Prostate Cancer	65
3.7.2	Bladder Cancer	66
3.7.3	Renal Cell Cancer	66
3.7.4	Testicular Cancer.	66
3.8	Future Directions.	67
	References.	67
4	Physical Activity and Gastrointestinal Cancer Prevention	73
	Kathleen Y. Wolin and Hallie Tuchman	
4.1	Introduction.	73
4.2	Methods.	74
4.3	Colon Cancer.	75
4.3.1	Type of Physical Activity	76
4.3.2	Dose of Physical Activity	78
4.3.3	Timing of Physical Activity	79
4.3.4	Population Subgroup Analyses	80
4.3.5	Colon Sub-site.	81
4.3.6	Colonic Adenomas	82
4.4	Rectal Cancer	83
4.5	Gastric Cancer.	84

4.5.1	Type of Physical Activity	85
4.5.2	Dose of Physical Activity	86
4.5.3	Gastric Subsite.	87
4.6	Biologic Mechanisms	87
4.7	Conclusion.	90
	References	90
5	Physical Activity and Lung Cancer Prevention	101
	Aina Emaus and Inger Thune	
5.1	Introduction	101
5.2	Epidemiologic Studies of Physical Activity and Lung Cancer	103
5.2.1	Overall Results	103
5.2.2	Subgroup Results.	104
5.3	Hypothesized Biologic Mechanisms Relating Physical Activity to Lung Cancer	127
5.4	Main Findings and Further Implications.	129
	References	130
6	Physical Activity and Hematologic Cancer Prevention	135
	Sai Yi Pan and Howard Morrison	
6.1	Introduction	135
6.1.1	Epidemiology	136
6.1.2	Etiology and Risk Factors	137
6.2	Epidemiologic Studies on Physical Activity and Hematologic Cancers	138
6.2.1	Non-Hodgkin's Lymphoma (NHL).	138
6.2.2	Leukemia.	138
6.2.3	Multiple Myeloma and Hodgkin's Lymphoma.	144
6.3	Main Hypothesized Biologic Mechanisms	144
6.3.1	Enhancement of Immune System	144
6.3.2	Maintenance of Energy Balance	148
6.3.3	Improvement of Antioxidant Defense Systems	149
6.3.4	Impact on Metabolic Hormones	149
6.3.5	Anti-inflammatory Effects.	150
6.4	Conclusion and Future Directions.	151
	References	151
7	Physical Activity and Gynecologic Cancer Prevention	159
	Anne E. Cust	
7.1	Endometrial Cancer.	160
7.1.1	Overall Findings	160
7.1.2	Domain of Physical Activity.	162
7.1.3	Intensity, Duration and Frequency of Exposure	162

7.1.4	Age Period	164
7.1.5	Population Subgroups	164
7.1.6	Conclusions	165
7.2	Ovarian Cancer	166
7.2.1	Overall Findings	166
7.2.2	Domain of Physical Activity	167
7.2.3	Intensity, Duration and Frequency of Exposure	167
7.2.4	Age Period	169
7.2.5	Population Subgroups	169
7.2.6	Conclusions	170
7.3	Cervical Cancer	171
7.3.1	Overall Findings and Conclusions	171
7.4	Biologic Mechanisms	172
7.4.1	Sex Hormone Levels	173
7.4.2	Adiposity	174
7.4.3	Insulin-Mediated Pathways	175
7.4.4	Inflammation	176
7.4.5	Immune Function	177
7.4.6	Metabolic and Cellular Pathways	177
7.4.7	Biologic Mechanisms – Conclusions	178
	References	178

Part II Physical Activity and Cancer Survivorship

8	Physical Activity and Breast Cancer Survivorship	189
	Kathryn Schmitz	
8.1	Introduction	189
8.2	Clinical Aspects – Effects of Treatment That Might be Altered by Physical Activity	190
8.2.1	Chemotherapy	190
8.2.2	Radiation	191
8.2.3	Surgery	191
8.2.4	Hormone Therapies	192
8.2.5	Targeted Therapies	192
8.2.6	Second Cancer Risk	193
8.3	Effects of Physical Activity on Supportive Care Outcomes	193
8.3.1	Safety of Exercise During and After Breast Cancer Therapies	193
8.3.2	Aerobic Fitness	200
8.3.3	Fatigue	202
8.3.4	Body Size	203
8.3.5	Lymphedema	204
8.3.6	Quality of Life	205
8.3.7	Summary and Conclusions Regarding Effects of Physical Activity on Supportive Care Outcomes	206
8.4	Disease Outcomes	206

8.5	Future Research Directions	207
8.5.1	Overall.	207
8.5.2	During Chemotherapy and Radiotherapy	208
8.5.3	After Chemotherapy and Radiotherapy.	208
8.6	Clinical Recommendations	208
8.7	Summary and Conclusion	209
	References	209
9	Physical Activity and Genitourinary Cancer Survivorship	217
	Daniel A. Galvão, Dennis R. Taaffe, Nigel Spry, and Robert U. Newton	
9.1	Introduction	217
9.2	Treatment of Prostate Cancer and Common Adverse Effects	218
9.3	Androgen Deprivation and Sarcopenia-Related Disorders	219
9.3.1	Body Composition.	219
9.3.2	Bone Mass and Skeletal Fracture	220
9.3.3	Insulin Resistance and Lipoprotein Profile	221
9.4	Other Side Effects from Androgen Deprivation	222
9.4.1	Quality of life	222
9.5	Treatment of Bladder and Kidney Cancers and Common Adverse Effects	222
9.6	Exercise Interventions During Prostate Cancer Treatment	223
9.7	Exercise Studies and Effects on Testosterone and PSA (Disease Outcomes).	229
9.8	Exercise Interventions Post-treatment of Prostate Cancer	229
9.9	Physical Activity and Bladder Cancer	230
9.10	Clinical Recommendations	230
9.11	Future Directions.	231
9.12	Summary	232
	References	232
10	Physical Activity and Gastrointestinal Cancer Survivorship	237
	Christopher M. Sellar and Kerry S. Courneya	
10.1	Introduction	237
10.2	Clinical Significance of Gastrointestinal Cancers	238
10.3	Treatment of Gastrointestinal Cancers	239
10.4	Physical Activity and Disease Outcomes in Gastrointestinal Cancer Survivorship	240
10.4.1	Potential Mechanisms of Physical Activity for Improved Disease Outcomes in Gastrointestinal Cancer Survivors	243
10.5	Physical Activity and Supportive Care Outcomes in Gastrointestinal Survivorship	244
10.5.1	Observational Studies	244
10.5.2	Intervention Studies.	250
10.6	Summary and Future Directions	250
	References	251

11 Physical Activity and Lung Cancer Survivorship	255
Lee W. Jones	
11.1 Clinical Significance of Lung Cancer	255
11.2 Lung Cancer Survivors Have Poor Cardiorespiratory Fitness	256
11.3 Central Importance of Cardiorespiratory Fitness Across the Lung Cancer Continuum	257
11.4 Exercise Therapy Following a Cancer Diagnosis	259
11.5 Exercise Therapy Following a Lung Cancer Diagnosis	259
11.5.1 Exercise Therapy for Operable Lung Cancer – Prior to Surgical Resection	259
11.5.2 Exercise Therapy for Operable Lung Cancer – Postsurgical Resection	263
11.6 Exercise Therapy for Inoperable Lung Cancer	267
11.7 Clinical Recommendations	267
11.8 Future Directions	268
11.9 Summary	271
References	271
12 Physical Activity and Hematological Cancer Survivorship	275
Claudio L. Battaglini	
12.1 Background and Significance of Hematological Cancers	275
12.2 Treatments for Hematological Cancers	276
12.2.1 Chemotherapy	276
12.2.2 Radiation Therapy	276
12.2.3 Immunotherapy	277
12.2.4 Stem Cell and Marrow Transplantation	277
12.3 Exercise Intervention Studies on Adult Patients with Hematological Cancers	278
12.3.1 Studies Conducted with Mixed Patients with Different Hematological Cancer Diagnosis	279
12.3.2 Studies Conducted in Patients with Multiple Myeloma	290
12.3.3 Studies Conducted in Patients with Acute Leukemia	291
12.3.4 Studies Conducted in Patients with Lymphoma	297
12.4 Summary	298
12.5 Clinical Recommendations	298
12.6 Future Research Directions	302
References	302
13 Physical Activity and Gynecologic Cancer Survivorship	305
Karen M. Gil and Vivian E.von Gruenigen	
13.1 Introduction	305
13.2 Ovarian Cancer	306
13.2.1 Recurrence and Survival	306

13.2.2	Clinical Recommendations	309
13.2.3	Future Research Directions	309
13.3	Endometrial Cancer	310
13.3.1	Quality of Life	311
13.3.2	Clinical Recommendations	313
13.3.3	Future Research Directions	313
13.4	Summary: Lifestyle and Ovarian and Endometrial Cancer	313
	References	313

Part III Physical Activity and Cancer Special Topics

14	Physical Activity and Pediatric Cancer Survivorship	319
	Alejandro F. San Juan, Kathleen Wolin, and Alejandro Lucía	
14.1	Medical Overview of Pediatric Cancer	319
14.1.1	B Cell Acute Lymphoblastic Leukemia (ALL)	320
14.1.2	Other Types of Hematological Malignancies in Children	320
14.1.3	Other Types of Pediatric Cancer	321
14.2	Side Effects of Treatment	322
14.2.1	Early Side Effects	322
14.2.2	Late Side Effects: Opposite Effects of Cancer/Treatment and Regular PA	322
14.2.3	HSCT Further Impairs Children's Physical Function	325
14.2.4	Cancer Fatigue	326
14.3	Physical Activity and Fitness Levels in Children with Cancer and in Survivors of Childhood Cancer	326
14.4	Exercise Interventions in Children with Cancer	333
14.4.1	Children not Receiving HSCT	333
14.4.2	Children Undergoing HSCT	340
14.4.3	Follow-Up Assessment	340
14.4.4	Safety and Side Effects	340
14.5	Practical Clinical Recommendations	341
14.6	Research Gaps and Future Research Directions	342
	References	342
15	Physical Activity and Palliative Cancer Care	349
	Sonya S. Lowe	
15.1	Introduction	349
15.2	Fatigue in the Palliative Cancer Patient	350
15.3	State of the Evidence	359
15.4	Summary and Future Perspectives	362
15.5	Clinical Recommendations	363
	References	363

16	Physical Activity Motivation and Cancer Survivorship	367
	Bernardine M. Pinto and Joseph T. Ciccolo	
16.1	Introduction	367
16.2	Cognitive Behavioral Theory	368
16.3	Social Cognitive Theory	371
16.4	Theory of Planned Behavior	373
16.5	Transtheoretical Model	375
16.6	Self-determination Theory	377
16.7	Other Theories and Approaches	378
16.7.1	Attribution Therapy	378
16.7.2	Motivational Interviewing	379
16.7.3	Roy Adaptation Model and the Levine Conservation Model	379
16.7.4	Interaction Model of Client Health Behavior	380
16.7.5	Five Factor Model of Personality	380
16.8	Other Determinants	380
16.9	Clinical Implications	382
16.10	Conclusions	382
