

Contents

Part I Introduction

- 1 The Role of Radiation Physics in Nuclear Medicine** 3
Marie Claire Cantone and Christoph Hoeschen
- 2 The Molecular Imaging Pathway to Biomedical Physics** 7
Fridtjof Nüsslin

Part II Fundamental Processes on Radiation Physics

- 3 Mechanisms of the Interactions Between Radiation and Matter** 15
Giuseppe Battistoni
- 4 Principles of Monte Carlo Calculations and Codes** 35
Alberto Fassò, Alfredo Ferrari, and Paola R. Sala

Part III Radiation Sources and Radiopharmaceutical Productions

- 5 Sealed Radionuclide and X-Ray Sources in Nuclear Medicine** 61
Sören Mattsson and Arne Skretting
- 6 Radiopharmaceutical Production** 71
Uwe Holzwarth
- 7 Research and Development of New Radiopharmaceuticals** 105
Gerhard Holl

Part IV Radiation Detectors for Medical Applications

- 8 Basic Principles of Detection of Ionizing Radiation Used in Medical Imaging** 141
Andrej Studen and Marko Mikuž

9	Scintillators and Semiconductor Detectors	161
	Ivan Veronese	
10	New Trends in Detectors for Medical Imaging	175
	Gabriela Llosá and Carlos Lacasta	
Part V New Frontiers in Nuclear Medicine		
11	The PET Magnifier Probe	195
	Carlos Lacasta, Neal H. Clinthorne, and Gabriela Llosá	
12	Algorithms for Image Reconstruction	211
	Christoph Hoeschen, Magdalena Rafecas, and Timo Aspelmeier	
13	Biokinetic Models for Radiopharmaceuticals	233
	Augusto Giussani and Helena Uusijärvi	
14	Voxel Phantoms for Internal Dosimetry	257
	Maria Zankl, Helmut Schlattl, Nina Petoussi-Henss, and Christoph Hoeschen	
	Index	281
