

Contents

Acronyms	xi
1 Introduction and Fundamentals	1
1.1 The Starting Point: Sustainability and Global Change	1
1.2 Systems and Balances	5
1.2.1 Types of Systems and General Balances	5
1.2.2 Example: Historical Development of Atmospheric CO ₂ Concentration	7
1.2.3 Characteristics of Dynamic Systems	9
1.3 Thermodynamics: the Different Forms of Energy	17
1.3.1 The First Law of Thermodynamics	17
1.3.2 The Second Law of Thermodynamics	19
1.3.3 Non-equilibrium Thermodynamics: Complex Behavior and Formation of Structures	22
References	24
2 Biogeosphere as Environment for Life	27
2.1 Planet Earth and the Present Biogeosphere	27
2.2 Historical Development of the Biogeosphere	32
2.2.1 Formation of Earth and Driving Forces for Change	32
2.2.2 Atmosphere	34
2.2.3 Climate	38
2.2.4 Life	42
2.2.5 Civilization	46
References	50
3 Energy Balance of the Earth	53
3.1 Energy Exchange by Radiation	54
3.2 Role of the Atmosphere and Greenhouse Effect	56
3.3 Spatio-temporal Variations	60
3.4 Photosynthesis	64

3.5	Energy Balance and Climate	70
3.5.1	Snowball Earth: Ice-Albedo Feedback and Multiple Climate States	70
3.5.2	Simple Models for the Self-Regulating Behavior of the Earth System	72
3.5.3	Global Climate Models	74
	References	77
4	Global Material Cycles	79
4.1	The Carbon Cycle	80
4.2	The Oxygen Cycle	84
4.3	The Water Cycle	86
4.4	The Nitrogen Cycle	90
4.5	The Sulfur Cycle	93
4.6	The Phosphorus Cycle	95
4.7	The Chlorine Cycle	96
4.8	Interaction of Material Cycles	101
	References	103
5	Anthropogenic Material and Energy Flows	105
5.1	Changes in the Natural Carbon Cycle	105
5.1.1	Overview of Factors and Phases	105
5.1.2	Phase 10 000–250 Years Ago	107
5.1.3	Phase 250 Years Ago Until Today	110
5.2	Other Anthropogenic Material Flows	113
5.3	Global Utilization of Primary Energy	115
5.4	Energy Flows in Germany	116
5.4.1	Overview	117
5.4.2	Energy Flows Related to Mobility and Transport	120
5.4.3	Energy Flows Related to Industry	123
5.4.4	Energy Flows Related to Buildings and Domestic Use	126
5.5	Correlation Between Energy Flows and Carbon Flows	127
	References	131
6	Limits for Anthropogenic Material and Energy Flows	133
6.1	Reserves and Resources of Fossil Fuels	133
6.2	Net Primary Production of Photosynthesis <i>NPP</i>	138
6.3	Local and Regional Ecosystems	140
6.4	Impact on Climate System	142
	References	143
7	Approaches to Global Development	145
7.1	Criteria and Aims of Future Development	145
7.2	Examples of Sustainable Technologies	148
7.2.1	Electrical Energy Generation	148

7.2.2	Heat Generation	152
7.2.3	Energy Supply for Mobility and Transport	156
7.2.4	Bioenergy	158
7.2.5	Hydrogen	163
7.3	Climate Engineering	164
7.4	Individual Living Conditions and Lifestyles	166
7.5	Global CO ₂ Emission and Atmospheric Carbon Inventory Scenarios	170
	References	175
8	Conclusions	177
	Glossary	181
	Nomenclature	191
	Index	195

Energy Flows, Material Cycles and Global Development

A Process Engineering Approach to the Earth System

Schaub, G.; Turek, Th.

2011, XII, 204 p., Hardcover

ISBN: 978-3-642-12735-9
