

Contents

1	Oxygen, Its Nature and Chemistry: What Is so Special About This Element?	1
1.1	A Brief Introduction to Oxygen	1
1.2	Atomic Structure of Oxygen: Chemical Bonding Potential	2
1.3	The Dioxygen Molecule	5
1.4	Reactive Oxygen Species	8
1.4.1	Superoxide $\text{}^1\text{O}_2^{-*}$	8
1.4.2	Hydrogen peroxide (H_2O_2)	9
1.4.3	Peroxyl radical (ROO^*)	9
1.5	Ozone	10
1.6	Water	12
1.7	Water Vapor in the Atmosphere	15
1.8	Carbon Dioxide	15
1.9	Solubility of Gases in Water	16
1.10	Hydrolysis and Dehydration: Central Water Reactions in Biology	16
1.11	Redox Reactions	17
	References	18
2	A Brief History of Oxygen	21
2.1	Cosmic History of the Elements	21
2.1.1	The Sun and Solar System	24
2.2	Formation of Earth	25
2.3	The Primordial Environment	27
2.3.1	Atmosphere of the Early Earth	27
2.3.2	Water on the Earth's Surface: The Origin of Oceans	29
2.3.3	The First Greenhouse Effect	29
2.4	Life: Its Origins and Earliest Development	30
2.5	A Billion Years of Life Without Dioxygen: Anaerobic Metabolism	32
2.5.1	Some Principles of Metabolism	32
2.6	The Invention of Photosynthesis	35

2.7 How Oxygenic Photosynthesis Remodeled the Earth	38
2.7.1 The First Rise of Dioxygen	38
2.7.2 Effects on Life: An Ecological Catastrophe?	39
2.7.3 Effects on the Earth	40
References	41
3 Coping with Oxygen	43
3.1 The Impact of Oxygenation on an Anaerobic World	43
3.2 Production of Reactive Oxygen Species	44
3.3 Coping with Reactive Oxygen Species	47
3.3.1 Scavenger Molecules	47
3.3.2 Enzymes for Detoxification of ROS	49
3.3.3 Antioxidant Enzyme Systems	51
3.4 How to Avoid Reactive Oxygen Species?	52
3.5 Evolving Defense Strategies	53
3.5.1 Aggregation for Defense	53
3.5.2 Melanin	54
3.5.3 Oxygen Transport Proteins Prevent Creation of Oxygen Radicals	55
3.6 Reactive Oxygen Species as Cellular Signals	56
3.7 Dioxygen as a Signal: Oxygen Sensor	56
3.8 Summary: Reactive Oxygen Species and Life	57
References	58
4 Aerobic Metabolism: Benefits from an Oxygenated World	61
4.1 The Advantage to Being Aerobic	61
4.2 Evolution of an Aerobic Metabolism	62
4.2.1 Special Mechanisms Needed for Aerobic Metabolism	62
4.2.2 When and How Did Aerobes Arise?	63
4.3 Eukaryotes: The Next Step in Evolution	67
4.3.1 Distinction Between Prokaryotes and Eukaryotes	67
4.3.2 The Symbiotic Hypothesis	67
4.4 The Last Great Leap: Multicellular Organisms, “Metazoans”	69
4.4.1 When, Why, and How?	69
4.4.2 Collagen and Cholesterol	70
4.4.3 Half a Billion Years of Stasis?	71
4.4.4 Emergence and Extinction of the Ediacaran Fauna	72
4.4.5 The Bilateral Body Plan	73
4.4.6 The “Cambrian Explosion”: Fact or Artifact?	74
References	76
5 Facilitated Oxygen Transport	79
5.1 How to Deliver Dioxygen to Animal Tissues?	79
5.2 Modes of Delivery	80

5.2.1	Diffusion from the Surface	80
5.2.2	Transport via Blood as a Dissolved Gas	81
5.2.3	Oxygen Transport Proteins: What They Must Do?	82
5.3	Modes of Dioxygen Binding to Oxygen Transport Proteins	84
5.3.1	Cooperative and Noncooperative Binding	84
5.3.2	How Does Cooperativity Work?: Models for Allostery	86
5.3.3	Self-Assembly and Nesting	88
5.3.4	Why Complex Multisubunit Oxygen Transport Proteins?	89
5.4	Modulation of Dioxygen Delivery by Oxygen Transport Proteins: Heteroallostery	89
5.4.1	Modulation by the Products of Anaerobic Metabolism: the Bohr Effect	90
5.4.2	The Haldane Effect	90
5.4.3	The Root Effect	91
5.4.4	Temperature Dependence	92
5.4.5	Evolutionary Aspects of Regulation	93
5.5	Diversity of Oxygen Transport Proteins	93
5.5.1	Hemoglobins	94
5.5.2	Hemerythrins	96
5.5.3	Hemocyanins	96
5.6	Evolution of Oxygen Transport Proteins	99
5.7	Was Snowball Earth a Possible Trigger for OPT Evolution?	101
5.8	From What Proteins Did Oxygen Transport Proteins Evolve?	102
5.9	Oxygen Transport Proteins and “Intelligent Design”	103
	References	103
6	Climate Over the Ages; Is the Environment Stable?	107
6.1	Climate and Glaciations in Earth’s History	108
6.1.1	The First Massive Glaciations; the Huronian Event: A Role for Methane?	108
6.1.2	Later Proterozoic Glaciations	110
6.1.3	Phanerozoic Climate and Glaciations	111
6.2	How Did Life Survive Glaciations?	116
6.3	Milestones of Life in the Phanerozoic	118
6.4	Inorganic Cycling of Carbon Dioxide	121
6.5	Is Our Environment Stable?	122
6.6	Recent Global Warming	124
	References	124
7	Global Warming: Human Intervention in World Climate	127
7.1	Recent Climate Changes	127
7.2	Physical Consequences of Global Warming	129
7.2.1	Shrinking Ice and Glaciers	129
7.2.2	Sea Level Changes	130
7.2.3	Changes in Ocean Currents	131

7.2.4 Local Climate and Weather	132
7.2.5 The Danger of Methane Releases	133
7.2.6 Greenhouse to Icehouse and Vice Versa?	133
7.3 Human Consequences of Global Warming	134
7.3.1 Direct Consequences of CO ₂ and Temperature Increase	134
7.3.2 Sea Level Rise	135
7.3.3 Extreme Weather	136
7.3.4 Effects on Agriculture	137
7.4 Control of Global Warming	138
7.4.1 Positive and Negative Natural Feedback Mechanism	138
7.4.2 Human Effects to Control Global Warming	139
7.4.3 The Long View	139
References	140
8 Oxygen in Medicine	143
8.1 Hypoxia	143
8.1.1 High-Altitude Hypoxia	144
8.1.2 Hypoxia Arising from Medical Conditions	145
8.2 Oxidative Stress	145
8.2.1 Nature of Oxidative Stress	145
8.2.2 Special Examples of Medical Consequences of Oxidative Stress	146
8.3 Treatment of Oxidative Stress	149
8.4 Beneficial Roles of ROS	150
8.4.1 SCN and Primary Immune Response	150
8.4.2 Nitric Oxide	151
References	153
9 Oxygen and the Exploration of the Universe	157
9.1 What Is Essential for the Development of Life as We Know It?	157
9.2 What Makes O ₂ Necessary for Complex Life on Habitable Planets?	158
9.3 Seeking Evidence for Extraterrestrial Life	158
9.4 Life in the Solar System?	161
9.4.1 Terrestrial Planets	161
9.4.2 Icy Moons	163
9.5 Oxygen Supply Problems in Extraterrestrial Voyages	164
9.6 Problems Facing Extended Extraterrestrial Settlement or Colonization	166
9.6.1 Adjusting the Planetary Environment: Terraforming	166
9.6.2 Adjusting the Organism: Bioforming	167

Index	169

Oxygen and the Evolution of Life

Decker, H.; van Holde, K.E.

2011, XI, 172 p., Hardcover

ISBN: 978-3-642-13178-3
