

Contents

1	Introduction	1
1.1	The Central Limit Theorem	1
1.2	A Brief History of Stein's Method	3
1.3	The Basic Idea of Stein's Method	4
1.4	Outline and Summary	8
2	Fundamentals of Stein's Method	13
2.1	Stein's Equation	13
2.2	Properties of the Solutions	15
2.3	Construction of Stein Identities	18
2.3.1	Sums of Independent Random Variables	19
2.3.2	Exchangeable Pairs	21
2.3.3	Zero Bias	26
2.3.4	Size Bias	31
2.4	A General Framework for Stein Identities and Normal Approximation for Lipschitz Functions	36
	Appendix	37
3	Berry–Esseen Bounds for Independent Random Variables	45
3.1	Normal Approximation with Lipschitz Functions	46
3.2	The Lindeberg Central Limit Theorem	48
3.3	Berry–Esseen Inequality: The Bounded Case	49
3.4	The Berry–Esseen Inequality for Unbounded Variables	53
3.4.1	The Concentration Inequality Approach	53
3.4.2	An Inductive Approach	57
3.5	A Lower Berry–Esseen Bound	59
4	L^1 Bounds	63
4.1	Sums of Independent Variables	65
4.1.1	L^1 Berry–Esseen Bounds	65
4.1.2	Contraction Principle	69

4.2	Hierarchical Structures	72
4.2.1	Bounds to the Normal for Approximately Linear Recursions	78
4.2.2	Normal Bounds for Hierarchical Sequences	82
4.2.3	Convergence Rates for the Diamond Lattice	87
4.3	Cone Measure Projections	88
4.3.1	Coupling Constructions for Coordinate Symmetric Variables and Their Projections	90
4.3.2	Construction and Bounds for Cone Measure	94
4.4	Combinatorial Central Limit Theorems	100
4.4.1	Use of the Exchangeable Pair	102
4.4.2	Construction and Bounds for the Combinatorial Central Limit Theorem	105
4.5	Simple Random Sampling	111
4.6	Chatterjee's L^1 Theorem	116
4.7	Locally Dependent Random Variables	133
4.8	Smooth Function Bounds	136
4.8.1	Fast Rates for Smooth Functions	136
	Appendix	138
5	L^∞ by Bounded Couplings	147
5.1	Bounded Zero Bias Couplings	147
5.2	Exchangeable Pairs, Kolmogorov Distance	149
5.3	Size Biasing, Kolmogorov Bounds	156
5.4	Size Biasing and Smoothing Inequalities	161
6	L^∞: Applications	167
6.1	Combinatorial Central Limit Theorem	167
6.1.1	Uniform Distribution on the Symmetric Group	168
6.1.2	Distribution Constant on Conjugacy Classes	183
6.1.3	Doubly Indexed Permutation Statistics	201
6.2	Patterns in Graphs and Permutations	202
6.3	The Lightbulb Process	210
6.4	Anti-voter Model	213
6.5	Binary Expansion of a Random Integer	217
7	Discretized Normal Approximation	221
7.1	Poisson Binomial	222
7.2	Sum of Independent Integer Valued Random Variables	227
8	Non-uniform Bounds for Independent Random Variables	233
8.1	A Non-uniform Concentration Inequality	233
8.2	Non-uniform Berry–Esseen Bounds	237
9	Uniform and Non-uniform Bounds Under Local Dependence	245
9.1	Uniform and Non-uniform Berry–Esseen Bounds	246
9.2	Outline of Proofs	247
9.3	Applications	253

10	Uniform and Non-uniform Bounds for Non-linear Statistics	257
10.1	Introduction and Main Results	257
10.2	Applications	260
10.2.1	U -statistics	260
10.2.2	Multi-sample U -statistics	262
10.2.3	L -statistics	265
10.2.4	Random Sums of Independent Random Variables with Non-random Centering	270
10.2.5	Functions of Non-linear Statistics	273
10.3	Uniform and Non-uniform Randomized Concentration Inequalities	277
	Appendix	284
11	Moderate Deviations	293
11.1	A Cramér Type Moderate Deviation Theorem	293
11.2	Applications	295
11.3	Preliminary Lemmas	298
11.4	Proofs of Main Results	302
	Appendix	310
12	Multivariate Normal Approximation	313
12.1	Multivariate Normal Approximation via Size Bias Couplings	314
12.2	Degrees of Random Graphs	315
12.3	Multivariate Exchangeable Pairs	325
12.4	Local Dependence, and Bounds in Kolmogorov Distance	331
13	Non-normal Approximation	343
13.1	Stein's Method via the Density Approach	343
13.1.1	The Stein Characterization and Equation	344
13.1.2	Properties of the Stein Solution	346
13.2	L^1 and L^∞ Bounds via Exchangeable Pairs	347
13.3	The Curie–Weiss Model	353
13.4	Exponential Approximation	358
13.4.1	Spectrum of the Bernoulli–Laplace Markov Chain	358
13.4.2	First Passage Times	363
	Appendix	367
14	Group Characters and Malliavin Calculus	371
14.1	Normal Approximation for Group Characters	371
14.1.1	$O(2n, \mathbb{R})$	379
14.1.2	$SO(2n + 1, \mathbb{R})$	380
14.1.3	$USp(2n, \mathbb{C})$	381
14.2	Stein's Method and Malliavin Calculus	381
	Appendix	389
	Notation	389
	References	391

Normal Approximation by Stein's Method

Chen, L.H.Y.; Goldstein, L.; Shao, Q.-M.

2011, XII, 408 p. 3 illus., Hardcover

ISBN: 978-3-642-15006-7
