

# Contents

<b>1</b>	<b>Introduction .....</b>	<b>1</b>
<b>Part I Fundamentals</b>		
<b>2</b>	<b>Credit Derivatives and Markets.....</b>	<b>7</b>
2.1	Credit Risk .....	7
2.2	Traditional Credit Instruments .....	7
2.2.1	Loans .....	8
2.2.2	Bonds.....	9
2.3	General Aspects on Credit Derivatives .....	11
2.3.1	Definition and Classification of Credit Derivatives .....	11
2.3.2	Reasons for Participation in Credit Derivative Market .....	13
2.3.3	Risks in Credit Derivatives Market .....	15
2.4	Single Name Credit Derivatives .....	17
2.4.1	Credit Default Swap .....	17
2.4.2	Credit Default Option .....	18
2.4.3	Total Return Swap .....	19
2.4.4	Credit Spread Option .....	20
2.5	Multi-Name Credit Derivatives .....	21
2.5.1	<i>K</i> th-to-Default Swap .....	21
2.5.2	Portfolio Credit Default Swap .....	22
2.6	Credit Linked Notes .....	23
2.7	Securitization-Based Multi Name Credit Derivatives .....	25
2.7.1	Definition and Functionality .....	25
2.7.2	Reasons for the Utilization of Securitization .....	28
2.7.3	Risks Related to Securitization Market .....	29
2.7.4	Classification of CDOs .....	30
2.7.5	True Sale CDO.....	31
2.7.6	Synthetic CDO.....	32

2.8	CDS Indices .....	34
2.8.1	iTraxx Indices .....	34
2.8.2	CDX Indices .....	41
2.9	Credit Derivatives Markets .....	43
2.9.1	Evolution of the Market .....	44
2.9.2	Market Participants .....	44
2.9.3	Market Breakdown .....	47
2.10	Securitization Markets .....	50
2.10.1	Evolution and Size .....	51
2.10.2	Market Breakdown .....	52
2.11	Sub-Prime Crisis .....	55
2.11.1	Causes of the Crisis .....	56
2.11.2	Impact of the Crisis .....	62
2.11.3	Efforts on Crisis Fighting .....	65
<b>3</b>	<b>Mathematical Preliminaries .....</b>	<b>67</b>
3.1	Stochastic Calculus .....	67
3.1.1	Probability Spaces and Stochastic Processes .....	67
3.1.2	Stochastic Differential Equations .....	69
3.1.3	Equivalent Measure .....	71
3.2	Modeling Single-Name Defaults with the Intensity Models .....	73
3.2.1	Default Intensity Model .....	73
3.2.2	Valuation of Single Name Credit Default Swaps .....	76
3.2.3	Estimation of the Default Intensity of Credit Default Swaps .....	78
3.3	Hidden Markov Model .....	78
3.4	Rating Migration Probabilities .....	86
3.5	Portfolio Optimization .....	88
3.5.1	Mean-Variance Approach .....	88
3.5.2	Conditional Value at Risk Approach .....	90
 <b>Part II Static Models</b>		
<b>4</b>	<b>One Factor Gaussian Copula Model .....</b>	<b>95</b>
4.1	General Valuation Framework for Synthetic CDOs .....	95
4.2	Vasicek Model of Credit Portfolio: Large Homogeneous Portfolio Approximation .....	98
4.2.1	One Factor Gaussian Copula Model of Correlated Defaults .....	98
4.2.2	Loss Distribution of the Large Homogeneous Portfolio Under One Factor Gaussian Model .....	100
4.2.3	Loss Distribution of the Large Homogeneous Portfolio Under a General One Factor Model .....	103
4.2.4	Analytic Expression for Expected Tranche Loss Under Vasicek Model .....	106

4.2.5	Expected Tranche Loss of a Portfolio with Non-Zero Recovery .....	106
4.2.6	Correlation Smile .....	107
4.2.7	Base Correlation Approach for Valuation of Off-Market Tranches .....	111
4.3	Overview of the Extensions of the Vasicek Model .....	117
4.3.1	Heterogeneous Finite Portfolio .....	117
4.3.2	Different Distributions .....	121
4.3.3	More Stochastic Factors .....	123
4.3.4	Comparison of the Calibration Results of the Extension Models in the Literature .....	127
<b>5</b>	<b>Normal Inverse Gaussian Factor Copula Model .....</b>	<b>129</b>
5.1	The Main Properties of the Normal Inverse Gaussian Distribution ..	129
5.2	Efficient Implementation of the NIG Distribution .....	136
5.3	One Factor NIG Copula Model .....	141
5.4	CDO Valuation Using the One Factor NIG Model .....	144
5.5	Calibration and Descriptive Statistics of the One Factor NIG Model .....	147
 <b>Part III Term-Structure Models</b>		
<b>6</b>	<b>Term Structure Dimension .....</b>	<b>167</b>
6.1	Extension of the Base Correlation .....	167
6.2	Term Structure One Factor NIG Copula Model .....	170
6.3	Non-Standardized Term-Structure NIG Model Formulation .....	175
<b>7</b>	<b>Large Homogeneous Cell Approximation for Factor Copula Models ..</b>	<b>177</b>
7.1	LHC Gaussian Model .....	178
7.2	LHC NIG Model .....	181
7.3	Calibration of the LHC Models .....	182
<b>8</b>	<b>Regime-Switching Extension of the NIG Factor Copula Model .....</b>	<b>185</b>
8.1	Note on Some Properties of the Term-Structure NIG Factor Copula Model .....	185
8.2	Crash-NIG Copula Model .....	186
8.3	Valuation of CDO Tranches with the Crash-NIG Copula Model ...	201
8.4	Calibration of the Crash-NIG Copula Model .....	202
8.4.1	Data Description .....	202
8.4.2	Calibration of the Model with Two States .....	206
8.4.3	Calibration of the Model with Three States .....	216

<b>9</b>	<b>Simulation Framework</b> .....	227
9.1	Rating Migration and Default Model .....	228
9.2	Interest Rate Model .....	232
9.3	Credit Spread Model .....	233
9.4	Case Study .....	235
9.4.1	Model Calibration .....	235
9.4.2	Simulation of the Economic Factors and Pricing of the Credit Instruments .....	238
9.4.3	Asset Allocation Results .....	242
<b>10</b>	<b>Conclusion</b> .....	253
<b>A</b>	<b>Some Results in Chapter 4</b> .....	257
A.1	Proof of Proposition 4.1 .....	257
A.2	Proof of Proposition 4.2 .....	258
A.3	Lemma on Change of Limit and Integration Order .....	258
A.4	Proof of Lemma on Expected Tranche Loss .....	259
<b>B</b>	<b>Normal Inverse Gaussian Process</b> .....	263
	<b>References</b> .....	265

Pricing and Risk Management of Synthetic CDOs

Schlösser, A.

2011, XII, 268 p. 90 illus., Softcover
