

Contents

1	History	1
1.1	Prelude	1
1.1.1	The Ancient Mechanical Universe	1
1.1.2	The Dark Ages	3
1.1.3	The Renaissance of Science	4
1.1.4	Discovery of Dark Nebulae	5
1.1.5	Dawn of Spectroscopy	6
1.2	Interstellar Medium (ISM)	7
1.2.1	Atomic and Molecular Hydrogen	8
1.2.2	The 21-cm Line of Neutral Hydrogen	9
1.2.3	Recombination Lines	10
1.2.4	Atomic Fine- and Hyperfine-Structure Lines	10
1.3	Interstellar Molecular Lines	12
1.3.1	Small Molecules	13
1.3.2	Large Molecules	14
1.3.3	Non-polar Molecules	14
1.3.4	Atomic Carbon and CO Molecule	15
1.3.5	Molecular Cloud and Star Formation	16
1.4	Molecular Spectroscopy: An Irreplaceable Tool	17
1.4.1	Scope of Interstellar Atomic and Molecular Spectroscopy	18
1.4.2	Terahertz Region: Far-InfraRed Domain	19
1.5	Episodal Appendix	21
1.5.1	Life Story of Fraunhofer	21
1.5.2	Life Story of Herschel	22
	References	25
2	Molecules Detected in Interstellar Space	27
2.1	Detection of the First Interstellar Molecules	27
2.2	The habitat of Interstellar Molecules	30

2.3	Metal-bearing Molecules in the Interstellar Medium.	30
2.4	Light Hydrides	32
2.5	Ions	34
2.5.1	Cation	34
2.5.2	Anions	34
2.6	Chain Molecules	35
2.7	Symmetric and Asymmetric Top Molecules	35
2.8	Cyclic Molecules	36
2.9	Complex Molecules	37
2.10	Isotopologues and Deuterated Molecules.	37
2.11	Prospects for Future Detections	39
	References	39
3	Fundamentals of Spectroscopy for Astrophysics	43
3.1	Atoms.	43
3.1.1	Hamiltonian for the Hydrogen Atom	43
3.1.2	Schrödinger Equation	44
3.1.3	Angular Wavefunction	45
3.1.4	Radial Wavefunction	46
3.1.5	Atomic Orbit.	47
3.1.6	Electron Spin and Fine Structure	48
3.1.7	Nuclear Spin and Hyperfine Structure	49
3.1.8	Atoms with More Than One Electron.	49
3.2	Diatomic Molecules	57
3.2.1	Hamiltonian for a Diatomic Molecule without Spin	57
3.2.2	Hamiltonian for a Diatomic Molecule without Electronic Angular Momentum	60
3.2.3	Hamiltonian for a Diatomic Molecule with Electronic Angular Momentum	65
3.2.4	Hyperfine Structure	70
3.3	Polyatomic Molecules.	71
3.3.1	The Born–Oppenheimer Approximation	71
3.3.2	The Choice of Rotation–Vibration Coordinates	73
3.3.3	The Eckart Equations	78
3.3.4	Normal Coordinates	81
3.3.5	Molecular Rotation–Vibration Energies	84
3.3.6	The Rigidly Rotating Molecule	87
3.3.7	The Harmonically Vibrating Molecule	93
3.3.8	Effective Hamiltonians	97
3.3.9	Molecular Symmetry	101
3.3.10	TAppendix to 3.3.	108
3.4	Molecules with Internal Rotation	119
3.4.1	Molecule with One Methyl Internal Rotor.	120
3.4.2	Two-Top Internal-Rotation Problem.	150

3.4.3	Case of a Molecule with Two Equivalent Methyl Internal Rotors.	160
3.4.4	Tunneling Matrix Formulation for Molecules with Two Methyl Internal Rotors	166
3.4.5	Appendix to 3.4.	172

Interstellar Molecules

Their Laboratory and Interstellar Habitat

Yamada, K.M.T.; Winnewisser, G. (Eds.)

2011, X, 230 p., Hardcover

ISBN: 978-3-642-16267-1
