

Contents

1	Introduction	1
1.1	Photovoltaic System, a Short Preview	2
1.2	The Energy Crisis and the Electricity Demand	3
1.3	Questions	5
2	Energy Management	7
2.1	Basic Principles of Energy Management	7
2.2	Principles, Terms and Operation of Energy Management in Industry	8
2.3	Energy Saving Management Strategy	8
2.3.1	Identify a Strategic Corporate Approach	10
2.3.2	Commitment of the Personnel and Appoint Energy Manager	10
2.3.3	Set up an Energy Monitoring and Reporting System	11
2.3.4	Conduct Energy Audit	12
2.3.5	Formalize an Energy Management Policy Statement	13
2.3.6	Prepare and Undertake a Detailed Project Implementation Plan	14
2.3.7	Implement a Staff Awareness and Training Program	14
2.3.8	Financing of the Investment Cost	14
2.3.9	Annual Review	15
2.3.10	Communicative Policy	15
2.4	Questions	17
3	Environmental Management	19
3.1	Develop an Environmental Strategy	19
3.2	Environmental and Energy Management	19
3.3	Environmental Management Systems	21
3.4	Mechanical Equipment Selection	21
3.5	Eco-Label Award	22

3.6	Energy Management Policy for Industrial Application	23
3.7	Planning the Policy for the Industry.	24
3.7.1	Action Planning	24
3.7.2	Management Team Commitment	25
3.7.3	Clear Responsibility and Accountability	25
3.7.4	Specific, Realistic Goals	25
3.7.5	Energy Program	26
3.7.6	The Right Place for the Energy Manager.	26
3.7.7	Choosing an External Partner	27
3.7.8	Objectives	28
3.8	Questions	29
4	Photovoltaic Energy	31
4.1	Photovoltaic Technology and Systems Information	32
4.2	The PV Cell	34
4.3	The PV Panel	35
4.3.1	Electrical Characteristic	36
4.4	Power Fitting-Out: The PV Inverter.	41
4.5	Maximum Power Point Tracker (MPPT)	42
4.6	Applications of Photovoltaic Cells.	45
4.6.1	PV for Households	45
4.6.2	Application of PV in Urban and Rural Areas	47
4.6.3	Application of PV in Rural Areas	48
4.7	The Current Energy Payback Time of a PV Panel.	49
4.7.1	The Energy Payback Time of a PV Panel in 2010	50
4.8	Solar Energy Costs/Prices.	52
4.9	Questions	55
5	Installed PV System at industrial buildings	57
5.1	European Policy for RES	57
5.2	Installing PV System	60
5.3	Basic Steps for Installation	64
5.3.1	Sizing the Organization Photovoltaic System	64
5.3.2	Choosing the Solar PV Installer	65
5.4	Reaping the Benefits	65
5.5	Estimating Electrical Energy Savings.	66
5.5.1	Costs and Competitiveness.	66
5.5.2	Competitiveness of Off-Grid Applications	66
5.5.3	Competitiveness of Grid-Connected Applications	67
5.6	External Costs of Conventional Electricity Generation	69
5.7	Factors Affecting PV Cost Reductions	70
5.7.1	Feed-in Tariff.	71
5.7.2	Feed-in Tariff: The Driver of Cost Reduction.	72

5.7.3	Feed-in Tariff: The Driver of High-Quality Solar Electricity Systems	72
5.7.4	Feed-in Tariff: The Driver of Easier Financing.	72
5.8	Questions	73
6	Installation Guide	75
6.1	Structure of the Connected Building Photovoltaic Systems.	75
6.1.1	Classification of the Building Interconnected PV Systems	76
6.2	Building Connected PV Systems Under an Independent Producer.	77
6.2.1	Configuration of the Connection Depending on the Maximum Power of the PV System	77
6.2.2	Choosing the Right Location for Installing a PV System.	77
6.2.3	Shading Problems	78
6.3	Static Study Materials & Support Material	79
6.4	Selecting the Placement Area of the Electronic Converters.	80
6.5	Designing the PV System.	81
6.5.1	Basic Principles to Follow When Designing a Quality PV System for Industrial Use.	81
6.5.2	Grid-Interactive Only (No Battery Backup)	82
6.6	Connection of the Network.	96
6.6.1	Connecting the Building PV Systems to a Low Voltage Electrical Network.	96
6.6.2	Configuration of the Connection of Building PV Systems: Electrical Network	96
6.6.3	General Safety Instructions	101
6.6.4	Measures for the Risk Reduction of an Electric Shock During the Installation of a PV System	101
6.7	PV Electric System Installation Checklist.	104
6.7.1	Before Starting Any PV System Testing: (Hard Hat and Eye Protection Recommended)	104
6.7.2	PV Array: General (Hard Hat, Gloves, and Eye Protection Recommended)	104
6.7.3	PV Array Circuit Wiring (Hard Hat and Eye Protection Recommended)	105
6.7.4	Repetitive Source Circuit String Wiring (Hard Hat, Gloves, and Eye Protection Recommended)	105
6.7.5	Continuation of PV Array Circuit Wiring (Hard Hat, Gloves, and Eye Protection Recommended)	105
6.7.6	Inverter Startup Tests (Hard Hat, Gloves, and Eye Protection Recommended)	106

6.7.7	System Acceptance Tests (Hard Hat and Eye Protection Recommended)	107
6.8	Questions	108
7	Installation of a 20 kW Grid-Connected PV System	111
7.1	Greek Policy	111
7.1.1	Conditions of Space of Installation	112
7.1.2	Cost of the PV Station.	112
7.1.3	Maintenance of a Photovoltaic Station: Cost	112
7.1.4	Industry's Targets	112
7.2	The Solar Radiation	113
7.3	System Description	115
7.3.1	Electrical Diagram of the Grid-Connected PV System. . .	118
7.3.2	Solar Array	118
7.4	Grid-Connected Inverter	120
7.4.1	Inverter Sizing	120
7.5	Inverters Efficiency	121
7.5.1	First Approach	122
7.5.2	Measurements.	122
7.6	Conclusions	124
7.7	Questions	125
	Appendices	127
	Glossary	139
	Bibliography	159

Photovoltaic Industrial Systems

An Environmental Approach

Papadopoulou, E.

2011, XII, 161 p., Hardcover

ISBN: 978-3-642-16300-5
