## Part I Physics of High Speed Lasers

<b>1</b>	<b>Basic Description of Laser Diode Dynamics by Spatially Averaged Rate Equations: Conditions of Validity</b>	<b>3</b>
1.1	The “Local” Rate Equations	3
1.2	Spatially Averaged Rate Equations and their Range of Validity	5
<b>2</b>	<b>Basic “Small-Signal” Modulation Response</b>	<b>11</b>
<b>3</b>	<b>Distortions in Direct Modulation of Laser Diodes</b>	<b>19</b>
3.1	Perturbation Analytic Prediction of Fundamental Distortions in Directly Modulated Laser Diodes	19
3.2	Intermodulation Distortion	22
<b>4</b>	<b>Direct Modulation Beyond X-Band by Operation at High Optical Power Density</b>	<b>29</b>
<b>5</b>	<b>Improvement in Direct-Modulation Speed by Enhanced Differential Optical Gain and Quantum Confinement</b>	<b>35</b>
5.1	Demonstration of the Explicit Dependence of Direct-Modulation Bandwidth on Differential Gain by Low-Temperature Operation	35
5.1.1	Direct-Modulation Results	35
5.1.2	Parasitic-Free Photo Mixing Modulation Experiment	38
5.2	Attainment of High-Modulation Bandwidths Through Quantum-Confined Materials	40
<b>6</b>	<b>Dynamic Longitudinal Mode Spectral Behavior of Laser Diodes Under Direct High-Frequency Modulation</b>	<b>45</b>
6.1	Introduction	45
6.2	Experimental Observations	46
6.3	Time Evolution Equations for Fractional Modal Intensities	50
6.4	A Two-Mode Laser	51

6.5	Solution to the Many-Mode Problem .....	55
6.5.1	An Approximate Analytic Solution of $\alpha_0 \sum_i \frac{1}{1+ci^2} = 1$ .....	58
6.6	Lasing Spectrum Under CW High-Frequency Microwave Modulation .....	59
6.7	Dynamic Wavelength “Chirping” Under Direct Modulation .....	61
6.8	Summary and Conclusions .....	62
7	<b>Signal-Induced Noise in Fiber Links</b> .....	65
7.1	Introduction .....	65
7.2	Measurements .....	67
7.3	Analysis and Comparison With Measurements .....	72
7.3.1	Mode-Partition Noise and Noise Transposition in Fiber Links Using Multimode Lasers .....	73
7.3.2	Transposed Interferometric Noise in Fiber Links Using Single-Frequency Lasers .....	78
7.4	Mode-Partition Noise in an Almost Single-Mode Laser .....	82
7.5	Conclusion .....	83
 <b>Part II Direct Modulation of Semiconductor Lasers Beyond Relaxation Oscillation</b>		
8	<b>Illustration of Resonant Modulation</b> .....	87
9	<b>Resonant Modulation of Monolithic Laser Diodes at Millimeter-Wave Frequencies</b> .....	93
9.1	Active Mode-Locking .....	95
9.2	Passive Mode-Locking .....	97
10	<b>Performance of Resonant Modulation in the Millimeter-Wave Frequency Range: Multi-Subcarrier Modulation</b> .....	101
11	<b>Resonant Modulation of Single-Contact Lasers</b> .....	107
 <b>Part III Fiber Transmission Effects, System Perspectives and Innovative Approach to Broadband mm-Wave Subcarrier Optical Signals</b>		
12	<b>Fiber Chromatic Dispersion Effects of Broadband mm-Wave Subcarrier Optical Signals and Its Elimination</b> .....	115
12.1	Effects on Multichannel Digital Millimeter-Wave Transmission ...	115
12.2	Elimination of Fiber Chromatic Dispersion Penalty on 1,550 nm Millimeter-Wave Optical Transmission .....	120

<b>13</b>	<b>Transmission Demonstrations</b>	125
13.1	1550-nm Transmission of Digitally Modulated 28-GHz Subcarriers Over 77 km of Non-Dispersion Shifted Fiber	125
13.2	39 GHz Fiber-Wireless Transmission of Broadband Multi-Channel Compressed Digital Video	130
<b>14</b>	<b>Application of Linear Fiber Links to Wireless Signal Distribution: A High-level System Perspective</b>	135
<b>15</b>	<b>Improvements in Baseband Fiber Optic Transmission by Superposition of High-Frequency Microwave Modulation</b>	141
15.1	Introduction	141
15.2	Interferometric Noise	142
15.2.1	Superimposed High-Frequency Modulation: External Phase Modulation	144
15.2.2	Directly Modulated Laser Diode	147
15.2.3	Superimposed Modulation With Band-Pass Gaussian Noise	149
15.3	Multimode Fiber: Modal Noise	152
15.4	Conclusion	153
<b>16</b>	<b>Millimeter-Wave Signal Transport Over Optical Fiber Links by “Feed-Forward Modulation”</b>	155
16.1	Principle of “Feed-Forward Modulation” for mm-Wave Signal Transport Over an Optical Carrier	155
16.2	Demonstration of “Feed-Forward Modulation” for Optical Transmission of Digitally Modulated mm-Wave Subcarrier	161
<b>17</b>	<b>Frequency Planning for Minimal Intermodulation Distortion</b>	165
17.1	Introduction	165
17.2	Algorithms for Single-Link Frequency Planning	166
17.2.1	Babcock Spacing	166
17.2.2	Okinaka’s Algorithm	168
17.3	Multi-Link Frequency Planning Algorithm	170
17.3.1	Modified Okinaka Algorithm for Multi-Link Frequency Planning	171
17.3.2	Measurements	173
17.4	Discussion and Conclusion	176
<b>18</b>	<b>Erbium Fiber Amplifiers in Linear Lightwave Transmission</b>	177
18.1	Introduction	177
18.2	Distortion Characteristics	178
18.2.1	EDFA Distortion Model	178
18.2.2	Experimental Results	181

18.2.3	Comparisons Between Distortions in Laser Diode with EDFA.....	187
18.3	CNR Optimization .....	188
18.3.1	Operation Point .....	189
18.3.2	Fan-Out and Fiber Loss .....	192
18.3.3	CNR Versus Length of EDFA.....	193
18.4	Discussions and Conclusions .....	195
<b>Part IV Appendices</b>		
<b>A</b>	<b>Notes on RF Link Metrics .....</b>	<b>199</b>
A.1	Notes on Relation Between Distortion Products, Noise, Spur (Spurious)-Free Dynamic Range (SFDR) .....	199
A.2	Notes on Intermodulation Distortion in a Multichannel Subcarrier Transmission System: CTB and CSO .....	201
A.2.1	Composite Triple Beat (CTB).....	201
A.2.2	Composite Second-Order Intermodulation (CSO) Distortion .....	203
A.3	Graphical Illustrations of RF Signals.....	204
<b>B</b>	<b>Ultrahigh Frequency Photodiodes and Receivers .....</b>	<b>207</b>
B.1	Ultrahigh Speed PIN Photodiodes .....	207
B.2	Resonant Receivers.....	211
<b>C</b>	<b>High Frequency Optical Modulators .....</b>	<b>213</b>
C.1	Mach Zehnder Interferometric Optical Modulator .....	214
C.2	Electroabsorption Optical Modulator .....	215
<b>D</b>	<b>Modulation Response of Superluminescent Lasers .....</b>	<b>219</b>
D.1	Introduction .....	219
D.2	The Small Signal Superluminescent Equations and Numerical Results .....	220
D.3	Effect of a Small but Finite Mirror Reflectivity .....	224
<b>E</b>	<b>Broadband Microwave Fiber-Optic Links With RF Phase Control for Phased-Array Antennas .....</b>	<b>229</b>
<b>F</b>	<b>Small Signal Traveling Wave Rate Equations for Erbium-Doped Fiber Amplifiers.....</b>	<b>235</b>
<b>G</b>	<b>Applications of High Frequency Linear Fiber-Optic Links in Defense Systems.....</b>	<b>237</b>
G.1	Electronic Counter Measure: Aerial Towed Fiber-Optic Decoy .....	237
G.2	Nuclear Test Diagnostic Instrumentation .....	238
<b>References .....</b>		<b>241</b>
