

Contents

Exploring the Possibilities of Laser Interference Patterning for the Rapid Fabrication of Periodic Arrays on Macroscopic Areas	1
Andrés Fabián Lasagni	
Laser Micromachining	29
Udo Klotzbach, Andrés Fabián Lasagni, Michael Panzner and Volker Franke	
Patterning and Optical Properties of Materials at the Nanoscale.	47
Noemí Pérez, Ainara Rodríguez and Santiago M. Olaizola	
Ion Beam Sputtering: A Route for Fabrication of Highly Ordered Nanopatterns	69
Marina Cornejo, Jens Völlner, Bashkim Ziberi, Frank Frost and Bernd Rauschenbach	
Three-Dimensional Open Cell Structures: Evaluation and Fabrication by Additive Manufacturing.	95
Jürgen Stampfl, Heinz E. Pettermann and Mathias H. Luxner	
X-ray Microtomography: Characterisation of Structures and Defect Analysis.	119
Bernhard Harrer and Johann Kastner	
Submicron Tomography Using High Energy Synchrotron Radiation	151
András Borbély, Peter Cloetens, Eric Maire and Guillermo Requena	

Nano Characterization of Structures by Focused Ion Beam (FIB) Tomography	171
Flavio Andrés Soldera, Fernando Adrián Lasagni and Frank Mücklich	
Atom Probe Tomography: 3D Imaging at the Atomic Level	201
D. Blavette, F. Vurpillot, B. Deconihout and A. Menand	

Fabrication and Characterization in the Micro-Nano
Range

New Trends for Two and Three Dimensional Structures

Lasagni, F.A.; Lasagni, A.F. (Eds.)

2011, X, 222 p., Hardcover

ISBN: 978-3-642-17781-1
