

Contents

1	Synthesis, Processing and Application of Nanostructured Coatings	1
1.1	What is Nanotechnology?	1
1.2	The Role of Size Effect in Nanotechnology	1
1.3	Nanoparticles.	3
1.4	Production of Nanoparticles	4
1.5	Applications of Nanoparticles	4
1.6	Thin Films	4
1.7	Production and Application of Thin Films	6
1.7.1	Introduction to Sol-gel Method	6
1.7.2	Sol-gel Chemical Reaction	10
1.7.3	The Effect of Catalyst Hydrolysis	11
1.7.4	Electric Precipitation	11
1.7.5	The Rotate Coating	11
1.7.6	Scattering Coating	11
1.7.7	Self Layout	12
1.7.8	Plasma Polymerization	12
1.7.9	Annealing	13
1.7.10	Heating Oxidation	14
1.8	Applications of Nanostructured Coatings	15
1.9	Coating and Surface Engineering	17
1.10	Coating Issues and Applications	17
	References	18
2	Size Dependency in Nanostructures	29
2.1	Introduction.	29
2.2	Nanocomposites and Their Production Methods.	29
2.2.1	Thermal Spraying Nano-Composites	29
2.2.2	Transitional Metal Nitride Coatings	33

2.2.3	Super Rough and Super Hard Nanocrystalline Coatings.	35
2.2.4	Nanocomposite Coatings.	37
2.3	Electrochemistry Role in Production of Nano-Coatings.	46
2.3.1	Electro-Deposition Using Porous Templates	46
2.3.2	Nano-Coatings Properties	47
2.4	Mechanical Properties.	48
2.5	Corrosion Properties.	52
2.6	Hydrogen Transition and Sensitivity.	54
2.7	Magnetic Characteristics and Ionic Conductivity	55
2.8	Thermal Stability	58
2.9	Nanocoatings Applications	58
2.9.1	Structural Applications	59
2.9.2	Functional Applications	59
2.9.3	Classification of Applications	60
2.10	Key Points for Development	60
2.10.1	Environment and Stability.	60
2.10.2	Weight and Volume Reduction	63
2.10.3	Smart Layers and Structures	63
2.10.4	Processes' Understanding	63
2.10.5	Training	63
2.11	Surface Engineering Share in Key Industry Sections	64
2.12	Estimation of Corrosion and Erosion Costs	64
2.13	Surface Engineering in Automobile Industry	65
2.14	Surface Engineering in Power Generation Industry	65
	References	66
3	Characterization of Nanostructured Coatings	77
3.1	Introduction.	77
3.2	Definition of Nanostructured Materials.	78
3.3	Thermodynamics of Nanostructured Materials	83
3.4	Interfaces Thermodynamics.	85
3.5	Interface Traction.	86
3.6	Additional Free Energy on a Solid with Nanometric Structure	89
3.7	Interface Stresses	90
3.8	Chemical Equilibrium in Curved Interface	91
3.9	Influential Interface	92
3.10	Phase Interface	93
3.11	Measurement of Thermal and Electrochemical Properties	93
3.12	Condensed and Compressed Metals	94
3.13	Methods for Production of Nanostructured Materials	95
3.14	Nano-Technological Compatibility in Coating	98
3.15	Improvement of Coating Quality Using Nanotechnology	99

3.16	Abrasion, Scratch, and Corrosion Resistant Coatings	99
3.16.1	Coatings Resistant Against Scratch, Abrasion, Corrosion, and Environmental Agents	99
3.16.2	Nano-Metric Abrasion, Scratch, and Corrosion Resistant Coatings	100
3.16.3	Using Alumina as a Scratch and Abrasion Resistant Coating.	101
3.16.4	Designing Light Resistant Panels for Plane Body.	101
3.16.5	Ceramics Reinforced by Carbon Nano-Tubes	101
3.17	Nano-Coating Resistant Against Corrosion	102
3.18	Using Nano-Particles for Coating in Transportation Industry	102
3.19	Coating Applications in Defense and Aerospace Industries	103
3.20	Using Ceramic Nano-Coatings in US Navy.	103
	References	104
4	Size Effect in Electrochemical Properties of Nanostructured Coatings	111
4.1	Introduction.	111
4.2	Thermodynamic Equilibrium	113
4.3	Classical Nucleation Theory	115
4.4	Atomic Nucleation Theory	116
4.5	Kinetics of Formation of Nucleuses in Electro-Crystallization	117
4.6	Electrode Surface Energy State	119
4.7	Nucleus Situation on Electrode Surface	120
4.8	Growth of 3-D Nano-Nucleuses	122
4.9	Metal Ion Structure	124
4.10	Double-Layer Structure.	124
4.10.1	Helmholtz-Perrin Model	125
4.10.2	Gouy-Chapman Model	125
4.10.3	Stern-Graham Model	126
4.11	Determining Stages for Rate of Electrode Reactions	126
4.12	Concentration Over-Potential.	127
4.13	Charge Transfer Over-Potential	128
4.14	Crystallization Over-Potential	128
4.15	Ohm or Resistance Over-Potential	128
4.16	Pulse Electrochemical Deposition Method.	129
4.17	Charging and De-Charging of Double Layer in Pulse Electroplating	130
4.18	Nanostructured Coating Properties	132
4.18.1	Mechanical Properties.	132
4.18.2	Catalyst Properties	133

4.18.3	Electrical Properties	133
4.18.4	Anti-Corrosive Properties	133
	References	138
5	Size Effect in Mechanical Properties of Nanostructured Coatings	149
5.1	Introduction.	149
5.2	Nanocomposite Coating Production Method	150
5.3	Provision of Nanocomposite Coatings with Plating Method	151
5.4	Plating of Nickel-Alumina Nanocomposite Coating	152
5.5	Effects of Participation of Alumina Nanoparticle in Nickel Coating.	153
5.6	Plating of Nickel-Alumina Nanocomposite Coating	153
5.7	Size Effect in Mechanical Properties of Two Dimensional Nano-Films	154
5.8	Studying Effective Factors on Simultaneous Deposition of Alumina Nanoparticles with Nickel	162
5.8.1	Effect of Density of Alumina Nanoparticles in Electrolyte Bath.	162
5.8.2	Effect of Electroplating Current Density	162
5.8.3	Distribution of Alumina Nanoparticles	164
5.8.4	Effect of Density of Nickel Ions in Plating Bath	166
5.8.5	Effect of pH	168
5.8.6	Pulse Current Effect.	169
5.9	Size Dependency of Tensile and Fatigue Strength in Ultra-Thin Films	171
5.10	Application of Coating for Strength Enhancement	173
5.11	Nano-Coating Use in Dressing Industry	173
5.11.1	Making WC/Co-Ni Nano-Coating Using Electrodeposition	174
5.11.2	Using (Me-Ti _{1-x} Al _x N)/(a-Si ₃ N ₄) Nanocomposite Coatings.	174
5.12	Size Dependency in Nanocomposite Layers	175
	References	179
6	Size Effect in Physical and Other Properties of Nanostructured Coatings	185
6.1	Introduction.	185
6.2	Silicides Specifications	189
6.2.1	SALICIDE Process	189
6.2.2	Necessary Conditions for Formation of Silicides	190

6.2.3	Transition from TiSi_2 to NiSi	191
6.2.4	NiSi Salicide Technology (Self-Aligned Nickel Silicide)	192
6.3	Size Effect in Sensing Characterization	192
6.4	NiSi Thermal Stability	195
6.4.1	NiSi Transition to NiSi_2 in Dual Ni-Si System	195
6.4.2	Pt Effect in Increasing Thermal Stability	195
6.4.3	Pd Effect in Thermal Stability	198
6.4.4	Ge Effect in Thermal Stability	199
6.4.5	Co and Ir Effects in Thermal Stability	200
6.4.6	Capsulation and NiSi Thermal Stability	200
6.5	Size Effect in Optical Properties of Nanostructured Films	201
6.6	Optical Coatings: Using Ultraviolet Light Block Layers	208
6.7	Surface Improvement for Making Fog and Vapor Resistant Layers	209
6.8	Production of Pieces with Nano-Coating	209
6.9	Self-Cleaning Glasses	209
6.10	Medical and Hygienic Applications	210
6.10.1	Inorganic Materials Nano-Coating for Medical Applications	210
6.10.2	Using Nano-Particle Masks	210
6.10.3	Application of Hydroxyapatite Nano-Coating to Design Prosthesis	211
6.10.4	Using Nanocomposite Coating for Food Packaging	211
6.10.5	Antipollution Materials in Shipping Industry	212
6.10.6	Nano-Coating Use Against SARS Virus	212
6.10.7	Application of Ag Nanoparticles as Antibacterial Coating	213
6.10.8	Using TiO_2 Nano-Particles to Decrease Environmental Contaminations	213
6.11	Electrical and Electronic Applications	213
6.11.1	Production of Transparent Conductor Coatings by Carbon Nano-Tubes	213
6.11.2	Application of Nano-Coating on Solar Cells	214
6.11.3	Nano-Coating of Nickel Particles by Oxides	215
6.11.4	Using Polarizer Nano-Layers to Produce LCD Monitors	215
6.11.5	Produce of Electrically Conductive Transparence Nano-Coatings	215
6.11.6	Increase of Data Storing Capacity with Magnetic Nano-Layers	216

6.12	Lubricating and the Other Applications	216
6.13	Ag-Polluted SnO ₂ Particles	216
6.14	Development of Nano-Coating for Surface Lubrication.	216
6.15	Size Dependency in Nanocomposite Layers	217
	References	218
7	Conclusions	225
	Index	245

Nanocoatings

Size Effect in Nanostructured Films

Aliofkhazraei, M.

2011, XII, 251 p., Hardcover

ISBN: 978-3-642-17965-5
