

# Contents

<b>1</b>	<b>Significance of Molecular and Fluid-Dynamic Approaches to Interface Phenomena</b>	<b>1</b>
1.1	Vapor–Liquid Interface and Kinetic Boundary Condition (KBC)	1
1.2	Why Are Measurements of $\alpha_e$ and $\alpha_c$ So Difficult?	6
1.2.1	Unsteady Nonequilibrium Condensation Induced by Shock Wave Reflection	6
1.2.2	Temporal Transition Phenomenon of Interface Displacement	10
1.2.3	Mechanism of Temporal Transition Phenomenon	11
1.3	Realization of Nonequilibrium States	13
1.3.1	Another Prerequisite and Shock Wave	13
1.3.2	Previous Studies of Condensation by Shock Wave	14
1.4	Constitution of This Book	15
	References	16
<b>2</b>	<b>Kinetic Boundary Condition at the Interface</b>	<b>19</b>
2.1	Microscopic Description of Molecular Systems	19
2.1.1	Equation of Motion	21
2.1.2	Liouville Equation	23
2.1.3	Definitions of Macroscopic Variables and Equations in Fluid Dynamics	24
2.2	Molecular Dynamics Simulation	31
2.2.1	Lennard-Jones Potential and Normalization of Variables	31
2.2.2	Finite Difference Method	33
2.2.3	Example: Vapor–Liquid Equilibrium State	35
2.3	Kinetic Theory of Gases	38
2.3.1	Boltzmann Equation	39
2.3.2	Boundary Condition for the Boltzmann Equation	43
2.4	Kinetic Boundary Condition	45
2.4.1	Evaporation into Vacuum	46
2.4.2	Evaporation Coefficient	49

2.4.3	Condensation Coefficient and KBC in Weak Condensation States .....	52
2.5	Asymptotic Analysis of Weak Condensation State of Methanol ....	54
2.5.1	Problem and Formulation .....	55
2.5.2	Asymptotic Analysis for Small Knudsen Numbers .....	58
2.5.3	Boundary Condition for the Equations in Fluid-Dynamics Region .....	61
2.5.4	Condensation Coefficient as a Linear Function of Mass Flux .....	64
2.6	Criticism on Hertz–Knudsen–Langmuir and Schrage Formulas .....	66
	References .....	67

### 3 Methods for the Measurement of Evaporation and Condensation Coefficients .....

3.1	Review of $\alpha_e$ , $\alpha_c$ , KBC, and Gaussian–BGK Boltzmann Equation ..	71
3.1.1	Definitions of $\alpha_e$ and $\alpha_c$ .....	71
3.1.2	Extension of Monatomic Version of KBC to Polyatomic One .....	72
3.1.3	KBC Expressed by Net Mass Flux Measured at the Interface .....	76
3.1.4	Gaussian–BGK Boltzmann Equation in Moving Coordinate System .....	77
3.2	Shock Tube Method for Measurement of Condensation Coefficient ..	78
3.2.1	Principle of Shock Tube Method .....	78
3.2.2	Characteristics of Film Condensation at Endwall behind Reflected Shock Wave .....	80
3.2.3	Mathematical Modeling of Film Condensation on Shock Tube Endwall .....	82
3.2.4	Boundary Condition at Infinity in Vapor .....	84
3.2.5	Heat Conduction in Liquid Film and Shock Tube Endwall ..	84
3.2.6	Initial Conditions .....	85
3.3	Shock Tube .....	86
3.3.1	Schematic and Performance of Shock Tube .....	86
3.3.2	Effect of Noncondensable Gases on Liquid Film Growth ...	87
3.3.3	Effect of Association of Molecules on Vapor State .....	88
3.4	Optical Interferometer .....	89
3.4.1	Theory of Optical Interferometer .....	89
3.4.2	Method of Optical Data Analysis .....	92
3.5	Properties of Adsorbed Liquid Film on Optical Glass Surface .....	93
3.5.1	Treatment of Optical Glass .....	93
3.5.2	Thickness of Temporarily Adsorbed Liquid Film .....	94
3.5.3	Refractive Index of Initially Adsorbed Liquid Film .....	95
3.6	Deduction of Condensation Coefficient .....	96
3.6.1	Typical Output Examples of Energy Reflectance .....	96
3.6.2	Time Changes of Liquid Film Thickness .....	98

3.6.3	Propagation Process of Shock Waves . . . . .	100
3.6.4	Time Changes of Macroscopic Quantities and Condensation Coefficient . . . . .	101
3.6.5	Values of $\alpha_e$ and $\alpha_c$ for Water and Methanol . . . . .	103
3.7	Sound Resonance Method for Measurement of Evaporation Coefficient . . . . .	106
	References . . . . .	108
<b>4</b>	<b>Vapor Pressure, Surface Tension, and Evaporation Coefficient for Nanodroplets . . . . .</b>	<b>111</b>
4.1	Significance of Molecular Dynamics Analysis for Nanodroplets . . . . .	111
4.2	Method of MD Simulations . . . . .	113
4.3	Computational Method of Pressures . . . . .	115
4.4	Equilibrium States of Nanodroplets and Planar Liquid Films . . . . .	116
4.4.1	General Explanation . . . . .	116
4.4.2	Density Distributions . . . . .	116
4.4.3	Pressure Distributions . . . . .	120
4.4.4	Differentiability of Normal Pressure with Respect to Radial Coordinate . . . . .	123
4.4.5	Laplace Equation and Surface Tension . . . . .	124
4.4.6	Kelvin Equation . . . . .	126
4.4.7	Tolman Equation . . . . .	129
4.5	Mass Transport Across Nanodroplet Surface . . . . .	130
4.5.1	Problem Statement . . . . .	130
4.5.2	Evaporation and Condensation Coefficients, and Mass Transfer Rate . . . . .	131
4.5.3	Vacuum Evaporation Simulations . . . . .	132
4.5.4	Mass Fluxes and Evaporation Coefficient . . . . .	133
	References . . . . .	140
<b>5</b>	<b>Dynamics of Spherical Vapor Bubble . . . . .</b>	<b>143</b>
5.1	Fluid-dynamic Definition of Interface . . . . .	143
5.2	Kinematics of Interface . . . . .	145
5.2.1	Interface Velocity . . . . .	145
5.2.2	Interface Curvature . . . . .	145
5.2.3	Time Variation of Area of Surface Element . . . . .	147
5.2.4	Surface Divergence . . . . .	150
5.2.5	Equilibrium Thermodynamics of the Interface . . . . .	152
5.3	General Conservation Equation at Interface . . . . .	153
5.3.1	Conservation Equations in Bulk Fluids . . . . .	153
5.3.2	Conservation Equation in Frame Moving with Interface . . . . .	154
5.3.3	Integration Form of Conservation Equation . . . . .	155
5.3.4	Flux Balance on Interface . . . . .	156
5.3.5	Conservation of Mass on Interface . . . . .	157

5.3.6	Conservation of Momentum on Interface . . . . .	159
5.3.7	Conservation of Energy on Interface . . . . .	161
5.4	Spherical Vapor Bubble . . . . .	162
5.4.1	Governing Equations for Spherical Bubble . . . . .	163
5.4.2	Simplification . . . . .	165
5.4.3	Boundary Conditions . . . . .	168
5.5	Practical Description of Bubble Motion . . . . .	171
5.5.1	Flow Fields in Liquid . . . . .	172
5.5.2	Uniform Pressure in Bubble Interior . . . . .	172
5.5.3	Temperature, Pressure, and Velocity Fields . . . . .	174
5.5.4	Boundary Conditions of Temperature Field . . . . .	175
5.6	Temperature Field of Bubble Exterior . . . . .	176
5.6.1	Lagrangian Formulation . . . . .	176
5.6.2	Transformation of Variables . . . . .	177
5.6.3	Laplace Transform of Heat Equation . . . . .	179
5.6.4	Inverse Laplace Transform of Heat Equation . . . . .	181
5.6.5	Liquid Temperature at Bubble Wall . . . . .	186
5.6.6	Gradient of Liquid Temperature at Bubble Wall . . . . .	188
5.7	Temperature Field of Bubble Interior . . . . .	189
5.7.1	Adiabatic Solution . . . . .	190
5.7.2	Lagrangian Formulation . . . . .	191
5.7.3	Boundary Layer Solution . . . . .	191
5.7.4	Solution of Heat Equation . . . . .	193
5.7.5	Pressure and Velocity . . . . .	196
5.8	Structure of Mathematical Model . . . . .	197
5.9	Bubble Expansion with Uniform Interior . . . . .	199
5.9.1	Assumptions . . . . .	199
5.9.2	Governing Equations and Conditions . . . . .	200
5.9.3	Heat Equation for Liquid . . . . .	202
5.9.4	Solution of Heat Equation . . . . .	203
5.9.5	Asymptotic Growth of Vapor Bubble . . . . .	206
5.9.6	Bubble Motion Coupled with Heat Conduction . . . . .	208
	References . . . . .	209
<b>Appendix A Vectors, Tensors, and Their Notations . . . . .</b>		<b>211</b>
A.1	Scalar, Vector, and Tensor . . . . .	211
A.2	Einstein Summation Convention . . . . .	212
<b>Appendix B Equations in Fluid Dynamics . . . . .</b>		<b>215</b>
B.1	Conservation Equations . . . . .	215
B.2	Conservation Equations in Component Forms . . . . .	218

<b>Appendix C</b>	<b>Supplements to Chapter 5</b>	219
C.1	Generalized Stokes Theorem	219
C.2	Characteristic Time of Heat Conduction	221
C.3	Abel's Integral Equation	223
<b>Index</b>		225

Vapor-Liquid Interfaces, Bubbles and Droplets

Fundamentals and Applications

Fujikawa, S.; Yano, T.; Watanabe, M.

2011, XIV, 230 p., Hardcover

ISBN: 978-3-642-18037-8
