

Contents

1	Basic Material	1
1.1	Bases and Trigonometric Functions	1
1.2	Strict and Uniform Convexity	3
1.3	Representations of Compact Linear Operators	20
2	Trigonometric Generalisations	33
2.1	The Functions \sin_p and \cos_p	33
2.2	Basis Properties	43
3	The Laplacian and Some Natural Variants	49
3.1	The Laplacian	49
3.2	The p -Laplacian	50
3.3	Eigenfunctions of the p -Laplacian, $n = 1$	55
3.4	Eigenfunctions of the p -Laplacian, $n > 1$	61
4	Hardy Operators	65
4.1	Conditions for Boundedness and Compactness	65
4.2	The Norm of the Hardy Operator	67
5	s-Numbers and Generalised Trigonometric Functions	73
5.1	s -Numbers and n -Widths	73
5.2	The s -Numbers of Hardy Operators	83
5.3	s -Numbers of the Sobolev Embedding on Intervals	95
6	Estimates of s-Numbers of Weighted Hardy Operators	105
6.1	Introduction and Basic Notation	105
6.2	Properties of \mathcal{A}	107
6.3	Equivalence of Strict s -Numbers for T	112
6.4	The First Asymptotic Term when $1 < p < \infty$	115
6.5	The Cases $p = \infty$ and $p = 1$	118

7	More Refined Estimates	129
7.1	Remainder Estimates	129
7.2	The Second Asymptotic Term	138
7.3	l_q and Weak- l_q Estimates when $1 < p < \infty$	141
7.4	l_q and Weak- l_q Estimates, Cases $p = 1$ and ∞	149
8	A Non-Linear Integral System	153
8.1	Upper and Lower Estimates for a Non-Linear Integral System	153
8.2	The Case $q \leq p$	165
8.3	The Case $p \leq q$	175
8.4	The Case $p = q$	182
9	Hardy Operators on Variable Exponent Spaces	183
9.1	Spaces with Variable Exponent	183
9.2	Hardy Operators	192
9.2.1	The Case when p is a Step-Function	196
9.2.2	The Case when p is Strongly Log-Hölder-Continuous	198
9.3	A Version of the p -Laplacian	207
	References	211
	Index	217

Eigenvalues, Embeddings and Generalised
Trigonometric Functions

Lang, J.; Edmunds, D.E.

2011, XI, 220 p. 10 illus., Softcover

ISBN: 978-3-642-18267-9
