Part I Introduction

1 Introduction	3
Dorothea Bartels, Ulrich Lüttge, and Erwin Beck	
References	7

Part II The Organismic Level

2 Cyanobacteria: Habitats and Species	11
Burkhard Büdel	
2.1 Introduction	11
2.2 Cyanobacterial Anhydrobiosis and Resistance to Complete Desiccation	11
2.3 Habitats and Species	13
2.4 Conclusion	18
References	18
3 Cyanobacteria: Multiple Stresses, Desiccation-Tolerant Photosynthesis and Di-nitrogen Fixation	23
Ulrich Lüttge	
3.1 Multiple Stresses and Desiccation-Tolerant Cyanobacteria	23
3.2 Cell Physiological Responses of Cyanobacteria to Stress of Drying Leading the Path to Desiccation	24
3.2.1 Compatible Solutes	24
3.2.2 Heat Shock and Water Stress Proteins	25
3.2.3 Sun Protectants	25
3.2.4 Membrane Lipids	25
3.2.5 Polynucleotide Stability and Repair	26
3.3 Photosynthesis	26

3.3.1	Special Features of Cyanobacterial Photosynthesis	26
3.3.2	Desiccation and Photoinhibition	27
3.3.3	Recovery of Photosynthesis During Rewetting After Desiccation	30
3.3.4	Physiological Ecology of Desiccation on the Rock Outcrops of Tropical Inselbergs	34
3.4	Biological Fixation of Di-nitrogen (N ₂)	37
3.4.1	N ₂ -Fixation and Input into Ecosystems	37
3.4.2	Recovery of N ₂ -Fixation During Rewetting After Desiccation	38
3.5	Conclusions	39
	References	40
4	Eukaryotic Algae	45
	Burkhard Büdel	
4.1	Introduction	45
4.2	Habitats and Species	47
4.2.1	Marine Coastal Algae	47
4.2.2	Terrestrial Algae	50
4.3	Physiological Ecology	57
4.3.1	Photosynthetic Patterns of Marine Algae	57
4.3.2	Release of Dissolved Organic Carbon During Rehydration	58
4.3.3	Drought Period and Resurrection	58
4.3.4	Antioxidants as a Protective Means	59
4.3.5	Compatible Solutes	60
4.3.6	Ultrastructure	60
4.4	Conclusion	60
	References	61
5	Lichens and Bryophytes: Habitats and Species	65
	Michael Lakatos	
5.1	Characteristics of Lichens and Bryophytes	65
5.2	Mechanisms of Water Exchange in Lichens and Bryophytes Allowing Desiccation Tolerance	66
5.3	Processes at Intermittent Desiccation Between Activity and Inactivity	68
5.4	Functioning and Impacts of Non-vascular Plants at Microhabitats	71
5.4.1	Impacts of Non-vascular Plants at Microhabitats	71
5.4.2	Functioning of Non-vascular Soil Cover	72
5.4.3	Functioning of Non-vascular Epiphytic Cover	74
5.5	Global Patterns of Desiccation-Tolerant Lichens and Bryophytes	75
5.5.1	Global Patterns as an Indication for the Ecological Relevance	75
5.5.2	Impacts of Lichens and Bryophytes on the Carbon Cycle	76

5.5.3 Impacts of Lichens and Bryophytes on the Hydrological Cycle	77
5.6 Conclusion	78
References	78
6 Ecophysiology of Desiccation/Rehydration Cycles in Mosses and Lichens	89
T.G. Allan Green, Leopoldo G. Sancho, and Ana Pintado	
6.1 Introduction	89
6.1.1 Desiccation Tolerance: The Limits	91
6.1.2 Desiccation Tolerance: Physiology	97
6.2 Photosynthetic Response to Thallus Water Content	101
6.2.1 Overall Structure of the Photosynthesis/Water Content Response	101
6.2.2 Thallus Water Content: The Limits	102
6.2.3 Water Content Response Curve: WC_{opt}	103
6.2.4 Water Content Response Curve: The Ψ Dominated Zone ...	103
6.2.5 Water Content Response Curve: External Water Zone	107
6.3 Aligning Physiology with Habitat	112
6.4 Ecophysiological Implications of Hydration, Rehydration and the NP Response to WC	113
6.4.1 What Constrains the Bryophyte/Lichen Niche?	113
6.4.2 Lichens Versus Bryophytes: The Differences	114
6.5 Conclusions	115
References	116
7 Lichens and Bryophytes: Light Stress and Photoinhibition in Desiccation/Rehydration Cycles – Mechanisms of Photoprotection ..	121
Ulrich Heber and Ulrich Lüttge	
7.1 Introduction	121
7.2 Conservation Versus Thermal Dissipation of Absorbed Light Energy in Hydrated Poikilohydric Photoautotrophs	122
7.3 Changes in Conservation and Thermal Dissipation of Absorbed Light Energy During Slow Desiccation	124
7.4 Desiccation-Induced Decreased Light Absorption and Shading of Photobionts as Auxiliary Mechanisms of Photoprotection	129
7.5 Fast Thermal Energy Dissipation in Desiccated Poikilohydric Photoautotrophs as Central Mechanism of Photoprotection	130
7.6 Changes in Conservation and Thermal Dissipation of Absorbed Light Energy upon Hydration	131
7.7 Vulnerability of PSII RCs to Photooxidative Damage	133
7.8 Molecular Mechanisms of Photoprotection	134
7.9 Conclusions	134
References	135

8 Evolution, Diversity, and Habitats of Poikilohydrous	
Vascular Plants	139
Stefan Porembski	
8.1 Introduction	139
8.2 Systematic Distribution and Evolutionary Aspects	140
8.2.1 “Ferns” and “Fern Allies”	140
8.2.2 Angiosperms	143
8.3 Habitats and Geographic Distribution	146
8.4 Adaptive Traits	151
8.5 Economic Importance	153
8.6 Conservation	153
References	154
9 Ecophysiology of Homoiochlorophyllous and Poikilochlorophyllous	
Desiccation-Tolerant Plants and Vegetations	157
Zoltán Tuba and Hartmut K. Lichtenthaler	
9.1 Introduction	157
9.2 Distribution and Evolutionary Aspects of Desiccation Tolerance in Plants	158
9.3 Habitats and Vegetation of Desiccation-Tolerant Plants	160
9.4 The Poikilochlorophyll Desiccation-Tolerance Strategy	160
9.5 The Desiccoplast, a Very Specialized, New Type of Chloroplast	162
9.5.1 Desiccation of Leaves and Desiccoplast Formation	163
9.5.2 Rehydration of Leaves and Resynthesis of Functional Chloroplasts	165
9.6 Differential Physiological Responses of Individual Vascular HDT and PDT Plants Under Desiccation	170
9.6.1 Chlorophyll Content and Chloroplast Ultrastructure	170
9.6.2 Abscissic Acid and Chlorophyll Breakdown	171
9.6.3 Photosystem II Electron Transport and Thermoluminescence	171
9.6.4 CO ₂ Assimilation	172
9.6.5 CO ₂ Gas Exchange and Respiration	173
9.6.6 Leaf Responses	173
9.7 Recovery and Reestablishment of Physiological Activity of Vascular Homoiochlorophyllous and Poikilochlorophyllous Plants	174
9.8 Revival of Metabolism: Reassembly or Repair?	175
9.9 Constitutive and Induced Tolerance	176
9.10 Importance of Scale and Ecological Context	178
References	179
