Part I Historical Background and Future Trends

1	A Historical Perspective of Generalized Continuum Mechanics	3
	G�rard A. Maugin	
1.1	Introduction	3
1.2	From Cauchy and the 19 th Century	4
1.3	True Generalizations	5
1.4	Conclusions	13
	References	14

Part II Beams, Plates, and Shells

2	Micropolar Shells as Two-dimensional Generalized Continua Models	23
	Holm Altenbach, Victor A. Eremeyev, and Leonid P. Lebedev	
2.1	Introduction	24
2.2	Basic Relations of Micropolar Shell Theory	25
2.3	Constitutive Restrictions for Micropolar Shells	36
2.4	Phase Equilibrium Conditions in Micropolar Shells	46
2.5	Conclusions	52
	References	52
3	Structural Dynamics and Generalized Continua	57
	C�line Chesnais, Claude Boutin, and St�phane Hans	
3.1	Introduction	57
3.2	Overview of Discrete Homogenization	58
3.3	Studied Structures	60
3.4	Transverse Vibrations	61
3.5	Longitudinal Vibrations	67
3.6	Extension and Application to Buildings	68
3.7	Conclusion	75

References	75
4 A Bending-gradient Theory for Thick Laminated Plates	
Homogenization	77
Arthur Lebé and Karam Sab	
4.1 Introduction	77
4.2 Notations	78
4.3 Revisiting the Reissner-Mindlin Plate Theory	79
4.4 The Bending-gradient Plate Model	84
4.5 Application to Laminates	87
4.6 Conclusion	93
References	94
Part III Advanced Constitutive Models	
5 Internal Length Scale Effects on the Local and Overall Behavior of Polycrystals	99
Stéphane Berbenni	
5.1 Introduction	100
5.2 Field Equations and Thermodynamics	102
5.3 Resolution Methods	104
5.4 Continuum Theory of Defects and Mean Field Approaches	108
5.5 Modeling Intragranular Slip Bands as Super-dislocation Loops ...	111
5.6 Modeling Intragranular Slip Bands as Plastic Oblate Spheroids ...	120
5.7 Towards new Interaction Laws Including Discrete Plasticity	128
5.8 Conclusions	132
References	133
6 Formulations of Strain Gradient Plasticity	137
Samuel Forest and Albrecht Bertram	
6.1 Introduction	137
6.2 Derivation Based on the Exploitation of the Entropy Principle ...	139
6.3 Derivation Based on the Modification of the Energy Principle ...	141
6.4 Analysis of a Simple BVP for Laminate Microstructures	143
6.5 Discussion	147
References	148
7 On one Model of Generalized Continuum and its Thermodynamical Interpretation	151
Elena A. Ivanova	
7.1 Introduction	151
7.2 The Simplest Model of a Body-point	153
7.3 Continuum of One-rotor Gyrostats	160
7.4 The Simplest Theory of One-rotor Gyrostats Continuum	163
7.5 Temperature and Entropy	165
7.6 Linear Theory of Thermoelasticity	166

7.7	Model of Internal Damping	168
7.8	Interaction of Body-point and “Thermal Ether”	170
7.9	Conclusion	173
	References	174
8	Micromechanical Bases of Superelastic Behavior of Certain Biopolymers.	175
	Rasa Kazakevičiūtė-Makovska and Holger Steeb	
8.1	Introduction	175
8.2	Macroscopic Thermo-mechanical Properties of WECB	176
8.3	Structure of WECB and Micro-mechanisms of Straining	179
8.4	Micromechanically Motivated Constitutive Models	180
8.5	Non-gradient Models and Pseudo-elasticity	182
8.6	Constitutive Model of Superelasticity	183
8.7	Identification of Response Functions: 1D Theory	185
8.8	Special Models	189
8.9	Discussion	190
	References	191
9	Construction of Micropolar Continua from the Homogenization of Repetitive Planar Lattices.	193
	Francisco Dos Reis and Jean-François Ganghoffer	
9.1	Introduction	193
9.2	Micropolar Constitutive Equations	195
9.3	Asymptotic Parameters	197
9.4	Asymptotic Homogenization of Polar Lattices	199
9.5	Examples	209
9.6	Conclusions and Perspectives	215
	References	216
	Part IV Dynamics and Stability	
10	Nonlinear Waves in the Cosserat Continuum with Constrained Rotation.	230
	Vladimir I. Erofeev, Aleksandr I. Zemlyanukhin, Vladimir M. Catson, and Sergey F. Sheshenin	
10.1	Basic Hypotheses and Dynamic Equations	221
10.2	Derivation of Evolution Equations	223
10.3	Numerical Simulation	225
	References	230
11	Wave Propagation in Quasi-continuous Linear Chains with Self-similar Harmonic Interactions - Towards a Fractal.	231
	Thomas M. Michelitsch, Gérard A. Maugin, Franck C. G. A. Nicolleau, Andrzej F. Nowakowski and Shahram Derogar	
11.1	Introduction	232
11.2	The Mathematical Framework	233
11.3	The Physical Model	239

11.4	Density of Normal Modes	241
11.5	Conclusions	244
	References	244
12	Nonlinear Dynamic Processes in Media with Internal Structure	245
	Alexey V. Porubov, Boris R. Andrievsky and Eron L. Aero	
12.1	Governing Equations	245
12.2	Localized Macro-strain Waves in Crystalline Lattice	246
12.3	Generation of Localized Defects in Crystalline Lattice	249
12.4	Conclusions	254
	References	254
13	Buckling of Elastic Composite Rods made of Micropolar Material Subjected to Combined Loads	255
	Denis Sheydakov	
13.1	Introduction	255
13.2	Equilibrium of the Compressed Composite Cylinder	256
13.3	Equations of Neutral Equilibrium	259
13.4	Numerical Results	266
13.5	Conclusion	269
	References	270
Part V Geometry and Defects		
14	Theory of Isolated and Continuously Distributed Disclinations and Dislocations in Micropolar Media	
	Mikhail I. Karyakin and Leonid M. Zubov	275
14.1	Introduction	275
14.2	Isolated Defects in Nonlinearly Bodies with Couple Stresses	276
14.3	Continuously Distributed Dislocations and Disclinations	283
14.4	Singular Solutions of the Nonlinear Theory of Elastic Dislocations	287
	References	289
15	Form-Invariance of Lagrangian Function for Gradient Continuum	291
	Nirmal Antonio Tamarasselvame and Lalaonirina R. Rakotomanana	
15.1	Introduction	291
15.2	Mathematical Preliminaries and Framework	295
15.3	Quotient Law	302
15.4	Dependence with Respect to the Metric	304
15.5	Invariance with Respect to the Connection	309
15.6	Strain Gradient Continuum	314
15.7	Concluding Remarks	315
	Appendix 1	316
	Appendix 2	317
	References	320

Part VI Further Applications

16 Cahn-Hilliard Generalized Diffusion Modeling Using the Natural Element Method	325
Paul Fischer, Amirtham Rajagopal, Ellen Kuhl, and Paul Steinmann	
16.1 Introduction	325
16.2 Governing equations	326
16.3 Decomposition of the diffusion equation	328
16.4 Weak form of the Cahn-Hilliard equation	329
16.5 The natural element method	329
16.6 Time integration	332
16.7 Stiffness matrices	332
16.8 Computational results	333
16.9 Conclusions	334
References	336
17 Constitutive Models of Mechanical Behavior of Media with Stress State Dependent Material Properties.	339
Evgeny V. Lomakin	
17.1 Introduction	339
17.2 Constitutive Relations for Isotropic Materials	341
17.3 Constitutive Relations for Anisotropic Materials	343
17.4 Conclusions	349
