

Contents

1 Introduction	1
Putting Reservoir Simulations into Context	2
Idea Behind Truncated and Plurigaussian Simulations	3
Key Steps in a Plurigaussian Simulation	6
Step 1: Choosing the Model Type	6
Step 2: Estimating the Parameter Values	6
Step 3: Generating Gaussian Values at Wells/Drill-Holes	7
Step 4: Simulating Values at Grid Nodes Given Values at Wells	7
Recent Developments	7
History Matching	8
Layout of the Book	9
2 From a Mathematical Point of View	11
Non Centered Covariance Between Two Indicators	16
Centered Covariance Between One Indicator and One Gaussian	17
Examples	17
Linear Case with One Gaussian ($n = 1$)	17
Non Linear Case with One Gaussian: A Gamma Process	18
Nonlinear Case with One Gaussian and a Third Order Polynomial	20
Linear Case with Two Gaussians ($n = 2$)	21
Linear Case with Two Gaussians and Two Categorical Constraints	23
Non Linear Case with Two Gaussians	24
Linear Case with One Gaussian $Z(x)$ and Seismic Constraints $S(x)$	24
Simulating a Truncated Gaussian	26
Convergence of the Gibbs Sampler	28
The Untruncated Case	28
Convergence in the Truncated Gaussian Case	30
Markov Chains	30
Two Integral Operators	31
Stationary Distribution	32
Irreducible Chain	32

Distance Metric and Convergence	33
The Gibbs Sampler	35
Truncated Gaussian Case	36
Summary	38
Annex 1: Conditional Distribution of a Gaussian	39
Basic Properties of a Gaussian Vector	39
3 Basic Properties of Indicators	41
Spatial Covariances, Variograms and Cross-Variograms	42
Spatial Covariances	42
Variograms and Cross-Variograms	42
Variogram Properties	43
Need for a Mathematically Consistent Method	48
Transition Probabilities	49
First Type of Transition Probability	49
Second Type of Transition Probability	51
Exercises	53
4 Proportions	59
How to Calculate Vertical Proportion Curves	59
Example 1: The Ravenscar Sequence	60
Example 2: Facies with Contrasting Anisotropies in a Gold Deposit ..	62
Horizontal Non-stationarity	63
Choosing the Reference Level	67
Non-stationarity	72
5 Truncation and Thresholds	73
Basic Principle in the Truncated Gaussian Method	73
Defining the Thresholds	73
Transitions Between Facies	74
Link Between Thresholds and Proportions	76
Non Stationary Facies	77
Idea Behind the Plurigaussian Method	77
Link with the Proportions	79
Parameter Simplification: Use of Thresholds	79
Choice of the Partition	80
Choice of the Correlation Matrix	81
Calculating the Thresholds	83
Generalisation to Non-stationary Case	84
When Simulations Show “Prohibited” Contacts	84
Higher Dimensional Rock-Type Rules	85
6 Variograms and Structural Analysis	87
Experimental Variograms and Cross-Variograms for Facies	87

Linking the Indicator Variograms to the Underlying Variograms	88
Variograms	88
Cross-Variograms	89
Truncated Gaussian Method	89
Cross-Variograms	90
Truncated Plurigaussian Method	90
Variograms	90
Cross-Variograms	93
Generalisation to the Non-stationary Case	93
Experimental Variograms	93
Indicator Variogram Model (Truncated Gaussian Model)	95
Variogram and Cross-Variogram Model (Truncated Plurigaussian Method, two Gaussian Functions)	96
Comparing Variogram Models for Indicators and Gaussian Functions ..	96
Sill of the Indicator Model	97
Shape of the Indicator Model	97
Practical Range of the Indicator Model	97
Anisotropies	100
Variogram Fitting	101
Stationary Case	101
Non-stationary Case	102
Transition Probabilities	104
7 Gibbs Sampler	107
Why We Need a Two Step Simulation Procedure	107
Simulating $Z(x)$ and $Z(y)$ When There Are No Constraints	108
Simulating $Z(x)$ and $Z(y)$ When $Z(y)$ Belongs to an Interval	108
Simulating $Z(x)$ and $Z(y)$ When Both Belong to Intervals	111
Direct Simulation Using an Acceptance/Rejection Procedure	111
Gibbs Sampler	112
Four Sample Example	112
Alternative Updating Strategies	115
Experimentally Testing Convergence	116
Burn-in Period	116
Effect of the Range on the Burn-in Period	117
The Impact of Different Parallel Runs	119
8 Case Studies and Practical Examples	121
Choosing Which Simulation Method to Use	121
Sequence-Based Pixel Models	121
Object-Based Models	122
Nested Simulations	123
Building up the Reservoir or Orebody Model	124
Step 1: Defining the Lithotypes	124

Step 2: Dividing Reservoir or Orebody into Units	124
Step 3: Defining the Reference Level	124
Step 4: Choosing the Grid Spacing	125
Petroleum Applications of the Plurigaussian Approach	126
Constructing the Lithotype Rule with Geological Constraints	126
Simulation of Reservoir with Complex Facies Transitions	126
Simulation of the Effects of Primary Diagenesis in Complex Reservoir	129
Simulating Progradational Patterns	131
Simulation of Fractures Affecting a Specific Facies	132
Testing the Impact of Simulation Parameters	132
Testing the Impact of the Rock-Type Rule	134
Handling Heterotopic Data	134
Mining Applications of the Plurigaussian Approach	138
Roll-Front Uranium Deposit	138
First Issue	139
Second Issue	142
Simulation of a Porphyry Copper Deposit: Non-sedimentary Environment	144
9 Freeware	149
Introduction	149
Installation	149
Installation Instructions for Windows Users	149
Installation Instructions for Linux Users	150
Description of <i>PluriDemoSimu</i>	150
The Choice of the Model	150
The Rock Type Rule	151
Vertical Proportions	152
Simulation Outcome	152
Limitations of the Program	154
Description of <i>PluriDemoVario</i>	154
Choice of the Model	155
Rock Type Rule	156
Proportions of Lithotypes	156
Direction for Calculation	156
Indicator Variograms	156
Description of <i>PluriDemoSet</i>	158
Choice of the Underlying GRF	158
The Proportions	160
Particular Case	160
References	163
Index	173

Plurigaussian Simulations in Geosciences

Armstrong, M.; Galli, A.; Beucher, H.; Loc'h, G.; Renard,
D.; Doligez, B.; Eschard, R.; Geffroy, F.

2011, X, 176 p., Hardcover
