

Contents

1	Accretion and Shifts of the Levels of O₂ and CO₂ in the Biosphere	1
1.1	Evolution of an Aerobic Biosphere	1
1.2	Fluctuations of Oxygen Levels	16
1.3	Fluctuations of Carbon Dioxide Levels	19
1.4	Energy Production Versus Oxygen Toxicity: The Paradox	21
1.5	Oxygen and Carbon Dioxide: Molecular Factors in Respiration	26
2	Fundamental Principles of Gas Exchangers	31
2.1	General Observations	31
2.2	Mechanistic Essential: Diffusion	41
2.3	Mechanistic Essential: Ventilation	49
2.4	Mechanistic Essential: Perfusion	55
3	Physicochemical Properties of Respiratory Fluid Media and Gases	59
3.1	General Principles	59
3.2	Water	64
3.3	Air	73
3.4	Oxygen	74
3.5	Carbon Dioxide	75
3.6	Energetic Cost of Procuring O ₂ from Water and Air	78
4	Some Molecular Aspects in the Biology of Respiration	85
4.1	Development of the Mammalian Lung	85
4.1.1	Branching Morphogenesis	85
4.1.2	Genetic and Molecular Signaling Factors	89
4.2	Development of the Avian Lung	99
4.3	Development of the Insectan Tracheal System	101
4.4	Development of Gas Exchangers: The Bottom Line	103

4.5 Cellular and Molecular Aspects of O ₂ Sensing	104
4.6 Metal-Based O ₂ -Binding Proteins	111
4.7 Gaseous Signaling Molecules	120
4.7.1 General Considerations	120
4.7.2 Nitric Oxide	122
4.7.3 Carbon Monoxide	126
4.7.4 Hydrogen Sulfide	129
4.8 Surfactant	131
5 Functional Designs of the Gas Exchangers	141
5.1 General Considerations	141
5.2 Gills	151
5.2.1 Simple (Primitive) Gills	151
5.2.2 Complex Gills	152
5.3 Transitional (Bimodal) Breathing	158
5.3.1 General Observations	158
5.3.2 Air-Breathing Fish	159
5.4 Lungs: General Considerations	163
5.4.1 Amphibian Lung	171
5.4.2 Reptilian Lung	177
5.4.3 Mammalian (Bronchioalveolar) Lung	182
5.4.4 Avian (Parabronchial) Lung	190
5.5 Tracheal Respiration	209
References	223
Subject Index	317

Bioengineering Aspects in the Design of Gas
Exchangers

Comparative Evolutionary, Morphological, Functional,
and Molecular Perspectives

Maina, J.N.

2011, XIV, 329 p., Hardcover

ISBN: 978-3-642-20394-7
