1	Introduction	1
2	Model Formulation	9
2.1	The Verhulst Model for Population Growth	9
2.2	The SIS Model for Spread of Infection Without Immunity	12
2.3	A Contact Process on a Complete Graph	14
2.4	Some Early Stochastic Logistic Models	14
2.5	Parameter Spaces	15
3	Stochastic Process Background	17
3.1	Formulation of a Birth–Death Process	18
3.2	Two Auxiliary Processes	19
3.3	The Quasi-stationary Distribution \mathbf{q}	20
3.4	The Time to Extinction	25
3.5	Ordering Relations Between Probability Vectors	29
3.6	Three Basic Properties of the Map Ψ	31
3.7	The Stationary Distribution $\mathbf{p}^{(0)}$ Is a Lower Bound of the Quasi-stationary Distribution \mathbf{q}	34
3.8	The Stationary Distribution $\mathbf{p}^{(1)}$ is an Upper Bound of the Quasi-stationary Distribution \mathbf{q} for the SIS Model	36
3.9	Monotonicity of Two Expressions for the SIS Model	38
4	The SIS Model: First Approximations of the Quasi-stationary Distribution	41
5	Some Approximations Involving the Normal Distribution	47
5.1	Approximations of the Normal Density Function ϕ and of Its Reciprocal ϕ^* at the Argument $\hat{y}(k+x)$	50

5.2	Approximations of the Normal Distribution Function Φ and of the Integral Φ^* of the Reciprocal of the Normal Density Function at the Argument $\hat{y}(k+x)$	51
5.3	Approximations of the Ratios Φ/ϕ and Φ^*/ϕ^*	53
5.4	An Approximation of a Sum of Normal Densities.....	57
5.5	An Approximation of a Sum of Reciprocals of Normal Densities	66
5.6	On the Cox Continuity Correction	71
6	Preparations for the Study of the Stationary Distribution $\mathbf{p}^{(1)}$ of the SIS Model	73
6.1	A General Approximation of ρ_n	73
6.2	Three Specific Approximations of ρ_n	79
6.3	Approximations of $\sum_{n=1}^N \rho_n$	81
6.3.1	Approximation of $\sum_{n=1}^N \rho_n$ for $R_0 > 1$	84
6.3.2	Approximation of $\sum_{n=1}^N \rho_n$ for $R_0 < 1$	87
6.3.3	Approximation of $\sum_{n=1}^N \rho_n$ in the Transition Region	89
7	Approximation of the Stationary Distribution $\mathbf{p}^{(1)}$ of the SIS Model	93
7.1	Approximation of the Stationary Distribution $\mathbf{p}^{(1)}$ when R_0 is Distinctly Above One	93
7.2	Approximation of the Stationary Distribution $\mathbf{p}^{(1)}$ when R_0 is Distinctly Below One	94
7.3	Reparametrization of R_0 in the Transition Region	96
7.4	Approximation of the Stationary Distribution $\mathbf{p}^{(1)}$ in the Transition Region	98
8	Preparations for the Study of the Stationary Distribution $\mathbf{p}^{(0)}$ of the SIS Model	101
8.1	Approximation of π_n	101
8.2	Approximations of $\sum_{n=1}^N \pi_n$	103
8.2.1	Approximation of $\sum_{n=1}^N \pi_n$ for $R_0 > 1$	104
8.2.2	Approximation of $\sum_{n=1}^N \pi_n$ for $R_0 < 1$	106
8.2.3	Approximation of $\sum_{n=1}^N \pi_n$ in the Transition Region	107
9	Approximation of the Stationary Distribution $\mathbf{p}^{(0)}$ of the SIS Model	115
9.1	Approximation of the Stationary Distribution $\mathbf{p}^{(0)}$ when R_0 is Distinctly Above One	115
9.2	Approximation of the Stationary Distribution $\mathbf{p}^{(0)}$ when R_0 is Distinctly Below One	117
9.3	Approximation of the Stationary Distribution $\mathbf{p}^{(0)}$ in the Transition Region	117

10 Approximation of Some Images Under Ψ for the SIS Model	119
10.1 Approximations of $\Psi(\mathbf{p}^{(1)})$ and $\Psi(\mathbf{p}^{(0)})$ when R_0 is Distinctly Above One	120
10.2 Approximation of $\Psi(\mathbf{p}^{(1)})$ when R_0 is Distinctly Below One	127
10.3 Approximation of $\Psi(\mathbf{p}^{(1)})$ in the Transition Region	130
10.4 Approximation of $\Psi^i(\mathbf{p}^{(1)})$ in the Transition Region	135
11 Approximation of the Quasi-stationary Distribution \mathbf{q} of the SIS Model	141
11.1 Approximation of the Quasi-stationary Distribution \mathbf{q} when R_0 is Distinctly Above One	141
11.2 Approximation of the Quasi-stationary Distribution \mathbf{q} when R_0 is Distinctly Below One	143
11.3 Approximation of the Quasi-stationary Distribution \mathbf{q} in the Transition Region	145
12 Approximation of the Time to Extinction for the SIS Model	149
12.1 Approximation of the Time to Extinction when R_0 is Distinctly Above One	149
12.2 Approximation of the Time to Extinction when R_0 is Distinctly Below One	152
12.3 Approximation of the Time to Extinction in the Transition Region	153
13 Uniform Approximations for the SIS Model	155
13.1 Asymptotic Approximations of H_1, H_0, H , and R	157
13.2 Uniform Approximation of the Stationary Distribution $\mathbf{p}^{(1)}$	161
13.3 Uniform Approximation of the Stationary Distribution $\mathbf{p}^{(0)}$	163
13.4 Uniform Approximation of the Quasi-stationary Distribution \mathbf{q}	166
13.5 Uniform Approximation of the Time to Extinction	169
14 Thresholds for the SIS Model	171
15 Concluding Comments	177
A Notation	183
B A Maple Module for Numerical Evaluations	187
