

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Perturbation Method: Lindstedt-Poincaré</b>	<b>9</b>
2.1	The Oscillator with Cubic Elastic Restoring Force	14
2.1.1	The Exact Solution of Duffing Equation	14
2.1.2	Use of the Perturbation Method for Duffing Oscillator with Small Parameter	17
2.1.3	Use of the Perturbation Method for Duffing Oscillators with Strong Parameter	19
<b>3</b>	<b>The Method of Harmonic Balance</b>	<b>31</b>
3.1	Free Vibrations of Cantilever Beam	35
3.2	Rational Harmonic Balance Method	40
<b>4</b>	<b>The Method of Krylov and Bogolyubov</b>	<b>47</b>
4.1	Oscillator with Linear and Cubic Elastic Restoring Force and Weak Asymmetric Quadratic Damping	53
4.2	Use of the Method of Krylov-Bogolyubov and Iteration Method to Weakly Nonlinear Oscillators	60
4.2.1	“Nonresonance” Case ( $\omega \neq \frac{p}{q}\Omega$ )	61
4.2.2	“Resonance” Case $\omega \approx \frac{p}{q}\Omega$	66
4.2.3	Numerical Examples	72
<b>5</b>	<b>The Method of Multiple Scales</b>	<b>83</b>
5.1	Duffing Oscillator with Softening Nonlinearity	89
5.2	A Parametric System with Cubic Nonlinearity Coupled with a Lanchester Damper	96
<b>6</b>	<b>The Optimal Homotopy Asymptotic Method</b>	<b>103</b>
6.1	Basic Idea of OHAM	106
6.2	Duffing Oscillator	112
6.2.1	Numerical Examples	114

6.3	Thin Film Flow of a Fourth Grade Fluid Down a Vertical Cylinder . . . . .	116
6.4	Damped Oscillator with Fractional-Order Restoring Force . . . . .	120
6.4.1	Numerical Examples . . . . .	125
6.5	Nonlinear Equations Arising in Heat Transfer . . . . .	127
6.5.1	Cooling of a Lumped System with Variable Specific Heat . . . . .	127
6.5.2	The Temperature Distribution Equation in a Thick Rectangular Fin Radiation to Free Space . . . . .	131
6.6	Blasius' Problem . . . . .	133
6.7	Oscillations of a Uniform Cantilever Beam Carrying an Intermediate Lumped Mass and Rotary Inertia . . . . .	143
6.8	Oscillations of an Electrical Machine . . . . .	151
6.9	Oscillations of a Mass Attached to a Stretched Elastic Wire . . . . .	156
6.10	Nonlinear Oscillator with Discontinuities . . . . .	162
6.11	Nonlinear Jerk Equations . . . . .	168
6.12	The Motion of a Particle on a Rotating Parabola . . . . .	173
6.13	Nonlinear Oscillator with Discontinuities and Fractional-Power Restoring Force . . . . .	184
6.14	Oscillations of a Flexible Cantilever Beam with Support Motion . . . . .	191
6.15	The Jeffery-Hamel Flow Problem . . . . .	197
6.15.1	Numerical Examples . . . . .	206
<b>7</b>	<b>The Optimal Homotopy Perturbation Method . . . . .</b>	<b>211</b>
7.1	Homotopy Perturbation Method . . . . .	211
7.2	Modified Homotopy Perturbation Method . . . . .	214
7.3	Basic Idea of Optimal Homotopy Perturbation Method and Some Applications . . . . .	227
7.4	A Heat Transfer Problem . . . . .	230
7.5	Thin Film Flow of a Fourth Grade Fluid Down a Vertical Cylinder . . . . .	234
7.6	Nonlinear Dynamics of an Electrical Machine Rotor-Bearing System . . . . .	240
7.7	A Non-conservative Oscillatory System of a Rotating Electrical Machine . . . . .	252
<b>8</b>	<b>The Optimal Variational Iteration Method . . . . .</b>	<b>259</b>
8.1	The Variational Iteration Method and Applications . . . . .	259
8.1.1	Nonlinear Oscillator with Quadratic and Cubic Nonlinearities . . . . .	264
8.1.2	A Family of Nonlinear Differential Equations . . . . .	270
8.1.3	The Duffing Equation . . . . .	271
8.2	Mathematical Description of the Optimal Variational Iteration Method . . . . .	275

8.3	Duffing-Harmonic Oscillator . . . . .	275
8.4	Oscillations of a Uniform Cantilever Beam Carrying an Intermediate Lumped Mass and Rotary Inertia . . . . .	281
8.5	Thin Film Flow of a Fourth-Grade Fluid Down a Vertical Cylinder . . . . .	286
8.6	Dynamic Analysis of a Rotating Electric Machine . . . . .	292
8.7	Oscillators with Fractional-Power Nonlinearities . . . . .	297
8.8	A Boundary Layer Equation in Unbounded Domain . . . . .	305
<b>9</b>	<b>Optimal Parametric Iteration Method . . . . .</b>	<b>313</b>
9.1	Short Considerations . . . . .	313
9.1.1	A Combination of Mickens and He Iteration Methods . . .	315
9.1.2	An Iteration Procedure with Application to Van der Pol Oscillator . . . . .	326
9.2	Basic Idea of Optimal Parametric Iteration Method . . . . .	334
9.3	Thin Film Flow of a Fourth Grade Fluid Down a Vertical Cylinder . . . . .	335
9.4	Thermal Radiation on MHD Flow over a Stretching Porous Sheet . . . . .	338
9.5	The Oscillator with Cubic and Harmonic Restoring Force . . . . .	342
9.6	Oscillations of a Uniform Cantilever Beam Carrying an Intermediate Lumped Mass and Rotary Inertia . . . . .	351
9.7	A Modified Van der Pol Oscillator . . . . .	356
9.8	Volterra's Population Model . . . . .	363
9.9	Thomas-Fermi Equation . . . . .	368
9.10	Swirling Flow Downstream of a Turbine Runner . . . . .	373
9.11	Lotka-Volterra Model with Three Species . . . . .	378
	<b>References . . . . .</b>	<b>385</b>
	<b>Index . . . . .</b>	<b>393</b>

Nonlinear Dynamical Systems in Engineering

Some Approximate Approaches

Marinca, V.; Herisanu, N.

2011, XII, 396 p., Hardcover

ISBN: 978-3-642-22734-9
