## Part I Background Principles and Technical Development

|          |                                                                        |           |
|----------|------------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction and the Nature of Radiosurgery</b>                     | <b>3</b>  |
|          | Definitions of Radiosurgery                                            | 5         |
|          | Consequences of Changing Definitions of Radiosurgery                   | 6         |
|          | Non-neurosurgical Treatments and Fractionation                         | 6         |
|          | Microsurgery, Gamma Knife Surgery and Their Relationship to Each Other | 7         |
|          | Aims of This Book                                                      | 8         |
|          | References                                                             | 8         |
| <b>2</b> | <b>Principles of Stereotaxy</b>                                        | <b>9</b>  |
|          | Introduction                                                           | 9         |
|          | Principles                                                             | 10        |
|          | The Leksell System                                                     | 11        |
|          | Target Identification                                                  | 11        |
|          | Newer Localization Methods                                             | 13        |
|          | Modern Indications for Stereotaxy                                      | 15        |
|          | Conclusion                                                             | 15        |
|          | References                                                             | 16        |
| <b>3</b> | <b>Ionising Radiation and Its Effects on Living Tissue</b>             | <b>17</b> |
|          | Introduction                                                           | 17        |
|          | Radiophysics                                                           | 17        |
|          | Basic Concepts                                                         | 17        |
|          | Units                                                                  | 19        |
|          | Electromagnetic Radiation                                              | 21        |
|          | Particle Radiation                                                     | 22        |
|          | The Effect of Electromagnetic Radiation on Matter at the Atomic Level  | 23        |
|          | The Effect of Charged Particles on Matter                              | 25        |

|                                                                     |           |
|---------------------------------------------------------------------|-----------|
| Consequences of Radiation Induced Damage on Biological Tissue ..... | 28        |
| Early Effects .....                                                 | 28        |
| Radiation Injuries to Nucleic Acid Molecules .....                  | 29        |
| Response to Radiation Damage of DNA Molecules .....                 | 29        |
| References .....                                                    | 31        |
| <b>4 Biological Effects of Ionising Radiation .....</b>             | <b>33</b> |
| Introduction .....                                                  | 33        |
| Cell Survival Studies .....                                         | 33        |
| The Linear Quadratic Equation .....                                 | 34        |
| Mechanisms of Cellular Repair .....                                 | 35        |
| Different Factors Affecting the Effects of Radiation .....          | 38        |
| Biological Factors .....                                            | 38        |
| Radiation Factors .....                                             | 40        |
| Clinical Radiobiological Correlates .....                           | 43        |
| The Fate of the Normal Tissue .....                                 | 43        |
| The Fate of Irradiated Tumour Cells .....                           | 44        |
| References .....                                                    | 46        |
| <b>5 Ionising Radiation and Clinical Practice .....</b>             | <b>47</b> |
| Introduction .....                                                  | 47        |
| General Clinico/Pathological Principles .....                       | 47        |
| The Therapeutic Index .....                                         | 47        |
| Time Dose Relationships .....                                       | 48        |
| Early and Late Reactions .....                                      | 49        |
| Adverse Radiation Effects in the Brain .....                        | 50        |
| Severe Somatic Adverse Radiation Effects in the Brain .....         | 50        |
| Less Severe Somatic Adverse Radiation Effects                       |           |
| in the Brain After Gamma Knife Treatment .....                      | 51        |
| Genetic Adverse Effects Following Brain Irradiation .....           | 51        |
| References .....                                                    | 52        |
| <b>6 Gamma Knife Development from 1967 to 2010 .....</b>            | <b>53</b> |
| General Information .....                                           | 53        |
| Introduction .....                                                  | 53        |
| Preparatory Basic Research .....                                    | 53        |
| The First Patients .....                                            | 56        |
| The First Gamma Unit .....                                          | 56        |
| Early Experience .....                                              | 58        |
| The Second Gamma Unit .....                                         | 59        |
| The Third Gamma Unit (Gamma Knives U and B) .....                   | 60        |
| Fixation of the Patient to the Gamma Knife .....                    | 60        |
| Automatic Positioning .....                                         | 62        |

|                                                                                       |           |
