<b>Preface</b>	<b>vii</b>
<b>1 Extensions of Symmetric Operators</b>	<b>1</b>
1.1 Deficiency indices of symmetric operators . . . . .	1
1.2 The first von Neumann formula in the dense case . . . . .	4
1.3 Parametrization of symmetric and self-adjoint extensions. The second von Neumann formula . . . . .	5
1.4 The Cayley transform . . . . .	8
1.5 Non-densely defined symmetric operators and semi-deficiency subspaces . . . . .	10
1.6 Symmetric extensions of a non-densely defined symmetric operator . . . . .	14
1.7 Indirect decomposition and the Krasnoselskii formulas . . . . .	18
<b>2 Geometry of Rigged Hilbert Spaces</b>	<b>23</b>
2.1 The Riesz-Berezansky operator . . . . .	23
2.2 Construction of the operator generated rigging . . . . .	27
2.3 Direct decomposition and analogue of the first von Neumann's formula . . . . .	28
2.4 Regular and singular symmetric operators . . . . .	34
2.5 Closed symmetric extensions . . . . .	35
<b>3 Bi-extensions of Closed Symmetric Operators</b>	<b>45</b>
3.1 Bi-extensions . . . . .	45
3.2 Bi-extensions of $O$ -operators . . . . .	52
3.3 Self-adjoint and $t$ -self-adjoint bi-extensions . . . . .	54
3.4 The case of a densely defined symmetric operator . . . . .	61
<b>4 Quasi-self-adjoint Extensions</b>	<b>69</b>
4.1 Quasi-self-adjoint extensions of symmetric operators . . . . .	69
4.2 Quasi-self-adjoint bi-extension . . . . .	81
4.3 The $(*)$ -extensions and uniqueness theorems . . . . .	90

4.4	The $(*)$ -extensions in the densely-defined case . . . . .	104
4.5	Resolvents of quasi-self-adjoint extensions . . . . .	110
<b>5</b>	<b>The Livšic Canonical Systems with Bounded Operators</b>	<b>119</b>
5.1	The Livšic canonical system and the Brodskii theorem . . . . .	119
5.2	Minimal canonical systems . . . . .	122
5.3	Couplings of canonical systems . . . . .	124
5.4	Transfer functions of canonical systems . . . . .	129
5.5	Class $\Omega_J$ and its realization . . . . .	135
5.6	Finite-dimensional state-space case . . . . .	139
5.7	Examples . . . . .	143
<b>6</b>	<b>The Herglotz-Nevanlinna Functions and Rigged Canonical Systems</b>	<b>147</b>
6.1	The Herglotz-Nevanlinna functions and their representations . . .	147
6.2	Extended resolvents and resolution of identity . . . . .	150
6.3	Definition of an L-system . . . . .	161
6.4	Realizable Herglotz-Nevanlinna operator-functions. Class $N(R)$ . .	170
6.5	Realization of the class $N(R)$ . . . . .	176
6.6	Minimal realization and the theorem on bi-unitary equivalence . .	194
<b>7</b>	<b>Classes of realizable Herglotz-Nevanlinna functions</b>	<b>205</b>
7.1	Sub-classes of the class $N(R)$ and their realizations . . . . .	205
7.2	Class $\Omega(R, J)$ . The Potapov-Ginzburg Transformation . . . . .	211
7.3	Multiplication Theorems for $\Omega(R, J)$ classes . . . . .	214
7.4	Boundary triplets and self-adjoint bi-extensions . . . . .	224
7.5	The Krein-Langer $Q$ -functions and their realizations . . . . .	228
7.6	Examples . . . . .	233
<b>8</b>	<b>Normalized L-Systems</b>	<b>239</b>
8.1	Auxiliary canonical system . . . . .	239
8.2	Constant $J$ -unitary factor . . . . .	245
8.3	The Donoghue transform and impedance functions of scattering L-systems . . . . .	250
8.4	Normalized $(*)$ -extensions and normalized L-systems . . . . .	252
8.5	Realizations of $e^{izl}$ and $e^{il/z}$ as transfer functions of L-systems . .	256
<b>9</b>	<b>Canonical L-systems with Contractive and Accretive Operators</b>	<b>261</b>
9.1	Contractive extensions and their block-matrix forms . . . . .	261
9.2	Quasi-self-adjoint contractive extensions of symmetric contractions . . . . .	269
9.3	The Weyl-Titchmarsh functions of quasi-self-adjoint contractive extensions . . . . .	281
9.4	Canonical L-systems with contractive state-space operators . . . .	286

9.5	The restricted Phillips-Kato extension problem . . . . .	292
9.6	Bi-extensions of non-negative symmetric operators . . . . .	308
9.7	Accretive bi-extensions . . . . .	311
9.8	Realization of Stieltjes functions . . . . .	321
9.9	Realization of inverse Stieltjes functions . . . . .	334
<b>10</b>	<b>L-systems with Schrödinger operator</b>	<b>341</b>
10.1	( $*$ )-extensions of ordinary differential operators . . . . .	341
10.2	Canonical L-systems with Schrödinger operator . . . . .	344
10.3	Accretive and sectorial boundary problems for a Schrödinger operator . . . . .	349
10.4	Functional model for symmetric operator with deficiency indices (1,1) . . . . .	357
10.5	Accretive ( $*$ )-extensions of a Schrödinger operator . . . . .	361
10.6	Stieltjes functions and L-systems with accretive Schrödinger operator . . . . .	364
10.7	Inverse Stieltjes functions and systems with Schrödinger operator . . . . .	370
10.8	Stieltjes-like functions and inverse spectral problems for systems with Schrödinger operator . . . . .	378
10.9	Inverse Stieltjes-like functions and inverse spectral problems for systems with Schrödinger operator . . . . .	396
<b>11</b>	<b>Non-self-adjoint Jacobi Matrices and System Interpolation</b>	<b>413</b>
11.1	Systems with Jacobi matrices . . . . .	414
11.2	The Stone theorem and its generalizations . . . . .	417
11.3	Inverse spectral problems for finite dissipative Jacobi matrices . . . . .	424
11.4	Reconstruction of a dissipative Jacobi matrix from its triangular form . . . . .	427
11.5	System Interpolation and Sectorial Operators . . . . .	431
11.6	The Livšic interpolation systems in the Pick form . . . . .	436
11.7	The Nevanlinna-Pick rational interpolation with distinct poles . . . . .	446
11.8	Examples . . . . .	451
<b>12</b>	<b>Non-canonical Systems</b>	<b>453</b>
12.1	$F$ -systems: definition and basic properties . . . . .	455
12.2	Multiplication theorems for $F$ -systems . . . . .	460
12.3	Realizations in the case of a compactly supported measure . . . . .	464
12.4	Definitions of NCI-systems and NCL-systems . . . . .	470
12.5	NCI realizations of Herglotz-Nevanlinna functions . . . . .	474
12.6	Realization by NCL-systems . . . . .	480
12.7	Minimal NCL-realization . . . . .	487
12.8	Examples and non-canonical system interpolation . . . . .	490

<b>Bibliography</b>	<b>505</b>
<b>Index</b>	<b>525</b>

Conservative Realizations of Herglotz-Nevanlinna  
Functions

Arlinskii, Y.; Belyi, S.; Tsekanovskii, E.

2011, XVIII, 530 p., Hardcover

ISBN: 978-3-7643-9995-5

A product of Birkhäuser Basel
