Contents

1 Introduction 1

2 Modeling Cellular Dynamics 11
2.1 Ion Channels and Cellular Excitations 11
2.1.1 A Simple Open–Close Kinetics of a Channel Protein 13
2.2 First Encounter with Numerical Simulations of Ordinary Differential Equations 17
2.3 Gating of Ion Channels in the Hodgkin–Huxley Formulation 19
2.3.1 Electro-Chemical Potentials for Cell Membranes 25
2.3.2 Electric Circuit Model of Cell Membranes 29
2.4 Hodgkin–Huxley Formulation of Membrane Excitation 30
2.5 FitzHugh–Nagumo Model 38
2.5.1 More About Numerical Integrations of Ordinary Differential Equations 38
2.6 Examples from Cardiac Muscle Cell Models 42
2.7 Variety of Complex Dynamics of Ion Channels 61
2.8 Variety of Complex Dynamics of Cellular Excitations 69
2.9 Cellular Calcium Dynamics 73
2.10 Bridging Between Different Levels of Modeling: A Preliminary Example 76

3 Dynamics of Cellular Networks 83
3.1 Gap Junctions 83
3.2 Continuous Approximation and Reaction Diffusion Equations 85
3.2.1 Finite Difference Method for Reaction Diffusion Equations 87
3.2.2 Cable Equations and Compartment Models 87
3.2.3 Finite Element Method with Boundary Conditions for Active Transmission Lines 93
3.2.4 Excitation Conduction Through the Whole Heart 113
3.3 Synaptically Connected Neuronal Networks 115
3.3.1 Reciprocal Inhibition and Alternating Rhythms 121

4 Application of ISIDE to Create Models 125
4.1 Brief Introduction of ISML 125
4.2 Getting Started 126
4.3 Model Creations and Simulations on ISIDE 128
4.3.1 Hodgkin–Huxley Model 128
4.3.2 Modularity of a Model 130
4.3.3 Conductance Modules 132
4.3.4 Current Modules 136
4.3.5 Membrane Module 139
4.3.6 Add an External Stimulus Current Generator Model 139
4.3.7 Voltage Clamp Experiment 142
4.3.8 Replacement of Ionic Current Modules 143
4.4 Neural Network Model 146
4.4.1 Two-Coupled BVP Model 147
4.4.2 Three-Coupled FHN Model 155
4.4.3 Middle Scale Neuronal Network Model 162
4.5 Other Model Exchange Formats 180
4.5.1 From Cell to Intracellular Signaling 180
4.5.2 Yet Another Format 188
4.6 Integration of Morphological and Timeseries Data on an ISML Model 189
4.6.1 Visualization of ISML Models 190
4.6.2 PDEs Solved on Morphological Data 191

5 Key Concepts of *insilico*ML 195
5.1 Overview of Model Representation in ISML 195
5.2 Expressions Used in ISML 1.0 198
5.2.1 Modularity and Linkage Among Modules 198
5.2.2 Edge 200
5.2.3 Module 200
5.2.4 Port 201
5.2.5 Physical-Quantity 201
5.2.6 Capsulation 203
5.3 SBML–ISML Hybridization 203
5.4 Morphological Data and Mathematical Expressions 206
5.4.1 Morphology 207
5.4.2 Partial Differential Equation 210
5.5 Databasing, Tracking, and Relating Models 214
